cases became part of food systems as it added a mode of preservation and improved the food quality that was preferred by each community. This is how the early genesis of fermented foods from grains, fruits and vegetables to animal meats and milk products became an integral part of early civilizations over 4000 years ago and has now carried over and further developed across many countries in every region of the world. The foundations of these food fermentations are now an integral part of modern food advances as preferred food substrates and the microbial interactions that drive the metabolic processes in defined food matrixes are being scientifically advanced. This book focuses on bringing together diverse emergences and advancements of fermented foods across different regions of the world and how the metabolic processes associated with fermentation in several cases add health relevant functional qualities across different food matrixes. This book contains 26 chapters from the Americas, Africa, Europe and Asia bringing together the fermentation processes of diverse food substrates and their microbial processing and in several cases providing health targeted functional benefits. Key Features: Discusses the rationale and basis of fermented food systems from across 26 diverse regions of the world with examples from the Americas, Asia, Europe and Africa. Presents historical plant and animal food substrates and the metabolic processes of their fermentation across traditions of a range of countries. Covers traditional food fermentations across diverse food substrates that have potentially health relevant functional benefits. Reflects and presents the role of historical cultural and traditional food concepts of a diverse range of countries with many novel examples and how they have influenced health relevant functional benefits. Discusses the relevance of metabolic concepts of fermented and functional foods in advancing healthy food concepts. This book is important for food scientists, nutritionists and the health care sector but beyond this it is also relevant for a wider global audience interested in a holistic health approach from food systems where examples of fermentation experience can inform new natural processing strategies to improve food quality and health. *Asian*

Noomhorm, Imran Ahmad, Anil Kumar Anal, 2014-03-11 Functional foods are foods which contain bioactive components either from plant or animal sources which can have health benefits for the consumer over and above their nutritional value. Foods which have antioxidant or cancer combating components are in high demand from health conscious consumers. Much has been made of the health giving qualities of fruits and vegetables in particular. Conversely, foods which have been processed are suffering an image crisis with many consumers indiscriminately assuming that any kind of processing robs food of its natural goodness. To date, there has been little examination of the actual effects, whether positive or negative, of various types of food processing upon functional foods. This book highlights the effects of food processing on the active ingredients of a wide range of functional food materials with a particular focus on foods of Asian origin. Asian foods, particularly herbs, are becoming increasingly accepted and demanded globally with many Western consumers starting to recognize and seek out their health giving properties. This book focuses on the extraction of ingredients from materials which in the West are seen as alternative, such as flour from soybeans instead of wheat or bran and starch from rice, but which have long histories in Asian cultures. It also highlights the incorporation of those bioactive compounds in foods and the enhancement of their bioavailability. *Functional Foods and Dietary Supplements: Processing Effects and Health Benefits* will be required reading for those working in companies, research institutions, and universities that are active in the areas of food processing and agri-food environment. Food scientists and engineers will value the new data and research findings contained in the book while environmentalists, food regulatory agencies, and other food industry personnel involved in functional food production or development will find it a very useful source of information. [History of Soy Nutritional Research \(1990-2021\)](#) William Shurtleff; Akiko Aoyagi, 2021 The world's most comprehensive, well documented and well illustrated book on this subject.
