Solar Applications in Agriculture Robert N. Brewer, 1981 New Perspectives for Energy Savings in Agriculture V. Goedseels, E. van der Stuyft, U. Avermaete, H. Buis, Willeke Palz, 2012-12-06 In its continuing efforts to improve production and storage European agriculture and food industry consumes ever more energy Hence as was the case for all European sectors founded on intensive energy consumption agriculture was also severely affected by the shortages and price increases of conventional energy sources over the past decade The energy consciousness generated in this way led to a widespread consideration of the application of other renewable energy sources The potential applications in agriculture are however extremely diverse and this explains to a great extent the fragmentary nature and even in some cases the mediocre level of current research The objective of this book is therefore to guide the reader in a systematic way through the apparent chaos of operational data which are currently available on the subject matter thermal applications within agriculture of solar energy by means of solar collectors passive designs and storage devices While in volume I of this series H this area is assessed from a more general economic perspective this tome II takes a more detailed technical approach The results of this book were produced in the form of a European concerted action under the leadership of the Commission in Brussels All possible data were collected by national representatives in the EC member countries Coordinators were Professor V Goedseels and Mr E Van der Stuyft from the Katholieke Universiteit Leuven and Professor G

Solar Energy in Agriculture Blaine F. Parker, 1991 This is the 4th volume in an international energy reference book series aimed at bringing together in a concise form the basic principles and the most relevant data concerning both the efficient use of energy in agriculture and the food industry and alternative energy sources for agriculture The theme of this volume is solar energy applications in agriculture Since the 1960 s the major industrial nations have faced an energy crisis there is a realisation that fossil fuels exist in finite quantities In the 1970 s and 80 s deposits of CO₂ in the atmosphere have increased arguably resulting in an increase in global warming Utilisation of solar energy could contribute to the improvement of man's standard of living while helping to decrease the potential for disastrous earth warming The application of solar energy in agriculture is in the main environmentally benign The purpose of this volume is to assist the solar energy system designer in understanding the principles of solar energy to provide conceptual designs which are useful as application examples and to provide specific equations and data for the design of specific applications
