that have flown in orbit since the early 1970s The histories of these earlier programs have been all but forgotten as the public focused on other higher profile adventures such as the Apollo moon landings A vast trove of stories filled with excitement danger humor sadness failure and success Outposts on the Frontier reveals how the Soviets and the Americans combined strengths to build space stations over the past fifty years At the heart of these scientific advances are people of both greatness and modesty Jay Chladek documents the historical tapestry of the people the early attempts at space station programs and how astronauts and engineers have contributed to and shaped the ISS in surprising ways Outposts on the Frontier delves into the intriguing stories behind the USAF Manned Orbiting Laboratory the Almaz and Salyut programs Skylab the Apollo Soyuz Test Project Spacelab Mir station Spacehab and the ISS and gives past due attention to Vladimir Chelomei the Russian designer whose influence in space station development is as significant as Sergei Korolev s in rocketry Outposts on the Frontier is an informative and dynamic history of humankind s first outposts on the frontier of space

**Women in Space - Following Valentina** Shayler David, Ian A. Moule, 2006-08-29 Space exploration has developed from early unmanned space probes through the pioneering years of the Manned Mercury Gemini and Apollo missions to missions that now include women in the crew as a matter of course Dave Shayler tells the story of the first woman balloonist in 1784 to their breakthrough as astronauts and cosmonauts in a range of professional roles He covers the contribution women have made to space exploration and draws on interviews with Shuttle and Mir crew members who were women These interviews detail the achievements of the first female Shuttle commander and the first female resident crew member of the International Space Station These and many other events are presented in a detailed and highly readable account that recalls the difficult path to space exploration by women [NASA's Scientist-Astronauts](#) Shayler David, Colin Burgess, 2006-09-18 This book provides unique access to the story of how scientists were accepted into the American Space Programme and reveals how after four difficult decades the role of the heroic test pilot astronaut has been replaced by men and women who are science orientated space explorers

Launius,2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This

volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experience Amazon [Voices of the Soviet Space Program](#) S. Gerovitch, 2014-12-16 In this remarkable oral history Slava Gerovitch presents interviews with the men and women who witnessed Soviet space efforts firsthand Rather than comprising a master narrative these fascinating and varied accounts bring to light the often divergent perspectives experiences and institutional cultures that defined the Soviet space program [Foothold in the Heavens](#) Ben Evans, 2010-08-14 Foothold in the Heavens the second volume in the A History of Human Space Exploration series focuses upon the 1970s the decade in which humanity established real longterm foothold in the heavens with the construction and operation of the first space stations It marked a transitional phase between the heady race to the Moon days of the Sixties and efforts to make space travel more economical more frequent and more routine Space exploration in the Seventies although dominated by Soviet achievement saw the first efforts of mankind to really live and work in space producing results of direct benefit to humans on Earth The emphasis changed from the gung ho strap it on and go pioneers of the Sixties to the more practical exploitation of space for science medicine and technology This book focuses on each mission launched between April 1971 and April 1981 from the launch of the world's first space station to the end of operations of Salyut 6 and from the expanded lengthy exploration of the Moon on Apollo 15 to the first flight of the Shuttle **Soviet and Russian Lunar Exploration** Brian Harvey, 2007-08-17 When in July 1969 the Americans decisively beat the Soviet Union in the race to put an astronaut on the moon this event had profound historical scientific and political implications This book tells the story of the Soviet and Russian lunar programme from its origins to the reconsideration of a lunar programme in the present day federal Russian space programme Following Sputnik the first Soviet lunar flights achieved the key goals of hitting circling and photographing the moon in 1959 The Soviet Union planned to achieve the biggest prize of them all the first person to land on the moon and built all the key spaceships required to do so such as a lunar orbiter and lander Brian Harvey describes the techniques devised by the USSR for lunar landing from the LK lunar module to the LOK lunar orbiter and tested versions in Earth orbit He asks whether these systems would have worked and examining how well they were tested concludes that they would have the Soviet Union lost the moon race for political not technical reasons Designs for moon bases were even drawn up In the end the Soviet Union ran an impressive series of robotic missions from 1968 to 1976 to circle the moon map the far side conduct scientific observations from orbit recover samples and rove over the surface The scientific haul from these missions is surveyed what was actually learned about the moon its rocks and the lunar environment

that will be useful for the present plans by the United States to return to the moon and for other countries such as India and China to conduct their own lunar exploration The book opens in Surgut Siberia in August 1976 with a largely forgotten event the return to Earth after a three day journey from the moon under a single parachute of the tiny Luna 24 cabin with a core sample drilled deep into the Sea of Crises a remarkable scientific and engineering achievement It ends with an examination of projected missions from plans to explore the far side and set up lunar observatories to the Luna Glob explorer of the 1990s There is also discussion of lunar tourism using a modernized version of the Zond spacecraft which flew around the moon from 1968 to 1970
