SPACE STATION #1 FRANK BELKNAP LONG., The International Space Station Robert C. Dempsey, 2017 Looks at the operations of the International Space Station from the perspective of the Houston flight control team under the leadership of NASA's flight directors who authored the book The book provides insight into the vast amount of time and energy that these teams devote to the development planning and integration of a mission before it is executed The passion and attention to detail of the flight control team members who are always ready to step up when things do not go well is a hallmark of NASA human spaceflight operations With tremendous support from the ISS program office and engineering community the flight control team has made the International Space Station and the programs before it a success

Long, 2017-11-12 **INTRIGUE IN EARTH'S OUTER ORBIT** Tremendous and glittering the Space Station floated up out of the Big Dark Lieutenant Corrison had come to see its marvels but he soon found himself entrapped in its unsuspected terrors For the grim reality was that some deadly outer space power had usurped control of the great artificial moon A lovely woman had disappeared passengers were being fleeced and enslaved and using fantastic disguises imposters were using the Station for their own mysterious ends Pursued by unearthly monsters and hunted with super scientific cunning Corrison struggles to unmask the mystery For upon his success depended his life his love and the future of Earth itself **The International Space Station** United States. What then When colonizing space NASA blazes the trails but private industry must build the roads For common citizens to inhabit space there must be a station in near Earth orbit only 400 miles high where dedicated commercial activities can take place It will be a hub of commerce where industrial scientists can perform chemistry and biology tourists can have lavish vacations solar power stations can be built and serviced and where satellites can be tested and deployed This is now within the grasp of several businesses that are determined to see this vision through The commercialization of low Earth orbit can free NASA and the other space agencies around the world to colonize the Moon and Mars In fact these agencies will be some of the first customers on an industrial facility in space The commercial space station can be the crucible from which a new economy is forged where better medicines cleaner energy sources stronger materials and wider human experiences can be realized These space stations are being deployed now They will do practical useful things in space for the common good of taxpayers They will be new tools in the fight to solve medical and environmental problems to come And they will provide jobs and tax revenue The 21st century will be an industrial space century where average citizens can participate as entrepreneurs or customers

The Continuing Story of The International Space Station Peter Bond, 2002-05 In this fascinating and well written text Peter Bond describes the development and evolution of space stations Particular emphasis is placed on the International Space Station beginning with the revolution that began in 1970 when Salyut 1 the world's first space station was sent into orbit by the Soviet Union Defeated in the race to the Moon the Soviets redirected their efforts towards the conquest of near Earth space In the next three decades their increasingly large and sophisticated structures rewrote the history books as cosmonauts continued to push back all space endurance records In clear and concise language the book explains how the human exploitation of low Earth orbit is about to change
