Space Law Thomas Leclerc, 2024-02-06 Outer space is subject to a legal framework there is a set of rules specifically dedicated to outer space and to the activities carried out there These rules have developed since 1957 the year the first artificial satellite was launched Major changes have also affected the technology used and the actors involved as well as the domains concerned by the exploration and use of outer space Space Law will lay out the progressive densification of the legal framework that is applicable to outer space and the activities that are carried out there Without claiming to be exhaustive the aim of this book is to present the main primary sources of space law its main principles the diversity of its fields of application and the challenges and issues that the development of space activities inevitably raises

elaboration of international conventions in the framework of the United Nations the second phase saw the adoption of special legal regimes in the form of UN General Assembly Resolutions which were dealing with issues like direct broadcasting by satellites DBS remote sensing RS and the use of nuclear power sources NPS in outer space The third and current phase received its impetus from the growing commercialization of space activities and their emerging privatization Therefore the main characteristics of this period relate to the efforts of adapting international space law to these recent changes and of finding ways and means to reconcile State interests with commercial perspectives This book forms a welcome addition to any collection in the field of space law and is a refreshing contribution to the discussion in the field
