Spatial Representation In Animals:

Spatial Representation in Animals Sue Healy, 1998 Movements may be anything from small displacements in the immediate environment to the long distance migration of salmon or swallows Spatial Representation in Animals Susan Healy, 2023 Our understanding of the way in which animals know how when and where to orient and navigate around their environment has grown greatly over the last decade Here the authors present reviews and speculate about future directions in the field **Body Representations, Peripersonal Space, and the Self: Humans, Animals, Robots** Matej Hoffmann, Alex Pitti, Lorenzo Jamone, Eszter Somogyi, Pablo Lanillos, 2020-07-22 *The Neural Circuit for Spatial Representation* Yasser Roudi, Lisa M. Giocomo, 2012-10-12 How do we find our way The discovery of medial entorhinal cortex grid cells in 2005 stimulated a wide variety of experimental theoretical and computational work aimed at elucidating the neural circuit underlying spatial representations in the entorhinal cortex However grid cells act in concert with place cells head direction cells and border cells each playing a part in the spatial navigation circuit The aim of this Research Topics is to solicit contributions from leading researchers in the field of spatial navigation and spatial memory to present new experimental data computational modeling or discussion on mechanisms underlying the neural encoding of space in the parahippocampal cortices *Spatial Schemas and Abstract Thought* Merideth Gattis, 2003 Proposes the means by which spatial structures might be adapted for nonspatial purposes and it considers alternatives to spatial coding as a basis for abstract thought **Robotics and Cognitive Approaches to Spatial Mapping** Margaret E. Jefferies, Wai-Kiang Yeap, 2008-01-10 This important work is an attempt to synthesize two areas that need to be treated in tandem The book brings together the fields of robot spatial mapping and cognitive spatial mapping which share some common core problems One would expect some cross fertilization of research between the two areas to have occurred yet this has begun only recently There are now signs that some synthesis is happening so this work is a timely one for students and engineers in robotics **Animal Cognition** H. L. Roitblat, H. S. Terrace, T. G. Bever, 2014-04-04 First published in 1984 With this volume we initiate a series of books in comparative cognition and neuroscience The presentations at the Harry Frank Guggenheim Conference June 2 4 1982 out of which the present volume grew showed that this field of enquiry into cognitive functioning and its neural basis had reached maturity **Spatial Cognition VI. Learning, Reasoning, and Talking about Space** Christian Freksa, Nora S. Newcombe, Peter Gärdenfors, Stefan Wölfl, 2008-09-19 This book constitutes the refereed proceedings of the International Conference on Spatial Cognition Spatial Cognition 2008 held in Freiburg Germany in September 2008 The 27 revised full papers presented together with 3 invited lectures were carefully reviewed and selected from 54 submissions The papers are organized in topical sections on spatial orientation spatial navigation spatial learning maps and modalities spatial communication spatial language similarity and abstraction concepts and reference frames as well as spatial modeling and spatial reasoning *Human Spatial Memory* Gary L. Allen, 2004-04-12 The chapters in Human

Spatial Memory Remembering Where present a fascinating picture of an everyday aspect of mental life that is as intriguing to people outside of academia as it is to scientists studying human cognition and behavior The questions are as old as the study of mind itself How do we remember where objects are located How do we remember where we are in relation to other places What is the origin and developmental course of spatial memory What neural structures are involved in remembering where How do we come to understand scaled down versions of places as symbolic representations of actual places Although the questions are old some of the answers in progress are new thanks to some innovative theorizing solid experimental work and revealing applications of new technologies such as virtual environments and brain imaging techniques This volume includes a variety of theoretical empirical and methodological advances that invite readers to make their own novel connections between theory and research Scholars who study spatial cognition can benefit from examining the latest from well established experts as well as milestone contributions from early career researchers This combination provides the reader with a sense of past present and future in terms of spatial memory research Just as important however is the value of the volume as a touchstone resource for researchers who study perception memory or cognition but who are not concerned primarily with the spatial domain All readers may find the fact that this volume violates the trend toward an ever narrowing specialization refreshing Chapters from cognitive psychologists are alongside chapters by developmentalists and neuroscientists results from field studies are just pages away from those based on fMRI during observation of virtual displays Thus the book invites integrative examination across disciplines research areas and methodological approaches

Spatial Representation Naomi Eilan, Rosaleen A. McCarthy, Bill Brewer, 1999 *Spatial Representation* presents original specially written essays by leading psychologists and philosophers on a fascinating set of topics at the intersection of these two disciplines They address such questions as these Do the extraordinary navigational abilities of birds mean that these birds have the same kind of grip on the idea of a spatial world as we do Is there a difference between the way sighted and blind subjects represent the world out there Does the study of brain injured subjects such as blind seers tell us anything about the working of normal spatial consciousness The essays are arranged into five sections each of which reflects a central area of research into spatial cognition and opens with a short introduction by the editors designed to facilitate cross disciplinary reading The volume as a whole offers a rich and compelling expression of the view that to advance our understanding of the way we represent the external world it is necessary to draw on both philosophical and psychological approaches

Hallam, Jean-Arcady Meyer, Jun Tani, 2008-06-28 This book constitutes the refereed proceedings of the 10th International Conference on Simulation of Adaptive Behavior SAB 2008 held in Osaka Japan in July 2008 The 30 revised full papers and 21 revised poster papers presented were carefully reviewed and selected from 110 submissions The papers are organized in topical sections on the animat approach to adaptive behaviour evolution navigation and internal world models perception and control learning and adaptation cognition emotion and behaviour

Picture Perception in Animals Joel Fagot, 2013-06-17 Animal researchers commonly present pictures to their subjects usually birds or monkeys in order to infer how natural objects are perceived and conceptualised or to discover the brain mechanisms underlying these abilities This unique book questions the premise of this experimental approach and asks whether or not pictures can be considered as ecologically valid and realistic stimuli for animals Leading researchers in comparative psychology and neuroscience address such questions as Can animals recognise objects of scenes in pictures despite variations in viewpoints How do animals perceive faces and Is there an equivalence in animals minds between pictures and the objects they represent The result is an authoritative and cutting edge survey of current knowledge in the field which underlines the advantages limits and risks of using pictures to infer cognitive abilities or brain mechanisms in animal studies *Picture Perception in Animals* will be essential reading for comparative psychologists anthropologists and neuroscientists working in picture perception

From Animals to Animats 3 Dave Cliff, 1994 August 8 12 1994 Brighton England From *Animals to Animats 3* brings together research intended to advance the front tier of an exciting new approach to understanding intelligence The contributors represent a broad range of interests from artificial intelligence and robotics to ethology and the neurosciences Unifying these approaches is the notion of animat an artificial animal either simulated by a computer or embodied in a robot which must survive and adapt in progressively more challenging environments The 58 contributions focus particularly on well defined models computer simulations and built robots in order to help characterize and compare various principles and architectures capable of inducing adaptive behavior in real or artificial animals Topics include Individual and collective behavior Neural correlates of behavior Perception and motor control Motivation and emotion Action selection and behavioral sequences Ontogeny learning and evolution Internal world models and cognitive processes Applied adaptive behavior Autonomous robots Hierarchical and parallel organizations Emergent structures and behaviors Problem solving and planning Goal directed behavior Neural networks and evolutionary computation Characterization of environments A Bradford Book

Kant and Animals John J. Callanan, Lucy Allais, 2020 This volume is devoted entirely to exploring the role of animals in the thought of Immanuel Kant Leading scholars address questions regarding the possibility of objective representation and intentionality in animals the role of animals in Kant's scientific picture of nature the status of our moral responsibilities to animals welfare and more

and adaptation and collective and social behaviour Visual Structures and Integrated Functions Michael A. Arbib, Jörg-Peter Ewert, 2012-12-06 This volume integrates theory and experiment to place the study of vision within the context of the action systems which use visual information This theme is developed by stressing a The importance of situating anyone part of the brain in the context of its interactions with other parts of the brain in subserving animal behavior The title of this volume emphasizes that visual function is to be viewed in the context of the integrated functions of the organism b Both the intrinsic interest of frog and toad as animals in which to study the neural mechanisms of visuomotor coordination and the importance of comparative studies with other organisms so that we may learn from an analysis of both similarities and differences The present volume thus supplements our studies of frog and toad with papers on salamander bird and reptile turtle rat gerbil rabbit and monkey c Perhaps most distinctively the interaction between theory and experiment

Cognition Catherine Thinus-Blanc, 1996 The Cognitive Map Tolman 1948 is a key notion in spatial processing studies It refers to high level spatial representations Although widely used this term remains ambiguous The aim of this book is two fold 1 to examine the most noteworthy studies in laboratory settings which have contributed during the last five decades to a better understanding of animal spatial representations 2 to provide some hints for future research Spatial tests designed by psychologists are useful tools for understanding the brain substrates of spatial memory Conversely brain treatments allow us to analyse the complex psychological mechanisms underlying spatial orientation Within this interdisciplinary context it is extremely important to take stock of a notion used and sometimes misused in cognitive neurosciences
