Spatial Epidemiology Methods And Applications:

Spatial Epidemiology Paul Elliott, 2000 Spatial epidemiology is concerned with describing quantifying and explaining geographical variations in disease especially with respect to variations in environmental exposures at the small area scale The recent and rapid expansion of the field looks set to continue in line with growing public government and media concern about environment and health issues and a scientific need to understand and explain the effects of environmental pollutants on health This book brings together contributions from an international group of practitioners from a wide spectrum of disciplines including epidemiologists statisticians geographers demographers and pollution modellers providing a comprehensive reference on state of the art methods and applications in the emerging field of spatial epidemiology The book is divided into four sections Section one gives an introduction to spatial epidemiological studies and summarises data requirements and problems with respect to modelling health events including bias and confounding Section two gives an overview of the state of the art in statistical methodology including Bayesian approaches to disease mapping cluster detection analysis of point exposures geostatistical methods and methods for ecological correlation studies Section three gives examples of disease mapping and cluster studies involving mortality data communicable disease data Hodgkins disease diabetes and childhood leukemias Section four reviews methods of exposure assessment for use in spatial epidemiological studies and discusses possible links between exposure and health data in risk assessment and in the effects on human health of traffic related pollution water quality and climate change This book aims to give an authoritative account of current practice and developments in the field As such it should be of interest to epidemiologists public health practitioners statisticians geographers environmental scientists and others concerned with understanding the geographical distribution of disease and the effects of environmental exposures on human health It will be a valuable source for undergraduate and postgraduate courses in epidemiology medical geography biostatistics environmental health and environmental science as well as a useful source of reference for health policy makers health economists regulators and others in the field of environmental health

Statistical Methods in Spatial Epidemiology Andrew B. Lawson, 2013-07-08 Spatial

epidemiology is the description and analysis of the geographical distribution of disease It is more important now than ever with modern threats such as bio terrorism making such analysis even more complex This second edition of Statistical Methods in Spatial Epidemiology is updated and expanded to offer a complete coverage of the analysis and application of spatial statistical methods The book is divided into two main sections Part 1 introduces basic definitions and terminology along with map construction and some basic models This is expanded upon in Part II by applying this knowledge to the fundamental problems within spatial epidemiology such as disease mapping ecological analysis disease clustering bio terrorism space time analysis surveillance and infectious disease modelling Provides a comprehensive overview of the main statistical methods used in spatial epidemiology Updated to include a new emphasis on bio terrorism and disease surveillance

Emphasizes the importance of space time modelling and outlines the practical application of the method Discusses the wide range of software available for analyzing spatial data including WinBUGS SaTScan and R and features an accompanying website hosting related software Contains numerous data sets each representing a different approach to the analysis and provides an insight into various modelling techniques This text is primarily aimed at medical statisticians researchers and practitioners from public health and epidemiology It is also suitable for postgraduate students of statistics and epidemiology as well professionals working in government agencies

Disease Mapping Miguel A. Martinez-Beneito, Paloma

Botella-Rocamora, 2019-07-02 Disease Mapping From Foundations to Multidimensional Modeling guides the reader from the basics of disease mapping to the most advanced topics in this field A multidimensional framework is offered that makes possible the joint modeling of several risks patterns corresponding to combinations of several factors including age group time period disease etc Although theory will be covered the applied component will be equally as important with lots of practical examples offered Features Discusses the very latest developments on multivariate and multidimensional mapping Gives a single state of the art framework that unifies most of the previously proposed disease mapping approaches Balances

epidemiological and statistical points of view Requires no previous knowledge of disease mapping Includes practical sessions at the end of each chapter with WinBUGs INLA and real world datasets Supplies R code for the examples in the book so that they can be reproduced by the reader About the Authors Miguel A Martinez Beneito has spent his whole career working as a statistician for public health services first at the epidemiology unit of the Valencia Spain regional health administration and later as a researcher at the public health division of FISABIO a regional bio sanitary research center He has been also the Bayesian Hierarchical Models professor for several seasons at the University of Valencia Biostatistics Master Paloma Botella Rocamora has spent most of her professional career in academia although she now works as a statistician for the epidemiology unit of the Valencia regional health administration Most of her research has been devoted to developing and applying disease mapping models to real data although her work as a statistician in an epidemiology unit makes her develop and apply statistical methods to health data in general

Air Pollution And Health Jon G Ayres, Robert L Maynard, Roy J Richards, 2006-09-15 This invaluable volume the third in the series Air Pollution Reviews addresses particular questions relating to air pollution and its effect on health It deals with the impact of nasal disease on lung exposure how pollutants are distributed within the lung and the uncertainties with regard to defining the dose to the lung It takes a tangential look at the lung dose by exploring the possibility of obtaining clues from occupational medicine Toxicologically the book examines the possible methodology for exploring how particles and their toxicity can be investigated and looks into the cardio toxic effects of air pollution The effects of pollutant mixtures are compared with those of individual pollutants In addition the question of the importance of acid aerosols is tackled Epidemiologically the book deals with the problems associated with point sources as opposed to diffuse sources of air pollution and considers whether the health effects of air pollution can be adequately quantified These areas though difficult need to be addressed in order to develop our knowledge of the health effects of air pollution In this volume a strong panel of authors treat the issues They have raised questions but at the same time succeeded in solving a number of problems

Geographic Health Data Francis P. Boscoe, 2013-09-23 Focussing on proven techniques for most real world data sets this book presents an overview of the analysis of health data involving a geographic component in a way that is accessible to any health scientist or student comfortable with large data sets and basic statistics but not necessarily with any specialized training in geographic information systems GIS Providing clear straightforward explanations with worldwide examples and solutions the book describes applications of GIS in disaster response

Health in Megacities and Urban Areas Alexander Krämer, Mobarak Hossain Khan, Frauke Kraas, 2011-07-06 Diverse driving forces processes and actors are responsible for different trends in the development of megacities and large urban areas Under the dynamics of global change megacities are themselves changing On the one hand they are prone to increasing socio economic vulnerability due to pronounced poverty socio spatial and political fragmentation sometimes with extreme forms of segregation disparities and conflicts On the other hand megacities offer positive potential for global transformation e g

minimisation of space consumption highly effective use of resources efficient disaster prevention and health care options if good strategies were developed At present in many megacities and urban areas of the developing world and the emerging economies the quality of life is eroding Most of the megacities have grown to unprecedented size and the pace of urbanisation has far exceeded the growth of the necessary infrastructure and services As a result an increasing number of urban dwellers are left without access to basic amenities like clean drinking water fresh air and safe food Additionally social inequalities lead to subsequent and significant intra urban health inequalities and unbalanced disease burdens that can trigger conflict and violence between subpopulations The guiding idea of our book lies in a multi and interdisciplinary approach to the complex topic of megacities and urban health that can only be adequately understood when different disciplines share their knowledge and methodological tools to work together We hope that the book will allow readersto deepen their understanding of the complex dynamics of urban and megacity populations through the lens of public health geographical and other research perspectives

Highly Structured Stochastic Systems Peter J. Green,Nils Lid Hjort,Sylvia Richardson,2003 Highly Structured Stochastic Systems HSSS is a modern strategy for building statistical

models for challenging real world problems for computing with them and for interpreting the resulting inferences Complexity is handled by working up from simple local assumptions in a coherent way and that is the key to modelling computation inference and interpretation the unifying framework is that of Bayesian hierarchical models The aim of this book is to make recent developments in HSSS accessible to a general statistical audience Graphical modelling and Markov chain Monte Carlo MCMC methodology are central to the field and in this text they are covered in depth The chapters on graphical modelling focus on causality and its interplay with time the role of latent variables and on some innovative applications Those on Monte Carlo algorithms include discussion of the impact of recent theoretical work on the evaluation of performance in MCMC extensions to variable dimension problems and methods for dynamic problems based on particle filters Coverage of these underlying methodologies is balanced by substantive areas of application in the areas of spatial statistics with epidemiological ecological and image analysis applications and biology including infectious diseases gene mapping and evolutionary genetics The book concludes with two topics model criticism and Bayesian nonparametrics that seek to challenge the parametric assumptions that otherwise underlie most HSSS models Altogether there are 15 topics in the book and for each there is a substantial article by a leading author in the field and two invited commentaries that complement extend or discuss the main article and should be read in parallel All authors are distinguished researchers in the field and were active participants in an international research programme on HSSS This is the 27th volume in the Oxford Statistical Science Series which includes texts and monographs covering many topics of current research interest in pure and applied statistics These texts focus on topics that have been at the forefront of research interest for several years Other books in the series include J Durbin and S J Koopman Time series analysis by State Space Models Peter J Diggle Patrick Heagerty Kung Yee Liang Scott L Zeger Analysis of Longitudinal Data 2 e J K Lindsey Nonlinear Models in Medical Statistics Peter J Green Nils L Hjort and Sylvia Richardson Highly Structured Stochastic Systems Margaret S Pepe Statistical Evaluation of Medical Tests
