**A Feature-Centric View of Information Retrieval** Donald Metzler,2011-09-18 Commercial Web search engines such as Google Yahoo and Bing are used every day by millions of people across the globe With their ever growing refinement and usage it has become increasingly difficult for academic researchers to keep up with the collection sizes and other critical research issues related to Web search which has created a divide between the information retrieval research being done within academia and industry Such large collections pose a new set of challenges for information retrieval researchers In this work Metzler describes highly effective information retrieval models for both smaller classical data sets and larger Web collections In a shift away from heuristic hand tuned ranking functions and complex probabilistic models he presents feature based retrieval models The Markov random field model he details goes beyond the traditional yet ill suited bag of words assumption in two ways First the model can easily exploit various types of dependencies that exist between query terms eliminating the term independence assumption that often accompanies bag of words models Second arbitrary textual or non textual features can be used within the model As he shows combining term dependencies and arbitrary features results in a very robust powerful retrieval model In addition he describes several extensions such as an automatic feature selection algorithm and a query expansion framework The resulting model and extensions provide a flexible framework for highly effective retrieval across a wide range of tasks and data sets A Feature Centric View of Information Retrieval provides graduate students as well as academic and industrial researchers in the fields of information retrieval and Web search with a modern perspective on information retrieval modeling and Web searches

Jay GaBany,2015-11-05 This unique volume by two renowned astrophotographers unveils the science and history behind 100 of the most significant astronomical images of all time The authors have carefully selected their list of images from across time and technology to bring to the reader the most relevant photographic images spanning all eras of modern astronomical history Based on scientific evidence today we have a basic notion of how Earth and the universe came to be The road to this knowledge was paved with 175 years of astronomical images acquired by the coupling of two revolutionary technologies the camera and telescope With ingenuity and determination humankind would quickly embrace these technologies to tell the story of the cosmos and unravel its mysteries This book presents in pictures and words a photographic chronology of our aspiration to understand the universe From the first fledgling attempts to photograph the Moon planets and stars to the marvels of orbiting observatories that record the cosmos at energies beyond the range of human vision astronomers have always relied on images to break through to the next level of understanding A subset of these breakthrough images has profound significance in documenting some of the greatest milestones in modern astronomy **Jacaranda Science 10 for Western Australia, 5e LearnON and Print** Jacaranda,2025-10-10 Computerworld ,1992-01-20 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network **FROM THE QUANTUM TO THE MULTIVERSE** Don Hainesworth M.Sc. M.Eng.,2025-01-30 From the Quantum to the Multiverse Probing the Universe Quantum theory is among the great intellectual achievements of the 20th century and how this came about is interesting in itself Quantum theory was once widely held to resist any realist interpretation and to mark the advent of a postmodern science characterized by paradox uncertainty and the limits of precise measurement It seems that there is a realm of reality in the subatomic or micro physical domain The success of the Aspect Experiment in Paris in 1982 marked the end of the contemplation period with the first direct experimental proof that even

the most unusual aspects of QM are a literal description of the way things really are in the real world Further analyses of QM have led scientists to ponder the possibility of multiple dimensions Extra dimensions have changed the way physics think about the Universe And because the connections of extra dimensions in the Cosmos could connect to many more well established physics ideas extra dimensions are a way to approach older already verified facts about the Universe As a consequence of this physicists have postulated the real possibility of parallel universes
