Spatial Cognition Brain Bases And Development:

Spatial Cognition Joan Stiles, Mark Kritchevsky, Ursula Bellugi, 1988 This book offers a unique opportunity to share the combined efforts of scientists from varied disciplines including cognitive and developmental psychology neuropsychology behavioral neurology and neurobiology in the process of interacting and exchanging ideas Spatial Cognition Joan

Stiles, Mark Kritchevsky, Ursula Bellugi, 2022 Looking at the ways humans perceive interpret remember and interact with events occurring in space this book focuses on two aspects of spatial cognition How does spatial cognition develop What is the relation between spatial cognition and the brain This book offers a unique opportunity to share the combined efforts of scientists from varied disciplines including cognitive and developmental psychology neuropsychology behavioral neurology and neurobiology in the process of interacting and exchanging ideas Based on a conference held at the Neuroscience Conference Center of the Salk Institute for Biological Studies this book explores current scientific trends seeking a biological basis for understanding the relationships among brain mind and behavior *The Visual Brain in Action* David Milner, Mel Goodale, 2006-10-12 First published in 1995 this book presents a model for understanding the visual processing underlying perception and action proposing a broad distinction within the brain between two kinds of vision conscious perception and unconscious online vision

The Geometries of Visual Space Mark Wagner, 2012-11-12 When most people think of space they think of physical space However visual space concerns space as consciously experienced and it is studied through subjective measures such as asking people to use numbers to estimate perceived distances areas angles or volumes This book explores the mismatch between perception and physical reality and describes the many factors that influence the perception of space including the meaning assigned to geometric concepts like distance the judgment methods used to report the experience the presence or absence of cues to depth and the orientation of a stimulus with respect to point of view The main theme of the text is that no single geometry describes visual space but that the geometry of visual space depends upon the stimulus conditions and mental shifts in the subjective meaning of size and distance In addition *The Geometries of Visual Space* contains philosophical mathematical and psychophysical background material looks at synthetic approaches to space perception including work on hyperbolic spherical and Euclidean geometries presents a meta analysis of studies that ask observers to directly estimate size distance area angle and volume looks at the size constancy literature in which observers are asked to adjust a comparison stimulus to match a variety of standards at different distances away discusses research that takes a multi dimensional approach toward studying visual space and discusses how spatial experience is influenced by memory While this book is primarily intended for scholars in perception mathematical psychology and psychophysics it will also be accessible to a wider audience since it is written at a readable level It will make a good graduate level textbook on space perception The Development of Language and Language Researchers Frank S. Kessel, 2013-12-16 First published in 1988 This is a collection of essays that were presented at or generated afterwards at a meeting on language acquisition

Society Development in April 1981 a symposium on The Development of Language and Language Researchers Whatever Happened to Linguistic Theory in Boston *Intelligence, Heredity and Environment* Robert J. Sternberg, Elena L. Grigorenko, 1997-01-28 The debate over nature versus nurture in relation to intelligence is not as clearly drawn as it was ten years ago when geneticists claimed that intelligence is innate while environmentalists claimed that culture is the major determining factor Although the debate has not been resolved it has been significantly refined Robert Sternberg and Elena Grigorenko address the roles and interaction of nature and nurture in Intelligence Heredity and Environment This book provides a comprehensive balanced current survey of theory and research on the origins and transmission of human intelligence The book is unique in the diversity of viewpoints it presents and its inclusion of the very most recent theories and findings It highlights the search for genes associated with specific cognitive abilities interactionist theories cultural relativism educational strategies developmental perspectives and fallacies of previous intelligence research **Language and Space** Paul Bloom, 1999 The 15 essays in this volume bring together research and theoretical viewpoints in the areas of psychology linguistics anthropology and neuroscience presenting a synthesis across these diverse domains Throughout authors address and debate each others arguments and theories Neuropsychological Assessment Muriel Deutsch Lezak, 2004 This revised text provides coverage of research and clinical practice in neuropsychology The 4th edition contains new material on tests assessment techniques neurobehavioral disorders and treatment effects *Sensory-Motor Organizations and Development in Infancy and Early Childhood* H. Bloch, B.I. Bertenthal, 1990-07-31 This book is the outcome of a Nato Workshop held in France in July 1989 The workshop was organized to examine current ideas about sensory motor organizations during human infancy and their development through early childhood The study of sensory motor development is experiencing a profound shift in scope focus methodology and theoretical foundations Many of these changes are quite new and not yet well covered in the literature We thought it would be useful for some of the leading researchers in this field to convene together and to compare notes and collectively to establish future directions for the field The reasons for a new conceptualization of sensory motor development are no doubt numerous but three are especially significant 1 One concerns a shift from studying either sensory or motor processing to investigation of the relations between the two 2 The second is connected to the new emphasis on action and its implications for goal directed and intentional behaviour extending over time 3 Lastly new theories and methodologies provide access to new tools for studying and conceptualizing the developmental process 1 One of the most enduring legacies of the behaviorist perspective has been a focus on the stimulus and the response to the exclusion of the relation between them Pick 1989 Historically this bias translated into a research agenda in which the investigator was concerned with either perceptual or motor competence but rarely the relation between them Cognitive and Linguistic Aspects of Geographic Space D.M. Mark, Andrew U. Frank, 2012-12-06 This book contains twenty eight papers by participants in the NATO Advanced Study Institute ASI on Cognitive and Linguistic Aspects of Geographic Space held in

Las Navas del Marqués Spain July 8 20 1990 The NATO ASI marked a stage in a two year research project at the U S National Center for Geographic Information and Analysis NCGIA In 1987 the U S National Science Foundation issued a solicitation for proposals to establish the NCGIA and one element of that solicitation was a call for research on a fundamental theory of spatial relations We felt that such a fundamental theory could be searched for in mathematics geometry topology or in cognitive science but that a simultaneous search in these two seemingly disparate research areas might produce novel results Thus as part of the NCGIA proposal from a consortium consisting of the University of California at Santa Barbara the State University of New York at Buffalo and the University of Maine we proposed that the second major Research Initiative two year multidisciplinary research project of the NCGIA would address these issues and would be called Languages of Spatial Relations The grant to establish the NCGIA was awarded to our consortium late in 1988

handbook reviewing the major paradigms used in each of the contributors research areas This volume considers the issues of neurophysiological aspects of spatial cognition the assessment of cognitive spatial deficits arising from neural damage in humans and animals and the observation of spatial behaviours in animals in their natural habitats This handbook should be of interest to new and old students alike The student new to spatial research can be brought up to speed with a particular range of techniques made aware of the background and pitfalls of particular approaches and directed toward useful sources For seasoned researchers the handbook provides a rapid scan of the available tools that they might wish to consider as alternatives when wishing to answer a particular spatial research problem

Knowledge under Construction Daniel Ness,Stephen J. Farenga,2007-03-26 Knowledge under Construction investigates how young children develop spatial geometric and scientific thinking skills particularly those associated with architecture Based on original research and analysis of videotapes of children s play with blocks the authors findings suggest that such play is anything but pointless Their conclusions fill in gaps in our current understanding of how children learn to think spatially and scientifically even while challenging portions of that understanding including some of Piaget s thesis about the primacy of topological space in children s learning A system of measurement developed to identify and categorize children s spontaneous behavior at play allows adults to observe patterns of behavior as children play and record the development of process skills and cognitive abilities enhancing our understanding of how children begin to learn about space and architectural relationships The book also examines the educational implications of our enhanced understanding One possible development is a new alternative way to measure cognitive abilities and development in children based on their
