Library,1967 **Cosmology's Century** P. J. E. Peebles,2020-06-02 From Nobel Prize winning physicist P J E Peebles the story of cosmology from Einstein to today Modern cosmology began a century ago with Albert Einstein s general theory of relativity and his notion of a homogenous philosophically satisfying cosmos Cosmology s Century is the story of how generations of scientists built on these thoughts and many new measurements to arrive at a well tested physical theory of the structure and evolution of our expanding universe In this landmark book one of the world s most esteemed theoretical cosmologists offers an unparalleled personal perspective on how the field developed P J E Peebles was at the forefront of many of the greatest discoveries of the past century making fundamental contributions to our understanding of the presence of helium and microwave radiation from the hot big bang the measures of the distribution and motion of ordinary matter and the new kind of dark matter that allows us to make sense of these results Taking readers from the field s beginnings Peebles describes how scientists working in independent directions found themselves converging on a theory of cosmic evolution interesting enough to warrant the rigorous testing it passes so well He explores the major advances some inspired by remarkable insights or perhaps just lucky guesses as well as the wrong turns taken and the roads not explored He shares recollections from major players in this story and provides a rare inside look at how science is really done A monumental work Cosmology s Century also emphasizes where the present theory is incomplete suggesting exciting directions for continuing research Scientific and Technical Aerospace Reports ,1989 *Daily Report, Foreign Radio Broadcasts* United States. Central Intelligence Agency,1962 The American Bibliography of Russian and East European Studies ,1962 **The Physics of Inertial Fusion** Stefano Atzeni,Jürgen Meyer-ter-Vehn,2004-06-03 This book is on inertial confinement fusion an alternative way to produce electrical power from hydrogen fuel by using powerful lasers or particle beams It involves the compression of tiny amounts micrograms of fuel to thousand times solid density and pressures otherwise existing only in the centre of stars Thanks to advances in laser technology it is now possible to produce such extreme states of matter in the laboratory Recent developments have boosted laser intensities again with new possibilities for laser particle accelerators laser nuclear physics and fast ignition of fusion targets This is a reference book for those working on beam plasma physics be it in the context of fundamental research or applications to fusion energy or novel ultra bright laser sources The book combines quite different areas of physics beam target interaction dense plasmas hydrodynamic

implosion and instabilities radiative energy transfer as well as fusion reactions Particular attention is given to simple and useful modelling including dimensional analysis and similarity solutions Both authors have worked in this field for more than 20 years They want to address in particular those teaching this topic to students and all those interested in understanding the technical basis Library Journal ,1964-10 **Airman** ,1963 *Translations from Kommunist* ,1969 The Very First Light John Boslough,John Mather,2008-10-20 In the early 1990s a NASA led team of scientists changed the way we view the universe With the COBE Cosmic Background Explorer project they showed that the microwave radiation that fills the universe must have come from the Big Bang effectively proving the Big Bang theory beyond any doubt It was one of the greatest scientific findings of our generation perhaps of all time In The Very First Light John Mather one of COBE s leaders and science writer John Boslough tell the story of how it was achieved A gripping tale of big money bigger egos tense politics and cutting edge engineering The Very First Light offers a rare insider s account of the world of big science The Whole Truth P. J. E. Peebles,2022-08-02 From the Nobel Prize winning physicist a personal meditation on the quest for objective reality in natural science A century ago thoughtful people questioned how reality could agree with physical theories that kept changing from a mechanical model of the ether to electric and magnetic fields and from homogeneous matter to electrons and atoms Today concepts like dark matter and dark energy further complicate and enrich the search for objective reality The Whole Truth is a personal reflection on this ongoing quest by one of the world s most esteemed cosmologists What lies at the heart of physical science What are the foundational ideas that inform and guide the enterprise Is the concept of objective reality meaningful If so do our established physical theories usefully approximate it P J E Peebles takes on these and other big questions about the nature of science drawing on a lifetime of experience as a leading physicist and using cosmology as an example He traces the history of thought about the nature of physical science since Einstein and succinctly lays out the fundamental working assumptions Through a careful examination of the general theory of relativity Einstein s cosmological principle and the theory of an expanding universe Peebles shows the evidence that we are discovering the nature of reality in successive approximations through increasingly rigorous scrutiny A landmark work The Whole Truth is essential reading for anyone interested in the practice of science Scientific Information Report United States.
