Shape and Size are considered concurrently for spatial relevance. A space, irrespective of the size, can have many different shapes.

The SIZE relates to the human body, and reflects the work capacities and duration required for domesticating a space. Sizes, as abstract entities, offer scaling, proportions, analogy, sequencing, proximity, etc. Size of a space is perceived for ergonomic facilitation, anthropometric adequacy, tasks conduction, social interaction, degree of distancing for social interaction, intimacy and privacy, security, cognition, physical and cognitive reach, communication and expression.

The SHAPES have primary identity relating to the gravity, like vertical, horizontal or inclination, but also directional peculiarities due to the differential sizes. Size is perceived as the difference between the Length and Width of a space. The height (gravity) confers its own scale of narrowness or broadness to the space. Height accentuates or de-emphasizes the character of the space nominally contributed by the relation between the Length and the Width. The orientation of smaller or larger size gives a feel of a deep and shallow space. All these terms also give a sense of direction (long vs short) in the space.

A space is considered small (narrow), if one of its horizontal-spread dimensions (either L or W) is proportionately smaller. The orientation of smaller or larger size gives a feel of a deep and shallow space. The terms (L W H) give a sense of direction in the space.

- Tall, is a height identity and Deep is frontal distance distinction.
- Narrow spaces have one of the floor dimensions (width or length) proportionately smaller. Spaces with a strong linear (directional) character seems narrower. Taller spaces seem narrower compared to a shallow (low height) space with the same floor spread.
- A wide space is very ambiguous a term. All large sized spaces are also wide spaces, because here both the dimensions are functionally more than adequate.

*The Shape of Space* Graham Nerlich, 1994-08-04 This is a revised and updated edition of Graham Nerlich's classic book 1976 It develops a metaphysical account of space that treats it as a real and concrete entity showing that shape plays a key explanatory role in space and spacetime theories Arguing that geometrical explanation is very like causal explanation Professor Nerlich prepares the ground for philosophical argument and investigates how different spaces would affect perception differently Along the way Professor Nerlich criticizes and rejects conventionalism as a non realist metaphysics of space concluding that there is in fact no problem of underdetermination for this aspect of spacetime theories while offering an extensive discussion of the relativity of motion

**Describing the Dynamics of "Free" Material Components in Higher-Dimensions** Dr. Martin Concoyle, 2014 The issue which the new ideas of these new books really raise with our culture is not about whether they are true since these new ideas identify a valid context for physical description and whereas the current context for math and physics 2014 cannot do that ie they cannot describe the stable properties of a general many but few body system Whereas the new ideas about math and physics can be used to solve the most fundamental problems about the physical world in regard to understanding physical stability a problem which the current descriptive context of math and physics 2014 cannot solve That is what now in 2014 passes for math and physics knowledge are delusions Yet these delusions are the ideas expressed in our propaganda education system about math and physics Rather The real issue which these new ideas present to our culture is about our cultural relation to what is beyond the material world That is it is about our cultural representation of religion or the spirit In particular in relation to the previous knowledge humans needed to possess in order to make Gobekli tepe Puma Punku Stonehenge etc ie simply to be able to lift and position such large stones as well as the understanding which is needed to go beyond the context of the material world and into the context of all the ancient mythologies in regard to the ancient religious stories etc etc The current paradigm in 2014 describes a general state of indefinable randomness in which there is always a chaotic transitioning process which exists as random elementary particle collisions and which supposedly is perpetually occurring Thus their description of the wide range of the generally stable states of the many but few body systems into which this forever chaotically transitioning process supposedly settles but explicit descriptions of this process do not exist Instead their answer is that such stable many but few body systems are too complicated to describe

**Computational Approaches to Archaeological Spaces** Andrew Bevan, Mark Lake, 2016-06-16 This volume of original chapters written by experts in the field offers a snapshot of how historical built spaces past cultural landscapes and archaeological distributions are currently being explored through computational social science It focuses on the continuing importance of spatial and spatio temporal pattern recognition in the archaeological record considers more wholly model based approaches that fix ideas and build theory and addresses those applications where situated human experience and perception are a core interest Reflecting the changes in computational technology over the past decade the authors bring in examples from historic and prehistoric sites in Europe Asia and the Americas to demonstrate the variety of applications available to the contemporary researcher

*Captain Invincible and the Space Shapes* Stuart J. Murphy, 2001-08-21 Captain Invincible and his intrepid space dog Comet are on a perilous journey back to Earth Throughout their mission the fearless captain and his canine

sidekick encounter asteroids poisonous gas and alien beings But will their knowledge of three dimensional shapes including cubes cones and pyramids help our heroes navigate past these obstacles and make it safely home *Shape Grammar and Space Syntax Approach in Contextual Design* Neeta Lambe, 2024-02-06 The book is an attempt to present a logical approach to contextual design With a lot of buzz around sustainability architects analyze contexts in detail to propose sustainable designs Hence the contextual design approach is gaining importance in architectural practice Architects and designers are always inclined to adopt an intuitive approach to design in historical contexts or surroundings with peculiar characteristics There is no specific methodical approach to design in such contexts apart from the ability to identify cues from the surrounding through experience This book presents a sequential framework wherein one can analyze synthesize and generate design genotypes based on the inbuilt spatial grammar of the context The shape grammar concept as a generative tool is presented to identify the spatial constructs grammar which acts as a cue for design genotypes Space syntax is explored as an analysis tool to evaluate the sympathetic spatial fitness of generated design genotypes The book establishes that the framework is logical in its methodical approach and would generate design genotypes which would help architects and designers have design interventions in in fill development to achieve congruence with the surrounding environment
