Space Probes and Planetary Exploration William R. Corliss, 1965 Discusses the objectives and technology of unmanned spacecraft **Space Probes and Planetary Exploration** William R. Corliss, 1965 Discusses the objectives and technology of unmanned spacecraft **Probing the New Solar System** John Wilkinson, 2009-01-08 Exploration by space probes has revealed many fascinating details about Earth's planetary neighbours Today we stand on the threshold of the next phase of planetary exploration and knowledge with several space probe missions currently underway and others being planned Probing the New Solar System discusses the latest findings that have contributed to a changed understanding of the solar system and how the revised definition of a planet in 2006 by the International Astronomical Union affected this understanding Each chapter includes some historical information Did you know items of particular interest to readers and photographs of objects in the solar system showing newly discovered features of the planets their moons and of dwarf planets This is an up to date record of the many recent discoveries made about our solar system and other planetary systems using ground based and space probe technology It has been written for people interested in astronomy both professional and amateur as well as for students and educators Space Probes and Planetary Exploration William R. Corliss, 1965 **Deep Space Probes** Gregory L. Matloff, 2006-08-31 The Space Age is nearly 50 years old but exploration of the outer planets and beyond has only just begun Deep Space Probes Second Edition draws on the latest research to explain why we should explore beyond the edge of the Solar System and how we can build highly sophisticated robot spacecraft to make the journey Many technical problems remain to be solved among them propulsion systems to permit far higher velocities and technologies to build vehicles a fraction of the size of today's spacecraft Beyond the range of effective radio control robot vehicles for exploring deep space will need to be intelligent thinking craft able to make vital decisions entirely on their own Gregory Matloff also looks at the possibility for human travel into interstellar space and some of the immense problems that such journeys would entail This second edition includes an entirely new chapter on holographic message plaques for future interstellar probes a NASA funded project **Planetary Exploration** Arthur Smith, 1988 Exploring the Solar System R. Launius, 2012-12-28 Beginning in the early days of the Space Age well before the advent of manned spaceflight the United States followed soon by other nations undertook an ambitious effort to study the planets of the solar system The remarkable fruits of this research revolutionized the public's view of their celestial neighbors capturing the imaginations of people from all backgrounds like nothing else save the Apollo lunar missions From the first space probes to the most recent planetary rovers they have continually delivered impressive discoveries and reshaped our understanding of the cosmos Offering fascinating investigations into this crucial chapter in space history this collection of specially commissioned essays from leading historians opens new vistas in our understanding of the development of planetary science Planetary Exploration Horizon 2061 Michel Blanc, 2022-10-28 Planetary Exploration Horizon 2061 A Long Term Perspective for Planetary

Exploration synthesizes all the material elaborated and discussed during three workshops devoted to the Horizon 2061 foresight exercise. Sections cover the science of planetary systems, space missions to solar system objects, technologies for exploration and infrastructures and services to support the missions and to maximize their science return. The editors follow the path of the implementation of a planetary mission from the needed support in terms of navigation and communication through the handling of samples returned to Earth to the development of more permanent infrastructures for scientific human outposts on the Moon and Mars. This book also includes a special chapter entirely devoted to contributions from students and early career scientists, the Horizon 2061 generation, and a final chapter on important avenues for the actual implementation of the planetary missions coming out of our Dreams for Horizon 2061. International cooperation and the growing role and initiatives of private enterprise in planetary exploration. Provides a logical link between scientific questions and the technologies needed to thoroughly address them. Organized chapters present a logical road map of subjects while also stimulating a cross disciplinary understanding of the scientific and technical challenges of planetary exploration. Contains illustrations and tables that capture and synthesize knowledge of a broad readership. **Cassini Spacecraft Mission, Explore the Planet Saturn**, 1995 **Spacecraft that Explored the Inner Planets Venus and Mercury** Thomas Lund, 2023-07-03. A series of increasingly capable spacecraft were sent to explore the inner planets Venus and Mercury. The history of that planetary exploration is traced in this book along with the evolution of sophisticated spacecraft that unveiled long sought secrets of the planets. The spacecraft were ingenious and reflected the best efforts of talented people working with the available technology of the day. Additionally, this book showcases engineering involved in those capable machines. A consecutive series of 34 planetary spacecraft which span the time period 1961 to 2021 are described. This includes the unsuccessful missions of several early spacecraft that paved the way for a better understanding of Venus hostile environments. This book will describe many successful spacecraft sent to Venus by the Soviet Union and many successful spacecraft sent to Venus and to Mercury by the United States. The recent exploration of Venus by the European Space Agency's Venus Express and the Japanese spacecraft Akatsuki can also be found in this book. The author draws on over 50 years of experience on aircraft and spacecraft systems to tell the story of these planetary spacecraft. The spacecraft experience includes being the technical lead for the landing radars on the Surveyor and Apollo lunar landers as well as providing analyses for the rendezvous radar for the Space Shuttle. Practical engineering experience is augmented by Master's degrees in electrical engineering, physics, and business administration. **Space Probes** David Jefferis, 2009. With Space Probes Exploring Beyond Earth, young readers can learn what a space probe is, what planets have been explored, what is a rover, and what future missions are planned. Includes a How to Young Astronomer spread and Internet links that act as stepping stones to lead inquiring young minds further into the high tech universe of space exploration. Young readers will thrill at the exciting color photographs of deep space and the machines that probe it. *NASA Scientific and Technical*
