Space Vehicles:

Space Vehicles Ian Graham, 2006 Space Vehicles have the ability to be the world's greatest if we want to build them in such a way Find out why these machines are considered the greatest in the world This title is filled with detailed facts and stunning color photography

Aerodynamics of Space Vehicles, 1963 **Aerodynamic Data of Space Vehicles** Claus Weiland, 2014-02-22 The capacity and quality of the atmospheric flight performance of space flight vehicles is characterized by their aerodynamic data bases A complete aerodynamic data base would encompass the coefficients of the static longitudinal and lateral motions and the related dynamic coefficients In this book the aerodynamics of 27 vehicles are considered Only a few of them did really fly Therefore the aerodynamic data bases are often not complete in particular when the projects or programs were more or less abruptly stopped often due to political decisions Configurational design studies or the development of demonstrators usually happen with reduced or incomplete aerodynamic data sets Therefore some data sets base just on the application of one of the following tools semi empirical design methods wind tunnel tests numerical simulations In so far a high percentage of the data presented is incomplete and would have to be verified Flight mechanics needs the aerodynamic coefficients as function of a lot of variables The allocation of the aerodynamic coefficients for a particular flight operation at a specific trajectory point is conducted by an aerodynamic model The establishment of such models is described in this book This book is written for graduate and doctoral students to give them insight into the aerodynamics of the various flight configurations Further for design and development engineers in industry and at research institutes including universities searching for an appropriate vehicle shape as well as for non specialists who may be interested in this subject The book will be helpful too in the case that system studies require in their concept phases the selection of suitable vehicle shapes

Space Vehicle Dynamics and Control Bong Wie, 1998 A textbook that incorporates the latest methods used for the analysis of spacecraft orbital attitude and structural dynamics and control Spacecraft dynamics is treated as a dynamic system with emphasis on practical applications typical examples of which are the analysis and redesign of the pointing control system of the Hubble Space Telescope and the analysis of an active vibrations control for the COFS Control of Flexible Structures Mast Flight System In addition to the three subjects mentioned above dynamic systems modeling analysis and control are also discussed Annotation copyrighted by Book News Inc Portland OR

Flight Dynamics and Control of Aero and Space Vehicles Rama K. Yedavalli, 2020-02-25 Flight Vehicle Dynamics and Control Rama K Yedavalli The Ohio State University USA A comprehensive textbook which presents flight vehicle dynamics and control in a unified framework Flight Vehicle Dynamics and Control presents the dynamics and control of various flight vehicles including aircraft spacecraft helicopter missiles etc in a unified framework It covers the fundamental topics in the dynamics and control of these flight vehicles highlighting shared points as well as differences in dynamics and control issues making use of the systems level

viewpoint The book begins with the derivation of the equations of motion for a general rigid body and then delineates the differences between the dynamics of various flight vehicles in a fundamental way It then focuses on the dynamic equations with application to these various flight vehicles concentrating more on aircraft and spacecraft cases Then the control systems analysis and design is carried out both from transfer function classical control as well as modern state space control points of view Illustrative examples of application to atmospheric and space vehicles are presented emphasizing the systems level viewpoint of control design Key features Provides a comprehensive treatment of dynamics and control of various flight vehicles in a single volume Contains worked out examples including MATLAB examples and end of chapter homework problems Suitable as a single textbook for a sequence of undergraduate courses on flight vehicle dynamics and control Accompanied by a website that includes additional problems and a solutions manual The book is essential reading for undergraduate students in mechanical and aerospace engineering engineers working on flight vehicle control and researchers from other engineering backgrounds working on related topics

Development of Propulsion Technology for U.S. Space-launch Vehicles J. D. Hunley, 2007 In this definitive study J D Hunley traces the program's development from Goddard's early rockets and the German V 2 missile through the Titan IVA and the Space Shuttle with a focus on space launch vehicles Since these rockets often evolved from early missiles he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology Focusing especially on the engineering culture of the program Hunley communicates this very human side of technological development by means of anecdotes character sketches and case studies of problems faced by rocket engineers He shows how such a highly adaptive approach enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science Unique in its single volume coverage of the evolution of launch vehicle technology from 1926 to 1991 this meticulously researched work will inform scholars and engineers interested in the history of technology and innovation as well as those specializing in the history of space flight Environmental Factors Influencing Metals Applications in Space Vehicles J.
