Domain-Specific Program Generation Christian Lengauer, Don Batory, Charles Consel, Martin Odersky, 2004-11-18
Program generation holds the promise of helping to bridge the gap between application level problem solutions and efficient implementations at the level of today's source programs as written in C or Java. Thus program generation can substantially contribute to reducing production cost and time to market in future software production while improving the quality and stability of the product. This book is about domain specific program generation; it is the outcome of a Dagstuhl seminar on the topic held in March 2003. After an introductory preface by the volume editors, the 18 carefully reviewed, revised full papers presented are organized into topical sections on surveys of domain specific programming technologies, domain specific programming languages, tool support for program generation, domain specific techniques for program optimization.

Software Reuse: Advances in Software Reusability William B. Frakes, 2004-02-02
This book constitutes the refereed proceedings of the 6th International Conference on Software Reuse ICSR 6 held in Vienna, Austria, in June 2000. The 26 revised full papers presented were carefully reviewed and selected from numerous submissions. The book is divided into topical sections on generative reuse and formal description languages, object oriented methods, product line architectures, requirements reuse and business modeling components and libraries, and design patterns.

UML-Based Software Product Line Engineering with SMarty Edson Oliveira Jr., 2023-02-06
This book is about software product lines (SPLs) designed and developed taking UML diagrams as the primary basis, modeled according to a rigorous approach composed of an UML profile and a systematic process for variability management activities forming the Stereotype based Management of Variability (SMarty) approach. The book consists of five parts. Part I provides essential concepts on SPL in terms of the first development methodologies. It also introduces variability concepts and discusses SPL architectures, finishing with the SMarty approach. Part II is focused on the design verification and validation of SMarty SPLs, and Part III concentrates on the SPL architecture evolution based on ISO/IEC metrics, the System PLA method, optimization with the MOA4PLA method, and feature interaction prevention. Next, Part IV presents SMarty as a basis for SPL development, such as the M-SPLearning SPL for mobile learning applications, the PLeTs SPL for testing tools, the PlugSPL plugin environment for supporting the SPL life cycle, the SyMPLES approach for designing embedded systems with SysML, the SMartySPeM approach for software process lines, SPeRL, and re-engineering of class diagrams into an SPL. Eventually, Part V promotes controlled experimentation in UML based SPLs, presenting essential concepts on how to plan, conduct, and document experiments, as well as showing several experiments carried out with SMarty. This book aims at lecturers, graduate students, and experienced practitioners. Lecturers might use the book for graduate level courses about SPL fundamentals and tools; students will learn about the SPL engineering process, variability management, and mass customization; and practitioners will see how to plan the transition from single product development to an SPL based process, how to document inherent variability in a given domain, or how to

apply controlled experiments to SPLs High Confidence Software Reuse in Large Systems Hong Mei, 2008-05-08 This book constitutes the refereed proceedings of the 10th International Conference on Software Reuse ICSR 2008 held in Beijing China in May 2008 The 40 revised full papers presented together with 5 workshop summaries and 5 tutorials were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on architecture and reuse approaches high confidence and reuse component selection and reuse repository product line domain models and analysis service oriented environment components and services reuse approaches and frameworks as well as reuse approaches and methods **Human Centered Software Product Lines** Jean-Sébastien Sottet, Alfonso García Frey, Jean

Vanderdonckt, 2017-10-05 This book takes a unique HCI approach to the concept of Software Product Line SPL and discusses the peculiarities of human computer interaction not usually addressed in more traditional approaches SPL is based on industrial practices for defining a range of software products SPL design identifies commonalities and differences between the various software versions modelling and managing the software variability Recent research has focused on reconciling the different viewpoints of SPL and HCI and in particular emphasizing the specific variability of HCI and the management of complex SPL models that could benefit from HCI in terms of representation manipulation and visualization This edited volume includes research that addresses the SPL for HCI and HCI for SPL In putting together these two research streams the groundwork is laid for future research into this important area Both the HCI and the software engineering communities will find this book an invaluable resource **Enterprise Information Systems III** Joaquim Filipe, B. Sharp, P.

Miranda, 2002-03-31 The purpose of the 3rd International Conference on Enterprise Information Systems ICEIS was to bring together researchers engineers and practitioners interested in the advances and business applications of information systems The research papers published here have been carefully selected from those presented at the conference and focus on real world applications covering four main themes database and information systems integration artificial intelligence and decision support systems information systems analysis and specification and internet computing and electronic commerce Audience This book will be of interest to information technology professionals especially those working on systems integration databases decision support systems or electronic commerce It will also be of use to middle managers who need to work with information systems and require knowledge of current trends in development methods and applications

Generative Programming and Component Engineering Robert Glück, 2005-09-16 This book constitutes the refereed proceedings of the 4th International Conference on Generative Programming and Component Engineering GPCE 2005 held in Tallinn Estonia in September October 2005 The 25 revised full papers presented together with 2 tool demonstration papers were carefully selected from 86 initial submissions following a round of reviewing and improvement The papers which include three full invited papers are organized in topical sections on aspect oriented programming component engineering and templates demonstrations domain specific languages generative techniques generic programming meta programming
