Solid Surfaces Proc Of The International:

Physics of Solid Surfaces 1981: Symposium Proceedings (Studies in Surface Science and Catalysis) ,2000-04-01

Physics of Solid Surfaces 1981 Symposium Proceedings Studies in Surface Science and Catalysis Photochemistry on Solid Surfaces Takeshi Matsuura,M. Anpo,1989-06-01 The latest developments in photochemistry on solid surfaces i e photochemistry in heterogeneous systems including liquid crystallines are brought together for the first time in a single volume Distinguished photochemists from various fields have contributed to the book which covers a number of important applications molecular photo devices for super memory photochemical vapor deposition to produce thin layered electronic semiconducting materials sensitive optical media the control of photochemical reactions pathways etc Photochemistry on solid surfaces is now a major field and this book which provides an up to date and comprehensive overview of the subject will be of interest to a wide range of readers Spillover and Mobility of Species on Solid Surfaces A. Guerrero-Ruiz,I.

Rodriguez-Ramos,2001-08-02 Spillover and Mobility of Species and Solid Surfaces collects the papers which were presented at the Fifth International Conference Spillover either as oral or poster contributions as well as the summaries of the invited lectures This congress and its publication in the Studies on Surface Science and Catalysis series follow the tradition of previous conferences on spillover initiated in Lyon 1983 and continued in Leipzig 1989 Kyoto 1993 and Dalian 1997 For the fifth conference held in S L el Escorial Madrid the organising committee has attempted to compile representative contributions which illustrate the advances in understanding the spillover phenomenon since 1997 Spillover is a process taking place during the interface of gas reactant molecules mainly hydrogen and oxygen on solid surfaces However different contributions to the more general area of the chemistry at surfaces related with the mobility and migration of species diffusion through membranes fuel cell catalysts etc have also been included In fact the title of the present volume summarizes this attempt to extend the conference topics towards dynamics at surfaces Among the 70 contributions received the 56 accepted papers were selected on the basis of the reports of at least two international reviewers according to standards comparable to those applied for other specialised journals These papers are from 21 different countries

Equilibria and Dynamics of Gas Adsorption on Heterogeneous Solid Surfaces W.A. Steele,G. Zgrablich,W.

Rudzinski,1996-12-17 The fact that the surfaces of real solids are geometrically distorted and chemically non uniform has long been realized by the scientists investigating various phenomena occurring on solid surfaces Even in the case when diffraction experiments show a well organized bulk solid structure the surface atoms or molecules will usually exhibit a much smaller degree of surface organization In addition to the results obtained from electron diffraction this can be seen in the impressive images obtained from STM and AFM microscopies This geometric and chemical disorder is the source of the energetic heterogeneity for molecules adsorbing on real solid surfaces Hundreds of papers have been published showing that this heterogeneity is a major factor in determining the behaviour of real adsorption systems Studies of adsorption on

energetically heterogeneous surfaces have proceeded along three somewhat separate paths with only minor coupling of ideas. One was the study of adsorption equilibria on heterogeneous solid surfaces. The second path was the study of time evolution of adsorption processes such as surface diffusion or adsorption-desorption kinetics on heterogeneous surfaces, and the third was the study of adsorption in porous solids or more generally adsorption in systems with limited dimensions. The present monograph is a first attempt to provide a synthesis of the ways that surface geometric and energetic heterogeneities affect both the equilibria and the time evolution of adsorption on real solids. The book contains 17 chapters written by a team of internationally recognized specialists, some of whom have already published books on adsorption.

Exoemission from Processed Solid Surfaces and Gas Adsorption Yoshihiro Momose, 2022-11-24. This book focuses on the surface activity of electron emission (EE). Prior to protective painting, a steel surface is usually grit blasted or sandblasted to remove scale and contaminants and to roughen the surface. This book emphasizes that such surface treatment causes EE, increasing the strength of paint adhesion. Introduced here are the experimental results of thermally assisted photoelectron emission (TAPE) and tribo-stimulated rubbing electron emission (TriboEE) from practical metals after different kinds of surface treatment processes. A detailed description is given of how Arrhenius activation energies relating to electron transfer through the surface overlayer and also the energy levels of electrons trapped in the overlayer can be obtained and how TAPE and TriboEE data can be influenced by the chemical properties of that overlayer. This book is composed of four parts: I. Surface treatment processes; II. The principle of EE analysis used for practical surfaces; III. Materials and methods of EE and X-ray photoelectron spectroscopy (XPS); IV. EE and XPS characteristics of practical surfaces. In the last part, the EE and XPS results for metals, semiconductors, and carbon materials are drawn from the author's own publications. The book will be useful for researchers engaging in surface treatment processes of various materials.

Treatise on Solid State Chemistry N. Hannay, 2012-12-06. The last quarter century has been marked by the extremely rapid growth of the solid state sciences. They include what is now the largest subfield of physics, and the materials engineering sciences have likewise flourished. And playing an active role throughout this vast area of science and engineering have been very large numbers of chemists. Yet even though the role of chemistry in the solid state sciences has been a vital one and the solid state sciences have in turn made enormous contributions to chemical thought, solid state chemistry has not been recognized by the general body of chemists as a major subfield of chemistry. Solid state chemistry is not even well defined as to content. Some, for example, would have it include only the quantum chemistry of solids and would reject thermodynamics and phase equilibria; this is nonsense. Solid state chemistry has many facets, and one of the purposes of this Treatise is to help define the field. Perhaps the most general characteristic of solid state chemistry, and one which helps differentiate it from solid state physics, is its focus on the chemical composition and atomic configuration of real solids and on the relationship of composition and structure to the chemical and physical properties of the solid. Real solids are usually extremely complex and exhibit almost

infinite variety in their compositional and structural features Future Opportunities in Catalytic and Separation Technology M. Misono, Y. Moro-oka, S. Kimura, 1990-01-22 The production of useful materials and the removal of polluting substances are fundamental to chemical technology and in this respect catalytic and separation processes play essential roles In order to cope with increasing demands to find solutions for the shortage of natural resources and global environmental pollution rapid and significant progress in the technology is required This book results from the successful seminar on Selective Reactions and Separation held at Oiso Japan in February 1988 The seminar was organised by ASPRONC the Association for the Progress of New Chemistry as the fourth in a series of seminars on Frontier Technology ASPRONC was inaugurated in 1986 and its membership comprises major companies in the chemical industry and various other sectors interested in chemistry The aim of this seminar was to explore the frontiers of catalytic and separation technology and to discuss the requirements for its future development The many interesting lectures and active discussions which resulted stimulated the editors to prepare this book Each lecturer has written a chapter which represents a significantly revised and extended version of his original lecture The book will appeal to many readers and will undoubtedly help to make a positive contribution to the future development of chemical technology Keynotes in Energy-Related Catalysis S. Kaliaguine, 2011-09-22 Catalysis by solid acids which includes modified zeolites is of special relevance to energy applications Acid catalysis is highly important in modern petroleum refining operations large scale processes such as fluid catalytic cracking catalytic reforming alkylation and olefin oligomerization rely on the transformation of hydrocarbons by acid catalysts Modified zeolites are therefore essential for the improvement of existing processes and for technical innovations in the conversion of crude There can be little doubt that zeolite based catalysts will play a major role in the future management of fossil fuels and biomass and this book is intended to contribute to tomorrow's achievements in this area Each chapter presents the personal views of an expert or a small group of experts on the current state of the art and on the trends in his their field likely to lead to important developments The presentation of these various keynotes in one volume will provide inspiration to the reader interested in the development of zeolite based catalysts for energy applications and in particular will suggest to the new comer in the field of catalyst design methods to develop his own original orientations **Third World Congress on Oxidation Catalysis** S.T. Oyama, A.M. Gaffney, J.E. Lyons, R.K. Grasselli, 1997-09-12 The overall theme of the 3rd World Congress is Atom Efficient Catalytic Oxidations for Global Technologies This theme was chosen to stimulate the participants to report their findings with an emphasis on conserving valuable material in their catalytic transformations as well as conserving energy in an environmentally responsible manner Progress towards this stated goal is substantial as evidenced by the tremendous response of the community in their participation of quality publications compiled in these Proceedings of the Congress The subjects presented span a wide range of oxidation reactions and catalysts These include the currently important area of lower alkane oxidation to the corresponding olefins unsaturated aldehydes acids and nitriles The

four featured lectures and seven plenary lectures constitute the general background and overview of the subject matter at hand The 104 contributed papers and 13 poster manuscripts summarized in this compendium probe new avenues to achieve catalytically efficient oxidation reactions for the future needs of mankind in a global environment Natural Gas Conversion
A. Holmen, K.-J. Jens, S. Kolboe, 1991-05-27 These proceedings reflect the extensive fundamental and applied research efforts that are currently being made on the conversion of gas in particular on the direct conversion of methane The Symposium in Oslo focused on the following topics Direct conversion of methane Fischer Tropsch chemistry methanol conversion and natural gas conversion processes The main aim was to present the state of the art and progress currently being made within each of these areas The book contains the papers presented and includes plenary lectures short communications and posters The papers will be of interest to scientists and engineers working in the field of gas conversion transportation fuels primary petrochemicals and catalysis
