Spaceflight In The Era Of Aerospace Planes:

Spaceflight in the Era of Aero-space Planes Russell James Hannigan, 1994 This work deals with the future aero space launchers reusable launch vehicles that are operated like aircraft from the integrated perspective of the political technical and economic issues that drive their development Case study analyses include NASP Sanger HOTOL and Delta Clipper

Future Spacecraft Propulsion Systems and Integration Paul A. Czysz, Claudio Bruno, Bernd Chudoba, 2017-08-30 The updated and expanded third edition of this book focuses on the multi disciplinary coupling between flight vehicle hardware alternatives and enabling propulsion systems It discusses how to match near term and far term aerospace vehicles to missions and provides a comprehensive overview of the subject directly contributing to the next generation space infrastructure from space tourism to space exploration This holistic treatment defines a mission portfolio addressing near term to long term space transportation needs covering sub orbital orbital and escape flight profiles In this context a vehicle configuration classification is introduced covering alternatives starting from the dawn of space access A best practice parametric sizing approach is introduced to correctly design the flight vehicle for the mission This technique balances required mission with the available vehicle solution space and is an essential capability sought after by technology

forecasters and strategic planners alike *Tomorrow's Energy, revised and expanded edition* Peter Hoffmann, 2012-02-03 How the use of nonpolluting zero emission hydrogen as fuel could be the cornerstone of a new energy economy Hydrogen is the most abundant element in the universe An invisible tasteless colorless gas it can be converted to nonpolluting zero emission renewable energy When burned in an internal combustion engine hydrogen produces mostly harmless water vapor It performs even better in fuel cells which can be 2 5 times as efficient as internal combustion engines Zero emission hydrogen does not contribute to CO₂ caused global warming Abundant and renewable it is unlikely to be subject to geopolitical pressures or scarcity concerns In this new edition of his pioneering book Tomorrow's Energy Peter Hoffmann makes the case for hydrogen as the cornerstone of a new energy economy Hoffmann covers the major aspects of hydrogen production storage transportation fuel use and safety He explains that hydrogen is not an energy source but a carrier like electricity and introduces the concept of hydricity the essential interchangeability of electricity and hydrogen He brings the hydrogen story up to date reporting on the latest developments including new hydrogen and fuel cell cars from GM Daimler BMW Honda and Toyota He describes recent political controversies including Obama administration Energy Secretary and Nobel laureate in Physics Steven Chu's inexplicable dismissal of hydrogen which puts him at odds with major automakers German Chancellor Angela Merkel and others Our current energy system is a complex infrastructure and phasing in hydrogen will take effort and money But if we consider the real costs of fossil fuels pollution and its effects international tensions over gas and oil supplies and climate change we would be wise to promote its development **41st AIAA**

Spaceflight in the Aero-space Plane Era Russell J. Hannigan,David C. Webb,American Institute of Aeronautics and Astronautics,1991 Beyond Blue Skies Christopher J. Petty,2020-11 In 1945 some experts still considered the so called sound barrier an impenetrable wall while winged rocket planes remained largely relegated to science fiction But soon a series of unique rocket powered research aircraft and the dedicated individuals who built maintained and flew them began to push the boundaries of flight in aviation s quest to move ever higher ever faster toward the unknown Beyond Blue Skies examines the thirty year period after World War II during which aviation experienced an unprecedented era of progress that led the United States to the boundaries of outer space Between 1946 and 1975 an ancient dry lakebed in California s High Desert played host to a series of rocket powered research aircraft built to investigate the outer reaches of flight The western Mojave s Rogers Dry Lake became home to Edwards Air Force Base NASA s Flight Research Center and an elite cadre of test pilots Although one of them Chuck Yeager would rank among the most famous names in history most who flew there during those years played their parts away from public view The risks they routinely accepted were every bit as real as those facing NASA s astronauts but no magazine stories or free Corvettes awaited them just long days in a close knit community in the High Desert The role of not only the test pilots but the engineers aerodynamicists and support staff in making supersonic flight possible has been widely overlooked Beyond Blue Skies charts the triumphs and tragedies of the rocket plane era and

the unsung efforts of the men and women who made amazing achievements possible
