Space Technology & Planetary Astronomy Joseph N. Tatarewicz, 1990 the book reminds us of an important lesson in the postwar era of big science that government policy may lead initially to tremendous support for various fields of science and technology Science a triumph of historical analysis Choice This is an excellent record of the beginnings of the NASA planetary astronomy program in the years 1958-70 American Historical Review The historical circumstances that led to this country's great leap into space were unique but it is clear that there are many lessons to be learnt from this enthralling tale and Tatarewicz tells the tale well Annals of Science When NASA went looking for expertise on the moon and planets following Sputnik they found that astronomers had long since turned their telescopes away from our planets and toward the stars Where were the scientists who could help the United States explore the solar system The answer as this important new study shows was that NASA had to create them This story of the precipitous rise and decline of planetary astronomy is an important case study of science in an age of state managed research and development It demonstrates that the lines between science technology politics and society are anything but fixed and impermeable HDBK SPACE TECHNOLOGY STATUS

Single Stage to Orbit Andrew J. Butrica, 2003-10-22 While the glories and tragedies of the space shuttle make headlines and move the nation the story of the shuttle forms an inseparable part of a lesser known but no less important drama the search for a reusable single stage to orbit rocket Here an award winning student of space science Andrew J Butrica examines the long and tangled history of this ambitious concept from its first glimmerings in the 1920s when technicians dismissed it as unfeasible to its highly expensive heyday in the midst of the Cold War when conservative backed government programs struggled to produce an operational flight vehicle Butrica finds a blending of far sighted engineering and heavy handed politics To the first and

oldest idea that of the reusable rocket powered single stage to orbit vehicle planners who belonged to what President Eisenhower referred to as the military industrial complex added experimental X aircraft like capabilities and eventually a faster cheaper smaller managerial approach Single Stage to Orbit traces the interplay of technology corporate interest and politics a combination that well served the conservative space agenda and ultimately triumphed not in the realization of inexpensive reliable space transport but in a vision of space militarization and commercialization that would appear settled United States policy in the early twenty first century D M Ashford
