A Doody's Core Title 2012

The thoroughly revised Second Edition of this authoritative reference continues to define the standard of care for the field of spinal cord medicine. Encompassing all of the diseases and disorders that may affect the proper functioning of the spinal cord or spinal nerves, this comprehensive volume provides a state-of-the-art review of the principles of care and best practices for restoring function and quality of life to patients with spinal cord injuries. Expert contributors from multiple disciplines cover topics ranging from acute medical and surgical management of specific problems to cutting-edge research, bladder, bowel, and sexual dysfunction, neurologic and musculoskeletal issues, advanced rehabilitation techniques and technologies, functional outcomes, and psychosocial care. While comprehensive in scope, *Spinal Cord Medicine* offers practical guidance for physicians and other health care professionals involved in the management of individuals with SCI, multiple sclerosis, and other spinal cord disorders. The Second Edition has been completely updated to fully reflect current science and practice. Each section has been re-ordered to better present information, and the Second Edition brings in many new authors and topics, more diagrams, illustrations, and tables to solidify concepts, and contains 18 entirely new chapters.

Spinal Cord Medicine: Principles and Practice, Second Edition reflects the breadth and depth of this multifaceted specialty. Involving over 150 authors from more than 20 fields of medicine, it is a trusted reference for anyone who works with spinal cord patients and strives to deliver superior clinical care and improve outcomes.

Applied Neurosciences for the Allied Health Professions Douglas McBean, Frederike van Wijck, 2012-09-21

This brand new resource provides a solid, comprehensive, and accessible foundation in neurosciences for undergraduates and pre-registration/postgraduate students. Using a multidisciplinary approach, it will guide students in their understanding of the most commonly found problems in neurological rehabilitation and inform their clinical practice. The book starts with the foundation of basic neurosciences, covering the normal function and structure of the nervous system from the organism as a whole through to the molecular level. It also introduces perceptuo-motor control and learning topics that lie at the heart of rehabilitation. The book then goes on to discuss problems that allied health professionals commonly encounter in neurological rehabilitation. Topics covered include problems with perception and movement planning, attention and memory, communication, motivation, and emotion, sleep, continence, and sexuality. The book also introduces key theories and evidence underpinning both behavioural and pharmacotherapeutic interventions used in neurological rehabilitation. The book closes by summarising current principles, underpinning best practice, and also looks to the future by identifying gaps in evidence-based practice, with ideas for future research and what the future may hold for neurological rehabilitation. Throughout, a variety of supplementary information boxes point towards additional material, such as Case Studies which highlight the clinical relevance of topics discussed, and a variety of Research Boxes which refer to more advanced material and/or original research studies. Each chapter ends with self-assessment questions which will check progress and prompt students to reflect.

on how the information presented in the chapter could be applied to clinical practice Written by a multidisciplinary team highly experienced in teaching research and clinical practice Lays the foundation of basic neurosciences for allied health students Accessible and comprehensive text Introduces students to key theories and evidence underpinning neurological rehabilitation Focuses on clinically relevant information End of chapter self assessment questions of different levels of complexity
