Space Shuttle Mission to the Future , **Alternatives for Future U.S. Space-launch Capabilities** ,2006
Advanced Technology for America's Future in Space ,1992 *Future Utilization of the Kennedy Space Center, Cape Kennedy, Florida* United States. Congress. House. Committee on Science and Astronautics. Subcommittee on Manned Space Flight,1970 Future Utilization of the Kennedy Space Center, Cape Kennedy, Florida, Hearings Before the Subcommittee on Manned Space Flight...91-2 United States. Congress. House. Science and Astronautics,1970 *The Future of NASA* United States. Congress. House. Committee on Science,2006 **Reinventing NASA** Roger Handberg,2003-12-30 From its beginnings NASA was convinced that its real mission was to create the opportunity for a much different and better society on Earth namely through human space flight Pursuit of such a goal has led the agency to persist in certain activities even when they conflict with the wishes of Congress and the President Recent changes in the international environment changes that began well before September 11 2001 have brought the military back into the field of human space flight a situation that holds certain hazards for NASA since the military is more powerful politically Dramatic changes could be in store changes that could severely damage NASA s capacity for continuing what it sees as its primary objective While most analyses see the agency as riddled with incompetence Handberg argues that NASA s troubles are a product of its internal values He begins with an historical overview of the major themes in NASA s history followed by chapters on specific areas of concentration such as the space station space transportation space science and internal reforms He also discusses the long term future of the agency and human space flight in general both domestically and internationally **Monthly Catalogue, United States Public Documents** ,1995 **The Future of the U.S. Space Industrial Base** United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Space,1993 **NASA SP-7500** United States. National Aeronautics and Space Administration,1986 Terrestrial Space Radiation and Its Biological Effects Percival D. McCormack,Charles E. Swenberg,Horst Bucker,2012-12-06 This volume is based on the proceedings of an Advanced Study Institute ASI sponsored by the North Atlantic Treaty Organization NATO held October 1987 in Corfu Greece The Institute received financial support from the National Aeronautics and Space Administration U S A Armed Forces Radiobiology Research Institute U S A Department of Energy U S A Deutsche Forschungs und Versuchsanstalt fur Luft und Raumfahrt e v Kaln Germany The advent of the shuttle era is providing fresh impetus for large space ventures such as communication centers solar power stations astronomical observatories orbiting factories and space based radar Such ventures will rely heavily on an extensive and prolonged human presence in space doing in orbit construction maintenance and operation Among the advantages of location in space are the near zero gravity environment commanding location and the reception of solar energy and astronomical signals unattenuated by the atmosphere Central to long term manned space missions are the problems associated with the effects of exposure to ionizing radiations on humans Manned space mis sions in the past have

encountered relatively benign radiation environments because of their very short duration and orbit configuration. However, crew stay time of up to a year has been recently achieved by the Soviet space program and Mars missions lasting several years are under serious consideration. **VCR and Film Catalog**, 1987. Large Space Structures & Systems in the Space Station Era, 1990. *NASA Authorization for Fiscal Year 1973, Hearings Before ...92-2, on S. 3094 ...* United States. Congress. Senate. Aeronautical and Space Sciences, 1972. **Seizing the Future** Michael G. Zey, Seizing the Future is a brilliant and exuberant antidote to the pessimistic poison being peddled by fashionable declinists. Ronald Bailey, author of *ECO SCAM* A thoughtful argument of how the next generation will focus on massive industrialization rather than create strictly an information based economy. Teresa McUsic, Morning Star Telegram. Marked by verve, vision and a thorough familiarity with the field, this book buoy the spirit, challenges conventional thinking and arms the reader as do few comparable works in futuristics. Engagingly written and free of both jargon and pretentiousness, it sets a high standard for twenty-first century explorations. Arthur B. Shostak. Recapturing a Future for Space Exploration National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2012-01-30. More than four decades have passed since a human first set foot on the Moon. Great strides have been made in our understanding of what is required to support an enduring human presence in space as evidenced by progressively more advanced orbiting human outposts culminating in the current International Space Station (ISS). However, of the more than 500 humans who have so far ventured into space, most have gone only as far as near Earth orbit and none have traveled beyond the orbit of the Moon. Achieving human progress into the solar system had proved far more difficult than imagined in the heady days of the Apollo missions, but the potential rewards remain substantial. During its more than 50-year history, NASA's success in human space exploration has depended on the agency's ability to effectively address a wide range of biomedical, engineering, physical science, and related obstacles—an achievement made possible by NASA's strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery. The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA, which are all the more remarkable given budgetary challenges and changing directions within the agency. In the past decade, however, a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope, with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development of advanced human exploration capabilities. Although its review has left it deeply concerned about the current state of NASA's life and physical sciences research, the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and engineering program can achieve successes that will

bring the space community the U S public and policymakers to an understanding that we are ready for the next significant phase of human space exploration The goal of this report is to lay out steps and develop a forward looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight thereby enabling the U S space program to deliver on new exploration initiatives that serve the nation excite the public and place the United States again at the forefront of space exploration for the global good
