Biological Transformation Reimund Neugebauer, 2020-09-11 The global population is expected to

rise to 9.8 billion by the year 2050 with everyone ultimately striving for prosperity. New methods must therefore be found to achieve more efficient production. Research to date shows that the biological inventory that has evolved its products, processes, principles, and tools can spur modern technology. The development of technological innovations based on biological concepts with the goal of particularly innovative and sustainable value creation today is collectively known as biological transformation. It results in highly functional products with striking properties that can be both manufactured and utilized in a resource-saving way. In terms of taking responsibility for the good of all people, biological transformation is therefore a path that applied research will have to take. The Fraunhofer Gesellschaft has recognized the developmental technology potential of biological transformation and sees it as its task not only to drive the relevant research forward but also to promote public awareness of the topic. Soybean Crop José Carlos Jiménez López, Julia Escudero Feliu, 2024 **21st Century**

Homestead: Nitrogen-Fixing Crops Stanley Bilello, 2016-10-10 21st Century Homestead Nitrogen Fixing Crops contains everything you need to stay up to date on nitrogen fixing crops for your sustainable farm or garden. Green Food Processing Techniques Farid Chemat, Eugene Vorobiev, 2019-07-26 Green Food Processing Techniques Preservation Transformation and Extraction advances the ethics and practical objectives of Green Food Processing by offering a critical mass of research on a series of methodological and technological tools in innovative food processing techniques along with their role in promoting the sustainable food industry. These techniques such as microwave ultrasound pulse electric field instant controlled pressure drop supercritical fluid processing extrusion lie on the frontier of food processing food chemistry and food microbiology and are thus presented with tools to make preservation transformation and extraction greener. The Food Industry constantly needs to reshape and innovate itself in order to achieve the social financial and environmental demands of the 21st century. Green Food Processing can respond to these challenges by enhancing shelf life and the nutritional quality of food products while at the same time reducing energy use and unit operations for processing eliminating wastes and byproducts reducing water use in harvesting washing and processing and using naturally derived ingredients. Introduces the strategic concept of Green Food Processing to meet the challenges of the future of the food industry. Presents innovative techniques for green food processing that can be used in academia and in industry in R D and processing. Brings a multidisciplinary approach with significant contributions from eminent scientists who are actively working on Green Food Processing techniques.
