

## Fracture Mechanics of Advanced Materials

ONR has traditionally played a leading role in supporting fundamental and applied research on nonlinear and dynamic fracture mechanics. The program continues to be unique within the solid mechanics community in the quality of research and in the effectiveness of interactions among ONR contractors. The program has broadened its scope from primary emphasis on fracture phenomena in metals to coverage of a wide spectrum of advanced materials and composites. Because low toughness limits the applicability of many classes of advanced materials, *the panel sees a continuing need for fundamental research on the relationship between microstructure and toughness.* Interfacial fracture mechanics is key to understanding the behavior of advanced materials systems such as composite materials, and this topic merits increased attention. *The panel recommends an increased level of effort in fracture mechanics as applied to advanced materials such as composites, especially under compressive loading.* The work should be examined for its impact on structural design practices and in the selection and evaluation of new engineered materials. *Recent concerns about the toughness and fatigue resistance of weld zones in high-strength HY-series steels warrant some research attention as well.*

## Quantitative Nondestructive Evaluation

Quantitative nondestructive evaluation (NDE) as a developing body of theoretical knowledge and experimental procedure warrants continued support. The area of ultrasonics—including acoustic emission, reflection, transmission, and scattering—is closely linked to solid mechanics because it provides results that can be directly related to the accumulation of damage in advanced materials and it is especially useful in characterizing the fracture, debonding, and delamination of composites. *The NDE of thick-section composites to ascertain the initial state and history of damage accumulation by ultrasonic, thermographic, and radiographic means continues to be an important research topic.* Advances in image processing are needed to enhance the correlation of the mapping of damage location, initiation, and growth patterns to the predictions based on micromechanical models of composite fracture.

## FLUID MECHANICS

The Navy's need for understanding and development in the domain of fluid mechanics continues to increase with time. The difficulties associated with the ubiquitous influence of turbulence continue to restrict progress; opportunities exist for progress in active flow control, and particular phenomena such as fire and wake interactions require serious attention.

In the following paragraphs the panel addresses fire research, flow simulation, active control, and turbulence.

## **Solid Mechanics Research For Quantitative Nondestructive Evaluation:**

**Solid mechanics research for quantitative non-destructive evaluation** Jan D. Achenbach, Y. Rajapakse, 2012-12-06  
Within the Solid Mechanics Program at the Office of Naval Research ONR our primary mission is to establish a basic research program which addresses the fundamental issues in solid mechanics where a clear scientific understanding is lacking. Our approach involves first identifying the various scales at which material and structural response and failure occur. Within each level of behavior we address the basic mechanical phenomena for which a clear physical description is not available. ONR's program emphasizes experimental research to identify and quantify the interacting behavior and response mechanisms. Theoretical and computational approaches are developed to explain the details of the physical processes and to establish the technology necessary to control the thermomechanical behavior of materials and structures. Within the Department of Defense it is a natural evolution that all new systems must generally operate in more demanding environments than the systems they replace. Thus structural designers are pushed towards lighter weight precision structures utilizing new materials. In such an environment structural design margins simultaneously shrink and become more critical. Such trends make it essential that a well founded scientific base for the nondestructive detection and assessment of subcritical flaws in structural materials and structures exist. Within the ONR Solid Mechanics Program we are interested in both the identification of flaws and assessment of their degree of criticality.

**Solid Mechanics Research for Quantitative Non-Destructive Evaluation** J. D. Achenbach, NORTHWESTERN UNIV EVANSTON IL DEPT OF CIVIL ENGINEERING., 1987. Non destructive evaluation NDE procedures play an important role in materials processing as well as in subsequent material testing product design analysis of service life expectancy manufacturing and quality control of manufactured products. They are also essential to on line monitoring of the integrity of structural elements and complex systems. Rational accept and reject criteria should be based on NDE tests. Critical safety efficiency and operational features of large scale structures depend on adequate NDE capabilities. Review of Progress in Quantitative Nondestructive Evaluation Donald O. Thompson, Dale E. Chimenti, 2013-12-01. This volume Parts A and B contains the edited papers presented at the annual Review of Progress in Quantitative Nondestructive Evaluation held at Bowdoin College Brunswick ME on July 24-28 1989. The Review was organized by the Center for Advanced NDE at the Ames Laboratory of the U S Department of Energy in cooperation with the Office of Basic Energy Sciences USDOE and the

Materials Laboratory at Wright Patterson Air Force Base The statistics for the 1989 Review of Progress in QNDE include a total of over 460 participants from the U S and nine foreign countries who presented some 325 papers Over the years this conference has grown into one of the largest most significant gatherings of NDE researchers and engineers in the world The meeting was divided into 35 sessions with as many as four sessions running concurrently and covering all stages of NDE development from basic research investigations to early engineering applications and all methods of inspection science from ultrasonics to x ray tomography The Editors have organized the papers in the Proceedings according to topical subject headings rather than in the original order of presentation This rearrangement yields a more user friendly reference work and follows a pattern now familiar to regular attendees of the Review Some changes in the headings and their subcategories have been introduced to accommodate dynamic evolution of the field as we observe it Scientific and Technical Aerospace Reports ,1995 **The Evaluation of Materials and Structures by Quantitative Ultrasonics** J.D. *Nondestructive Materials Characterization* Norbert G. H. Meyendorf,Peter B. Nagy,Stanislav I. Rokhlin,2013-11-21 Nondestructive Evaluation NDE becomes a key discipline for modern technology Information about materials defects and properties is significant to guarantee reliability of a product and avoid fatal accidents For instance technologies with high safety requirements like aviation automotive and energy production are driving forces for NDE Keeping in mind that aging of the infrastructure is an issue in all industrial countries and that for example an aircraft can have a lifetime of several decades poses new challenges for NDE and especially nondestructive materials characterization Besides the traditional in field applications NDE becomes more and more a tool to study materials degradation processes and to provide engineers with input data for sophisticated models describing materials behavior and the life of components At present this marriage of NDE and materials modeling shows significant success in predicting damage progression corrosion fatigue and thus an

enhancement of availability and reliability of components and complete aircraft This book will give a snapshot of the present research in materials characterization of aging aircraft Methods considered are x ray ultrasonic optical and thermal techniques and in particular techniques with high spatial resolution to detect and quantify early stages of degradation or to characterize materials microstructure Every chapter briefly describes the basics and the principles of one NDE method under consideration Discussing recent research results by applying these methods completes the chapters The readers will get an overview of the present state of the art of materials characterization techniques **Applied Mechanics Reviews** ,1985
