Space Radiation Biology and Related Topics Cornelius A. Tobias, Paul Todd, 2013-10-22 Space Radiation Biology and Related Topics provides information pertinent to the fundamental aspects of space radiation biology This book discusses space radiation hazards as well as the importance of natural radiations in the processes of biogenesis Organized into 12 chapters this book begins with an overview of the fundamental aspects of radiobiology This text then discusses the theoretical treatments of the chronic radiation response and the applicability of some of its features in extended manned space missions Other chapters review the literature on models for recovery from radiation damage to some cellular systems This book discusses as well the effects of radiations on mammals with emphasis on those effects pertinent to the space flight situation The final chapter deals with the safety of nuclear power in space and explains the three types of nuclear devices designed for power production in space This book is a valuable resource for radiologists radiobiologists and radiotherapists

Space Radiation Biology and Related Topics Cornelius A. Tobias, Paul Todd, 1974 Advances in Radiation Biology John T. Lett, 2013-10-22 Advances in Radiation Biology Volume 12 provides an overview of the state of knowledge in the field of radiation biology Environmental matters are continuing to produce surprises and remain sources of concern The safe disposal of radioactive waste still is a major problem facing the nuclear power industry A possible solution is discussed here New information about the survivors from radiation exposure at Hiroshima and Nagasaki has emphasized the consequences of brain damage in the developing embryo the importance of late radiation carcinogenesis and the roles played by age and sex in human radiation responses It also is prompting an increasing number of scientists involved in radiation protection to question the use of small animal models to quantify late radiation effects in humans Contributions to this volume deal with experimental and other aspects of those problems Finally increasing confirmation of the dose rate response for densely ionizing radiations has highlighted the hazard they pose to humans in the terrestrial and extraterrestrial environments Therefore the intention of agencies in the United States and elsewhere to generate better funded and more scientifically perspicacious programs of space radiation biology is welcome Possible interests of the military in that regard are also considered *Foundations of Space Biology and Medicine: Space as a habitat* ,1975 Foundations of Space Biology and Medicine: bk.1-2.
