Software Engineering and Knowledge Engineering: Theory and Practice Wei Zhang, 2012-06-30 2012 International Conference on Software Engineering Knowledge Engineering and Information Engineering SEKEIE 2012 will be held in Macau April 1 2 2012 This conference will bring researchers and experts from the three areas of Software Engineering Knowledge Engineering and Information Engineering together to share their latest research results and ideas This volume book covered significant recent developments in the Software Engineering Knowledge Engineering and Information Engineering field both theoretical and applied We are glad this conference attracts your attentions and thank your support to our conference We will absorb remarkable suggestion and make our conference more successful and perfect *Software Engineering and Knowledge Engineering: Theory and Practice* Yanwen Wu, 2012-01-16 The volume includes a set of selected papers extended and revised from the I2009 Pacific Asia Conference on Knowledge Engineering and Software Engineering KESE 2009 was held on December 19 20 2009 Shenzhen China Volume 1 is to provide a forum for researchers educators engineers and government officials involved in the general areas of Computer and Software Engineering to disseminate their latest research results and exchange views on the future research directions of these fields 140 high quality papers are included in the volume Each paper has been peer reviewed by at least 2 program committee members and selected by the volume editor Prof Yanwen Wu On behalf of this volume we would like to express our sincere appreciation to all of authors and referees for their efforts reviewing the papers Hoping you can find lots of profound research ideas and results on the related fields of Computer and Software Engineering **Theory and Practice of Computation** Shin-ya Nishizaki, Masayuki Numao, Merlin Suarez, Jaime Caro, 2020-12-10 This book provides a collection of papers from the Ninth Workshop on Computing Theory and Practice WCTP 2019 devoted to theoretical and practical approaches to computation which was organized by four top universities in Japan and the Philippines Tokyo Institute of Technology Osaka University the University of the Philippines Diliman and De La Salle University The proceedings provide a broad overview of recent research trends in computer science research in Asia particularly in these two countries The papers included in the proceedings focus on both theoretical and practical aspects of computations such as programming language theory modeling of software systems applications of machine learning empathic computing and various applications of information technology **Software Engineering with Computational Intelligence** Taghi M. Khoshgoftaar, 2012-12-06 The constantly evolving technological infrastructure of the modern world presents a great challenge of developing software systems with increasing size complexity and functionality The software engineering field has seen changes and innovations to meet these and other continuously growing challenges by developing and implementing useful software engineering methodologies Among the more recent advances are those made in the context of software portability formal verification techniques software measurement and software reuse However despite the introduction of some important and useful paradigms in the software engineering

discipline their technological transfer on a larger scale has been extremely gradual and limited For example many software development organizations may not have a well defined software assurance team which can be considered as a key ingredient in the development of a high quality and dependable software product Recently the software engineering field has observed an increased integration or fusion with the computational intelligence CI field which is comprised of primarily the mature technologies of fuzzy logic neural networks genetic algorithms genetic programming and rough sets Hybrid systems that combine two or more of these individual technologies are also categorized under the CI umbrella Software engineering is unlike the other well founded engineering disciplines primarily due to its human component designers developers testers etc factor The highly non mechanical and intuitive nature of the human factor characterizes many of the problems associated with software engineering including those observed in development effort estimation software quality and reliability prediction software design and software testing

Trends in Software Engineering Marvin Zelkowitz, 2001-07-04 Volume 54 presents six chapters on the changing face of software engineering the process by which we build reliable software systems We are constantly building faster and less expensive processors which allow us to use different processes to try and conquer the bug problem facing all developments how to build reliable systems with few errors at low or at least manageable cost The first three chapters of this volume emphasize components and the impact that object oriented design is having on the program development process a current hot topic The final three chapters present additional aspects of the software development process including maintenance purchasing strategies and secure outsourcing of scientific computations

Biodesulfurization in Petroleum Refining Nour Shafik El-Gendy, Hussein Mohamed Nabil Nassar, 2018-10-02 From basic tenets to the latest advances this is the most comprehensive and up to date coverage of the process of biodesulfurization in the petroleum refining industry Petroleum refining and process engineering is constantly changing No new refineries are being built but companies all over the world are still expanding or re purposing huge percentages of their refineries every year year after year Rather than building entirely new plants companies are spending billions of dollars in the research and development of new processes that can save time and money by being more efficient and environmentally safer Biodesulfurization is one of those processes and nowhere else it is covered more thoroughly or with more up to date research of the new advances than in this new volume from Wiley Scrivener Besides the obvious benefits to biodesulfurization there are new regulations in place within the industry with which companies will over the next decade or longer spend literally tens if not hundreds of billions of dollars to comply Whether for the veteran engineer needing to update his or her library the beginning engineer just learning about biodesulfurization or even the student in a chemical engineering class this outstanding new volume is a must have Especially it covers also the bioupgrading of crude oil and its fractions biodenitrogenation technology and application of nanotechnology on both biodesulfurization and biodenitrogenation technologies
