Spaceflight Revolution:

Spaceflight Revolution David Ashford, 2002-12-10 A revolution in spaceflight is likely soon with the prospect of everyday access to orbit within fifteen years. Costly launch vehicles based on ballistic missiles will be replaced by spaceplanes using technology that exists today. In five years time a prototype could be built and with a further ten years of detailed development the design could approach airliner maturity reducing the cost of sending people into space some one thousand times to around US 20 000. Spaceplane development has in effect been suppressed by entrenched thinking and short term vested interests. But the present monopoly of large government space agencies is becoming unsupportable and the market that understands the very real opportunities for space travel will be reaching critical mass in the near future. This book examines these issues and shows why space tourism will one day become the single largest business in space and how astronomy and environmental science will be transformed by low cost access making possible instruments vastly larger than those of today.

Whereas the NACA was concerned primarily with aeronautical research conducted by

government employees in its own laboratories NASA would have a much broader charter that included not only aeronautical and space research but also the development and operation of various types of space vehicles including manned vehicles Within this new organization the Langley Aeronautical Laboratory became the Langley Research Center of NASA As a part of NASA Langley underwent many profound changes in program content organization and management and areas of personnel expertise Although aeronautical research continued in the NASA era research in support of such projects as Echo Scout Mercury Apollo and the Space Shuttle occupied a larger percentage of the Langley research effort as the years passed In addition Langley forged into new fields by assuming management responsibility for such large space projects as Lunar Orbiter and Viking This responsibility involved major contract activities and support of in house research New research facilities such as large vacuum tanks and high speed and high temperature air jets capable of simulating atmospheric entry from space were developed and constructed James Hansen s new book *Spaceflight Revolution* covers the turbulent seventeen year period from 1958 1975 in great and interesting detail With his usual thoroughness Hansen has based this book on careful analysis of hundreds of written records both published and unpublished as well as on numerous personal interviews with many of the key individuals involved in the great transition at Langley One Langley activity that was intentionally omitted from this study is aeronautical research which as the author mentions will hopefully be covered in a separate book *Spaceflight Revolution* is a very complete and well researched exposition and interpretation of a period of great change at the Langley Research Center The main events and trends are clearly and succinctly presented Although many who worked for Langley during the period covered may not agree entirely with some of Hansen s interpretations and conclusions sufficient information is given in the text references and notes to permit the reader to evaluate the work In any event anyone who ever worked for Langley or NACA NASA or who has any interest in the history of technology will find the book fascinating and thought provoking In addition anyone interested in the present and the future of NASA and the American space program will want to pay close attention to the insights found in his epilogue

Spaceflight and the Myth of Presidential Leadership Roger D. Launius, Howard E. McCurdy, 1997 Setting the tone for the collection NASA chief historian Roger D Launius and Howard McCurdy maintain that the nation s presidency had become imperial by the mid 1970s and that supporters of the space program had grown to find relief in such a presidency which they believed could help them obtain greater political support and funding Subsequent chapters explore the roles and political leadership vis vis government policy of presidents Eisenhower Kennedy Johnson Nixon Ford Carter and Reagan

Critical Issues in the History of Spaceflight Stephen J. Dick, Steven J. Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by

President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experience Amazon

The Dimming of Starlight Gonzalo Munévar, 2023 Galileo and Kepler dreamed of the possibility of space exploration although its reality was later underappreciated and even challenged by social ideological and scientific critics as a diversion from our problems on Earth The Dimming of Starlight tells the fascinating stories of how space exploration places us in unusual situations that force us to come up with new ideas about nature This strong connection between scientific exploration and scientific change makes us aware of a new panorama of problems dangers and opportunities that leads to new solutions and technologies that would have been unimaginable under old perspectives Thus the exploration of Venus led to the discovery of the destruction of Earth's Ozone layer This discovery will save hundreds of millions of lives in the coming centuries As we explore space we learn to protect our planet from catastrophe and all the while we change drastically our ideas about the nature of the universe With its account of serendipity and splendor the book invites readers on an exciting journey in which step by step we are shown the crucial importance of space exploration for humanity

The Development of Propulsion Technology for U.S. Space-Launch Vehicles, 1926-1991 J. D. Hunley, 2013-03-15 In this definitive study J D Hunley traces the program's development from Goddard's early rockets and the German V 2 missile through the Titan IVA and the Space Shuttle with a focus on space launch vehicles Since these rockets often evolved from early missiles he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology Focusing especially on the engineering culture of the program Hunley communicates this very human side of technological development by means of anecdotes character sketches and case studies of problems faced by rocket engineers He shows how such a highly adaptive approach enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science

Unique in its single volume coverage of the evolution of launch vehicle technology from 1926 to 1991 this meticulously researched work will inform scholars and engineers interested in the history of technology and innovation as well as those specializing in the history of space flight

Rockets and Revolution Michael G. Smith, 2014-12-01 Rockets and Revolution offers a multifaceted study of the race toward space in the first half of the twentieth century examining how the Russian European and American pioneers competed against one another in the early years to acquire the fundamentals of rocket science engineer simple rockets and ultimately prepare the path for human spaceflight Between 1903 and 1953 Russia matured in radical and dramatic ways as the tensions and expectations of the Russian revolution drew it both westward and spaceward European and American industrial capacities became the models to imitate and to surpass The burden was always on Soviet Russia to catch up enough to achieve a number of remarkable firsts in these years from the first national rocket society to the first comprehensive surveys of spaceflight Russia rose to the challenges of its Western rivals time and again transcending the arenas of science and technology and adapting rocket science to popular culture science fiction political ideology and military programs While that race seemed well on its way to achieving the goal of space travel and exploring life on other planets during the second half of the twentieth century these scientific advances turned back on humankind with the development of the intercontinental ballistic missile and the coming of the Cold War Purchase the audio edition
