Cosmic Rays in Interplanetary Magnetic Fields I.N. Toptygin, 2012-12-06 Fast particles of natural or 10¹¹ cosmic rays have been used for a long time as an important source of astrophysical and geophysical information A study of cosmic ray spectra time variations abundances gradients and anisotropy provides a wealth of data on physical conditions in the regions of cosmic ray generation as well as in the media through which cosmic rays propagate Astrophysical aspects of cosmic ray physics have been considered in a number of monographs The most detailed seems to be *The Origin of*

Cosmic Rays by V L Ginzburg and S I Syrovatskij 1964 which is however concerned mainly with galactic cosmic rays The physics of the circumsolar space is discussed in this book only rather briefly Several other monographs have been devoted mostly to the physics of the interplanetary medium and cosmic rays in interplanetary space These include the books by Dorman 1963 1975a b Parker 1963 Dorman and Miroshnichenko 1968 The present monograph differs from the above mentioned books in two main aspects i It presents a unified theoretical approach to analys ng the properties of fast particles in interplanetary space based upon consideration of cosmic rays as a highly energetic component of the interplane ary plasma which makes use of the plasma physics methods to describe the behaviour of cosmic rays
