Gas Discharge and Gas Insulation Dengming Xiao, 2015-10-01 This book presents a comprehensive overview of research on environmentally friendly insulating gases in response to the urgent calls for developing alternatives to SF₆ due to the increasing awareness of the threat it poses as a greenhouse gas. It covers gas dielectrics, SF₆ and its mixtures and potential alternative gases, providing fundamental information on gas discharge and gas

insulation and especially focusing on the development of new environmentally friendly insulating gases over the last decade. The book begins by describing the insulating and arcing characteristics of SF₆ followed by an introduction to the gas dielectrics performance of SF₆ gas mixtures with buffer gases. The latest findings on new environmentally friendly insulating gases are described in detail and suggestions for practical application are also provided. Graduate students and teachers involved in high voltage and insulation engineering can use the book as teaching material. Researchers working in plasma science, laser action and related applied physics fields can also benefit from the book's analytical approach and detailed data. Engineers from the fields of electric power operation systems and electrical manufacturing will find it a valuable reference work for solving practical problems.

Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10. Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident and Piper Alpha to name but a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could without exaggeration be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals, engineers and managers can be found in this all encompassing reference instead. Frank Lees' world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field. Sam Mannan is professor of chemical engineering at Texas A&M. Principles, practice, codes, standards, data and references needed by those practicing in the field.
