Sojourner An Insiders View Of The Mars Pathfinder Mission:

Sojourner Andrew Mishkin, 2004 Andrew Mishkin a senior systems engineer at the Jet Propulsion Laboratory and a leader of NASA's robotic program brings us this insider's look at the Mars Pathfinder probe that electrified the world's imagination One hundred twenty two million miles away from her controllers a sophisticated robot smaller than a microwave oven did what had never been done before explored the rocky red terrain of Mars Then six wheeled Sojourner beamed spectacular pictures of her one of a kind mission back to Earth And millions of people were captivated Now with the touch of an expert thriller writer Sojourner operations team leader Andrew Mishkin tells the inside human story of the Mars Pathfinder mission's feverish efforts to build a self guided offroading robot to explore the surface of the Red Planet With witty compelling anecdotes he describes the clash of temperamental geniuses the invention of a new work ethic the turf wars the chewing gum solutions to high tech problems the controlled chaos behind the strangely beautiful creation of an artificial intelligence and the exhilaration of inaugurating the next great age of space exploration *Lunar and Planetary Rovers* Anthony Young, 2007-07-05 The Wheels of Apollo and the Quest for Mars fills a need for a complete history of the Lunar Roving Vehicle used on Apollo 15 16 and 17 drawing on many photographs never before published It also tells the story of the robotic rovers used on Mars and concludes with a description of the new designs of rovers planned for The New Vision for Exploration now underway at NASA The book provides extensive quotes from the astronauts who drove the LRV on the Moon from interviews conducted especially for the book It also details new material from interviews of engineers and managers at the Jet Propulsion Laboratory covering the robotic rovers Sojourner Spirit and Opportunity The Foreword is written by David R Scott Commander of Apollo 15 Chapter 1 From Concept to Reality Chapter 2 Lunar Roving Vehicle Subsystems Chapter 3 Training for the Moon Chapter 4 To the Hadley Plains Chapter 4 Mysterious and Unknown Descartes Chapter 5 Destiny at Taurus Littrow Chapter Six The Quest for Mars Chapter Seven The New Vision of Exploration

Mission Control Michael Peter Johnson, 2015-10-18 Brave astronauts flaring rockets and majestic launches are only one side of the story of spaceflight Any mission to space depends on years if not decades of work by thousands of dedicated individuals on the ground These are the people whose voices offer a friendly link to Earth in the void of space whose hands maneuver rovers across the face of planets and whose skills guide astronauts home This book is a long overdue history of three major centers that have managed important missions since the dawn of the space age In Mission Control Michael Johnson explores the famous Johnson Space Center in Houston the Jet Propulsion Laboratory in Pasadena and the European Space Operations Centre in Darmstadt Germany each a strategically designed micro environment responsible for the operation of spacecraft and the safety of passengers He explains the motivations behind the location of each center and their intricate design He shows how the robotic spaceflight missions overseen in Pasadena and Darmstadt set these centers apart from Houston and compares the tracking networks used for different types of spacecraft Johnson argues that the type of

spacecraft and the missions they controlled not the nations they represented defined how the centers developed yet these centers ended up playing vital national roles as space technology became a battleground for international power struggles in the Cold War years and even after. The most visible part of a conflict that was just as real as the wars in Korea, Vietnam, and Afghanistan, and caused great global anxiety, mission control centers have served as symbols of national security in the public eye and pivotal links in the history of modern technology.

Exploring the Solar System R. Launius, 2012-12-28

Beginning in the early days of the Space Age, well before the advent of manned spaceflight, the United States followed soon by other nations undertook an ambitious effort to study the planets of the solar system. The remarkable fruits of this research revolutionized the public's view of their celestial neighbors, capturing the imaginations of people from all backgrounds like nothing else save the Apollo lunar missions. From the first space probes to the most recent planetary rovers, they have continually delivered impressive discoveries and reshaped our understanding of the cosmos. Offering fascinating investigations into this crucial chapter in space history, this collection of specially commissioned essays from leading historians opens new vistas in our understanding of the development of planetary science.

Working on Mars William J. Clancey, 2012

Beginning in 2004, a team of geologists and other planetary scientists did field science in a dark room in Pasadena, exploring Mars from NASA's Jet Propulsion Laboratory (JPL) by means of the remotely operated Mars Exploration Rovers (MER). Clustered around monitors, living on Mars, time painstakingly plotting each movement of the rovers and their tools, sensors, and cameras, these scientists reported that they felt as if they were on Mars themselves, doing field science. The MER created a virtual experience of being on Mars. This book examines how the MER has changed the nature of planetary field science. NASA cast the rovers Spirit and Opportunity as robotic geologists and ascribed machine initiative to remotely controlled actions. Clancey argues that the actual explorers were not the rovers but the scientists who imaginatively projected themselves into the body of the machine to conduct the first overland expedition of another planet. The author investigates how the design of the rover mission enables field science on Mars, explaining how the scientists and rover engineers manipulate the vehicle and why the programmable tools and analytic instruments work so well for them.

Into the Black Peter J. Westwick, 2008-10-01

In the decades since the mid 1970s, the Jet Propulsion Laboratory in Pasadena, California, has led the quest to explore the farthest reaches of the solar system. JPL spacecraft—Voyager, Magellan, Galileo, the Mars rovers, and others—have brought the planets into close view. JPL satellites and instruments also shed new light on the structure and dynamics of Earth itself while their orbiting observatories opened new vistas on the cosmos. This comprehensive book recounts the extraordinary story of the lab's accomplishments, failures, and evolution from 1976 to the present day. This history of JPL encompasses far more than the story of the events and individuals that have shaped the institution. It also engages wider questions about relations between civilian and military space programs, the place of science and technology in American politics, and the impact of the work at JPL on the way we imagine the place of humankind in the universe.

Robotic Exploration of the Solar System Paolo Ulivi, David M. Harland, 2009-01-29 Paolo Ulivi and David Harland provide in *Robotic Exploration of the Solar System* a detailed history of unmanned missions of exploration of our Solar System. As in their previous book *Lunar Exploration* the subject will be treated wherever possible from an engineering and scientific standpoint. Technical descriptions of the spacecraft of their mission designs and of instrumentations will be provided. Scientific results will be discussed in considerable depth together with details of mission management. The books will cover missions from the 1950s until the present day and some of the latest missions and their results will appear in a popular science book for the first time. The authors will also cover many unflown projects providing an indication of the ideas that proved to be unfulfilled at the time but which may still be proven and useful in the future. Just like *Lunar Exploration* these books will use sources only recently made available on the Soviet space program in addition to some obscure and rarely used references on the European space program. The project will deliver three volumes totaling over 1000 pages that will provide comprehensive coverage of the topic with thousands of references to the professional literature that should make it the first port of call for people seeking information on the topic.

For the Love of Mars Matthew Shindell, 2023-05-18 A tour of Mars in the human imagination from ancient astrologers to modern explorers. Mars and its secrets have fascinated and mystified humans since ancient times. Due to its vivid color and visibility its geologic kinship with Earth and its potential as our best hope for settlement Mars embodies everything that inspires us about space and exploration. *For the Love of Mars* surveys the red planet's place in the human imagination beginning with ancient astrologers and skywatchers and ending in our present moment of exploration and virtual engagement. National Air and Space Museum curator Matthew Shindell describes how historical figures across eras and around the world have made sense of this mysterious planet. We meet Mayan astrologer priests who incorporated Mars into seasonal calendars and religious ceremonies. Babylonian astrologers who discerned bad omens. Figures of the Scientific Revolution who struggled to comprehend it as a world. Victorian astronomers who sought signs of intelligent life. And twentieth and twenty-first century scientists who have established a technological presence on its surface. Along the way we encounter writers and artists from each of these periods who take readers and viewers along on imagined journeys to Mars. By focusing on the diverse human stories behind the telescopes and behind the robots we know and love Shindell shows how Mars exploration has evolved in ways that have also expanded knowledge about other facets of the universe. Captained by an engaging and erudite expert *For the Love of Mars* is a captivating voyage through time and space for anyone curious about Curiosity and the red planet.
