Space Astrophysics:

The Fundamentals of Modern Astrophysics Mikhail Ya Marov, 2014-11-11 *The Fundamentals of Modern Astrophysics* provides an overview of the modern science of astrophysics. It covers the Sun, Solar System bodies, exoplanets, stars, and star life cycle; planetary systems origin and evolution; basics of astrobiology; our galaxy, the Milky Way; other galaxies and galactic clusters; a general view of the Universe; its structure, evolution, and fate; modern views and advanced models of cosmology; as well as the synergy of micro and macro physics; standard model; superstring theory; multiversality and worm holes. The main concepts of modern astrophysics and prospects for future studies are accompanied by numerous illustrations and a summary of the advanced projects at various astronomical facilities and space missions. Dr Marov guides readers through a maze of complicated topics to demystify the field and open its wonders to all. **Handbook of Space Astronomy and Astrophysics**

Martin V. Zombeck, 2006-11-09 Fully updated and including data from space based observations, this Third Edition is a comprehensive compilation of the facts and figures relevant to astronomy and astrophysics. As well as a vast number of tables, graphs, diagrams, and formulae, it also includes a comprehensive index and bibliography allowing readers to easily find the information they require. The book contains information covering a diverse range of topics in addition to astronomy and astrophysics, including atomic physics, nuclear physics, relativity, plasma physics, electromagnetism, mathematics, probability, and statistics, and geophysics. This handbook contains the most frequently used information in modern astrophysics and will be an essential reference for graduate students, researchers, and professionals working in astronomy and the space sciences. The President's budget blueprint suggested that now is the time to address these concerns and directed the National Science Foundation (NSF) and the National Aeronautics and Space Administration (NASA) to establish a blue ribbon panel to 1) assess the organizational effectiveness of the federal research enterprise in astronomy and astrophysics; 2) consider the pros and cons of transferring NSF's astronomy responsibilities to NASA; and 3) suggest alternative options for addressing issues in the management and organization of astronomical and astrophysical research. NASA and NSF asked the National Research Council to carry out the
