captured the exciting challenges this study sets out to explore First this study develops a generalized model for United States military transformations in peacetime To develop the model the author combines observations made by several historians about recurrent trends in military strategic innovation The author concludes that after taking into account inevitable uncertainty there are three identifiable factors that occur in most cases of military transformation The three key factors are the need for a coherent congruent vision an emerging culture that bolsters the vision and develops competing theories of victory to fulfill the vision and a process for honestly assessing the maturing vision and its supporting theories of victory After defining the limitations of the model and its usefulness the author applies the framework to an important aspect of national security the future of space power The framework is used to study the recent approach to space power from a civilian policy and military application perspective Application of the transformation model highlights some important points about the present approach for developing space power First the civilian vision is not completely congruent with the military vision and the military vision is inconsistent Second the military primarily the Air Force has made moderate but hesitant progress towards nurturing a space power culture with some unexpected consequences Third the military has an uncoordinated haphazard approach to assessment that blurs the merit of the space power vision and associated theories Colburn's *United Service Magazine and Naval and Military Journal*, 1900 Jane's *Space Directory* Jane's Information Group, 2003-03 Developments in the worldwide space business There is information on past current and future space programmes and the capabilities of space centres details of launchers satellites and support systems as well as information on the commercial contractors Also features chronological lists of manned flights as far back as Gagarin Arming the Heavens Jack Manno, 1984 Rumfartshistorie med den t tte sammenh ng mellem civil og milit r rumforskning De forskellige trin forskningen har taget med udviklingen op til 1980erne og programmerne for 1990erne is r den milit re del og dennes betydning

**Evolving Army Needs for Space-Based Support** Jeffrey L. Caton, 2015-04 The Army has been involved with space based military operations for well over a half century During this time space operations have changed from a realm exclusive to scientists and engineers to highly classified activities largely unknown to the general population to the unveiling of space based communication imagery surveillance and environment capabilities that have become a foundation for all modern warfare Today such support is so ingrained into daily operations that most soldiers sailors airmen and marines assume it has been and always will be available for their use But with such reliance comes vulnerability that potential adversaries may try to exploit The evolution of Army space operations is well documented in many sources thus this monograph serves not as a comprehensive history or detailed critique of the myriad accomplishments Rather it serves as a primer for current and future space based operations to provide senior policymakers decisionmakers military leaders and their respective staffs an overall appreciation for existing Army space capabilities and the challenges opportunities and risks associated with their use in joint operations Other products relating to this topic include the following United States Code 2012 Edition V 34 Title 50 War and
