**"Space-Perception and the Philosophy of Science"** American Philosophical Association. Eastern Division, [Space-Time Geometries for Motion and Perception in the Brain and the Arts](#) Tamar Flash, Alain Berthoz, 2021-01-04 This book is based on a two day symposium at the Paris Institute of Advanced Study titled space time geometries and movement in the brain and the arts It includes over 20 chapters written by the leading scientists and artists who presented their related research studies at the symposium and includes six sections the first three focus on space time geometries in perception action and memory while the last three focus on specific artistic domains drawing and painting dance music digital arts and robotics The book is accompanied by a dedicated webpage including related images and videos There is an ever growing interest in the topics covered by this book Space and time are of fundamental importance for our understanding of human perception action memory and cognition and are entities which are equally important in physics biology neuroscience and psychology Highly prominent scientists and mathematicians have expressed their belief that our bodies and minds shape the ways we perceive space and time and the physical laws we formulate Understanding how the brain perceives motion and generates bodily movements is of great significance There is also growing interest in studying how space time and movement subserve artistic creations in different artistic modalities e g fine arts digital and performing arts and music This interest is inspired by the idea that artists make intuitive use of the principles and simplifying strategies used by the brain in movement generation and perception Building upon new understanding of the spatio temporal geometries subserving movement generation and perception by the brain we can start exploring how artists make use of such neuro geometrical and neuro dynamic representations in order to express artistic concepts and emotionally affect the human observers and listeners Scientists have also started formulating new ideas of how aesthetic judgements emerge from the principles and brain mechanisms

**Environment, Space, Place: Volume 1 / Issue 1 (Spring 2009)** Gary Backhaus,2009 *Ideas for a Hermeneutic Phenomenology of the Natural Sciences* J.J. Kockelmans,2012-12-06 This book is a methodical and systematic presentation of basic ontological issues that must be raised with respect to the meaning and function of natural science The ontological issues are discussed from a hermeneutic phenomenological point of view In addition the book contains critical discussions of basic themes raised by Carnap Hempel Stegmüller Kuhn Lakatos Hahn Popper van Fraassen Heelan and Kisiel One of the basic theses developed in the book is that logical epistemological and methodological issues pertinent to the natural sciences should be complemented by ontological issues that focus mainly on meaning and truth The book also contains one chapter on the implications of the ontological ideas presented for the history of the natural sciences *Columbia Companion to Twentieth-Century Philosophies* Constantin V. Boundas,2007 *Columbia Companion to Twentieth Century Philosophies* is the first guide to cover both the Anglo American analytic and European continental traditions Organized thematically the volume thoroughly discusses the major movements and fields of each tradition and features the contributions of highly distinguished specialists in their fields This book is divided into three sections The first is devoted to highlighting the multidimensional work of philosophers identified with the analytic tradition with Nicholas Rescher writing on neoidealism Josephine Donovan commenting on feminist philosophy Tyler Burge discussing the philosophy of language and mind and Robert Hanna reflecting on Kant's legacy The second section presents the thought of those who identified themselves with the continental tradition featuring Jean Grondin on hermeneutics Leonard Lawlor on phenomenology Charles Scott on postmodernism and Babette Babich on the philosophy of science This volume also covers logical positivism naturalism pragmatism aesthetics existentialism Marxism the Frankfurt School structuralism psychoanalysis political philosophy ethics and the philosophy of religion The final section addresses concurrent trends in Indian Chinese Japanese and African philosophy and a comprehensive introduction by the editor not only provides a thorough outline of the problems and issues of the analytic and continental traditions but also boldly challenges the conviction that the two approaches must be rivals *Columbia Companion to Twentieth Century Philosophies* is an invaluable overview of the ideas that have shaped a monumentally important century in the history of philosophy offering an unusually panoramic perspective that allows readers to form their own interpretations of original materials *Gadamer and Hermeneutics* Hugh J. Silverman,2016-08-19 This title first published in 1991 opens with an account by Gadamer of his own life and work and their relation to the achievements of hermeneutics Building upon the key theme of dialogue *Gadamer and Hermeneutics* provides a series of essays either linked Gadamer to other major contemporary philosophers or focusing on a given Gadamerian theme This book will be of interest to students of literary theory *New Essays in Metaphysics* Robert C. Neville,1987-01-01 This volume displays fifteen of the many lively options in

the field of metaphysics The authors having finished their formal education in the 1960s or later belong to the generation of philosophers whose rebellion was against those who thought they saw metaphysics in the grand sense to be passe or impossible The authors also share a commitment to the importance of metaphysics for the social and cultural life of our time Despite the diversity of argued opinions on the fundamental array of metaphysical topics these essays display the zest of a reborn enterprise at once appropriating a rich and honorable past and moving into new areas only recently thought illegitimate for philosophy

**Hermeneutics and the Natural Sciences** Robert P. Crease, 2012-12-06 This remarkable volume attests to the world wide development of a hermeneutical approach to the natural sciences Questions raised by the essays include What is a phenomenology of scientific perception How does meaning arise out of laboratory situations How do individuals or groups come to terms with the particular problem situations in which they find themselves by drawing on the available conceptual and practical resources which structure these situations The essays are organized around three central themes One group of authors Heelan Kockelmans and Gremmen Jacobs recalls and applies existing historical resources of hermeneutical phenomenology to current scientific and social issues A second group Kisiel Eger considers the differences between a specifically hermeneutical approach to science and related approaches such as cultural studies and social constructivism A third group Ihde Gendlin seeks to forge new directions and tools for understanding natural scientific practice As Crease s introductory essay makes plain the authors share the commitment of hermeneutical philosophy to the priority of meaning over technique the primacy of the practical over the theoretical and the priority of situation over abstract formulation In the process the authors revive and transform the ancient Greek idea that the key to living well to being fully and authentically human resides primarily in the exercise of the practical not the theoretical virtues in the art of doing well in the workworld and acting well in the polis

**Hermeneutic Philosophies of Social Science** Babette Babich, 2017-10-23 Hermeneutic philosophies of social science offer an approach to the philosophy of social science foregrounding the human subject and including attention to history as well as a methodological reflection on the notion of reflection including the intrusions of distortions and prejudice Hermeneutic philosophies of social science offer an explicit orientation to and concern with the subject of the human and social sciences Hermeneutic philosophies of the social science represented in the present collection of essays draw inspiration from Gadamer s work as well as from Paul Ricoeur in addition to Michel de Certeau and Michel Foucault among others Special attention is given to Wilhelm Dilthey in addition to the broader phenomenological traditions of Edmund Husserl and Martin Heidegger as well as the history of philosophy in Plato and Descartes The volume is indispensable reading for students and scholars interested in epistemology philosophy of science social social studies of knowledge as well as social studies of technology

**Heidegger on Science** Trish Glazebrook, 2012-02-23 Although Martin Heidegger is well known for his work on technology he is not often discussed in the context of science broadly speaking This volume is the first to showcase diverse perspectives on Heidegger s assessments of the sciences looking at a number of

different ways that Heidegger's writings contribute to questions concerning how we understand the world through science. With particular attention to quantum theory, natural science, technoscience, and a section devoted specifically to investigating what Being and Time has to say about science, the book will be of interest to scholars in a wide range of disciplines and traditions. It closes with consideration of questions about sustainability and ethics raised by Heidegger's engagement with the sciences.

**Carnal Thoughts** Vivian Sobchack, 2004-10-02 A group of sophisticated essays on how we experience film with all five senses and our sense of history.

**Phenomenology and Indian Philosophy** D. P. Chattopadhyaya, Lester Embree, Jitendranath Mohanty, 2011-05-01 This book shows the close relation between the phenomenology of the West and the phenomenological approach taken by Indian thinkers both classical and modern. It illustrates that the underlying spirit of phenomenology and hermeneutics has been consciously followed by Indian philosophers for centuries and is not peculiar to Western thinkers. It also shows that Edmund Husserl and K. C. Bhattacharyya were aware of these parallel trends of thought. Phenomenology and Indian Philosophy addresses not only the basic theme of phenomenology but its aesthetic, social, psychological, scientific, and technological aspects as well.

**Science Unfettered** J. E. McGuire, Barbara Tuchańska, 2000 Working on a large canvas, *Science Unfettered* contributes to the ongoing debates in the philosophy of science. The ambitious aim of its authors is to reconceptualize the orientation of the subject and to provide a new framework for understanding science as a human activity. Mobilizing the literature of the philosophy of science, the history of science, the sociology of science, and philosophy in general, Professors McGuire and Tuchanska build on these fields with the view of transforming their insights into a new epistemological and ontological basis for studying the enterprise of science. In this approach, McGuire and Tuchanska have combined work from both Anglo-American and Continental traditions of philosophy. As a result, the works of Popper, Kuhn, Quine, and Lakatos, as well as Heidegger, Gadamer, Nietzsche, Foucault, and Feyerabend, are called into play. In addition, *Science Unfettered* deals extensively with history and historicity, offering a theory of historicity of science as it emerges in sociocultural contexts. Unorthodox in its approach, *Science Unfettered* articulates an alternative that views science ontologically as a practice, a perspective from which traditional issues concerning the relationship of experiment to theory, the cognitive to the social, the relation between historical change and epistemic validity, the meaning of objectivity, and the like can be addressed in a more fruitful way than is possible by starting with the traditional ontological framework of subject and object.

**The Material Realization of Science** Hans Radder, 2012-05-03 This book develops a conception of science as a multi-dimensional practice which includes experimental action and production, conceptual, theoretical interpretation, and formal mathematical work. On this basis, it addresses the topical issue of scientific realism and expounds a detailed referentially realist account of the natural sciences. This account is shown to be compatible with the frequent occurrence of conceptual discontinuities in the historical development of the sciences. Referential realism exploits several fruitful ideas of Jürgen Habermas, especially his distinction between objectivity and truth; it builds on a in-depth

analysis of scientific experiments including their material realization and it is developed through an extensive case study in the history and philosophy of quantum mechanics The new postscript explains how the book relates to several important issues in recent philosophy of science and science studies I highly recommend this book Radder is probably the first philosopher of science to make productive epistemological use of the notion of experimental system The postscript is most valuable since it connects his work not only to the topical debates in philosophy of science but also to history of science and science studies Hans J rg Rheinberger Max Planck Institute for the History of Science Berlin About the first edition The debate on realism has recently become rather stale by repetition but Radder introduces original insights and has written a lively and well argued contribution to it The book is to be recommended also as a clear introduction to the complex of relevant issues Mary Hesse University of Cambridge Radder presents an ingenious approach to the issue of scientific realism and conceptual discontinuity I believe his idea that conceptual discontinuity presupposes other types of continuity is extremely important Mark Rowlands University of Alabama Tuscaloosa Hans Radder is professor of philosophy of science and technology at VU University Amsterdam He is the author of *In and About the World* and *The World Observed* The World Conceived He edited *The Philosophy of Scientific Experimentation* and *The Commodification of Academic Research Science and the Modern University* and is coeditor of *Science Transformed Debating Claims of an Epochal Break* *Philosophy of Technology* Robert C. Scharff, Val Dusek, 2013-12-02 The new edition of this authoritative introduction to the philosophy of technology includes recent developments in the subject while retaining the range and depth of its selection of seminal contributions and its much admired editorial commentary Remains the most comprehensive anthology on the philosophy of technology available Includes editors insightful section introductions and critical summaries for each selection Revised and updated to reflect the latest developments in the field Combines difficult to find seminal essays with a judicious selection of contemporary material Examines the relationship between technology and the understanding of the nature of science that underlies technology studies **Art And Engagement** Arnold Berleant, 2010-06-18 A new aesthetic theory based on aesthetic perception and participation with the arts *Hermeneutics and Science* Márta Fehér, O. Kiss, L. Ropolyi, 2013-04-17 Hermeneutics was elaborated as a specific art of understanding in humanities The discovered paradigmatic historical characteristics of scientific knowledge and the role of rhetoric interpretation and contextuality enabled us to use similar arguments in natural sciences too In this way a new research field the hermeneutics of science emerged based upon the works of Husserl Merleau Ponty Heidegger and Gadamer A dialogue between philosophers and scientists begins in this volume on hermeneutic approaches to physics biology ethology mathematics and cognitive science Scientific principles methodologies discourse language and metaphors are analyzed as well as the role of the lay public and the legitimation of science Different hermeneutical phenomenological approaches to perception experiments methods discovery and justification and the genesis of science are presented Hermeneutics shed a new light on the

incommensurability of paradigms the possibility of translation and the historical understanding of science      **Active Hermeneutics** Stanley E. Porter, Jason C. Robinson, 2020-12-30 Hermeneutics as a discipline of the humanities is often assumed to be in thrall to the same subjectivity of every interpretive method in direct contrast to the objectivity prized by the natural sciences This book argues that there is a false dichotomy here and that ancient and modern ideas of knowledge can be utilized to create a new active form of hermeneutics One capable of creating a standard by which to judge better and worse models of understanding This book explores decisive aspects over which the future of hermeneutics a future inexplicably tied to a history of hermeneutics will continue to struggle namely the limits and possibilities of situated human understanding This book is located in the middle of a number of major converging discussions within contemporary intellectual discourse Drawing upon a wide range of ancient and modern hermeneutical thought including Aristotle Bernstein Heidegger Kant and Gadamer the result is a hermeneutical approach that pushes beyond the traditional limits of human understanding This is a bold attempt to move hermeneutics into a new phase As such it will be of significant interest to scholars and academics working in General Hermeneutics Theology and the Philosophy of Religion
