## **Spatial Uncertainty For Ecology Implications For Remote Sensing And Gis Applications:**

*Spatial Uncertainty for Ecology*, 2001-06-29 This is one of the first books to take an ecological perspective on uncertainty in spatial data It applies principles and techniques from geography and other disciplines to ecological research and thus delivers the tools of cartography cognition spatial statistics remote sensing and computer sciences by way of spatial data After describing the uses of such data in ecological research the authors discuss how to account for the effects of uncertainty in various methods of analysis **Spatial Uncertainty in Ecology** Carolyn T. Hunsaker, Michael F. Goodchild, Mark A. Friedl, Ted J. Case, 2013-12-01

The huge growth in the use of geographic information systems remote sensing platforms and spatial databases have made accurate spatial data more available for ecological and environmental models Unfortunately there has been too little analysis of the appropriate use of this data and the role of uncertainty in resulting ecological models This is the first book to take an ecological perspective on uncertainty in spatial data It applies principles and techniques from geography and other disciplines to ecological research It brings the tools of cartography cognition spatial statistics remote sensing and computer sciences to the ecologist using spatial data After describing the uses of spatial data in ecological research the authors discuss how to account for the effects of uncertainty in various methods of analysis Carolyn T Hunsaker is a research ecologist in the USDA Forest Service in Fresno California Michael F Goodchild is Professor of Geography at the University of California Santa Barbara Mark A Friedl is Assistant Professor in the Department of Geography and the Center for Remote Sensing at Boston University Ted J Case is Professor of Biology at the University of California San Diego

*Scaling and Uncertainty Analysis in Ecology* Jianguo Wu, K. Bruce Jones, Harbin Li, Orie L. Loucks, 2006-07-02 Primarily the book draws together a series of important case studies to provide a comprehensive review and synthesis of the most recent concepts theories and methods in scaling and uncertainty analysis It compares current definitions and ideas concerning scale within a coherent framework and examines two key scaling approaches similarity based scaling which is rooted in the idea of similitude or self similarity and dynamic model based scaling which emphasizes processes and mechanisms With case studies focusing on issues ranging from population to ecosystem processes from biodiversity to landscape patterns and from basic research to multidisciplinary management and policy making the book will appeal to both researchers and practitioners working on landscape issues It will also provide a valuable resource for graduate students and professional trainees in ecology environmental policy resource management and global change science

**Environmental Applications of Digital Terrain Modeling** John P. Wilson, 2018-02-15 A digital elevation model DEM is a digital representation of ground surface topography or terrain It is also widely known as a digital terrain model DTM A DEM can be represented as a raster a grid of squares or as a vector based triangular irregular network TIN DEMs are commonly built using remote sensing techniques but they may also be built from land surveying DEMs are used often in geographic information systems and are the most common basis for digitally produced relief maps The terrain surface can be described as comprising of two different elements random and systematic The random stochastic elements are the continuous surfaces with continuously varying relief It would take an endless number of points to describe exactly the random terrain shapes but these can be described in practice with a network of point It is usual to use a network that creates sloping triangles or regular quadrants This book examines how the methods and data sources used to generate DEMs and calculate land surface parameters have changed over the past 25 years The primary goal is to describe the state of the art for

a typical digital terrain modeling workflow that starts with data capture continues with data preprocessing and DEM generation and concludes with the calculation of one or more primary and secondary land surface parameters Taken as a whole this book covers the basic theory behind the methods the instrumentation analysis and interpretation that are embedded in the modern digital terrain modeling workflow the strengths and weaknesses of the various methods that the terrain analyst must choose among typical applications of the results emanating from these terrain modeling workflows and future directions This book is intended for researchers and practitioners who wish to use DEMs land surface parameters land surface objects and landforms in environmental projects The book will also be valuable as a reference text for environmental scientists who are specialists in related fields and wish to integrate these kinds of digital terrain workflows and outputs into their own specialized work environments      **Understanding Forest Disturbance and Spatial Pattern** Michael A.

Wulder, Steven E. Franklin, 2006-07-27 Remote sensing and GIS are increasingly used as tools for monitoring and managing forests Remotely sensed and GIS data are now the data sources of choice for capturing documenting and understanding forest disturbance and landscape pattern Sitting astride the fields of ecology forestry and remote sensing GIS Understanding Forest Disturbanc      *Remote Sensing of Forest Environments* Michael A. Wulder, Steven E. Franklin, 2012-12-06 Remote

Sensing of Forest Environments Concepts and Case Studies is an edited volume intended to provide readers with a state of the art synopsis of the current methods and applied applications employed in remote sensing the world s forests The contributing authors have sought to illustrate and deepen our understanding of remote sensing of forests providing new insights and indicating opportunities that are created when forests and forest practices are considered in concert with the evolving paradigm of remote sensing science Following background and methods sections this book introduces a series of case studies that exemplify the ways in which remotely sensed data are operationally used as an element of the decision making process and in the scientific study of forests Remote Sensing of Forest Environments Concepts and Case Studies is designed to meet the needs of a professional audience composed of both practitioners and researchers This book is also suitable as a secondary text for graduate level students in Forestry Environmental Science Geography Engineering and Computer Science      Comprehensive Geographic Information Systems , 2017-07-21 Geographical Information Systems

Three Volume Set is a computer system used to capture store analyze and display information related to positions on the Earth s surface It has the ability to show multiple types of information on multiple geographical locations in a single map enabling users to assess patterns and relationships between different information points a crucial component for multiple aspects of modern life and industry This 3 volumes reference provides an up to date account of this growing discipline through in depth reviews authored by leading experts in the field VOLUME EDITORSThomas J CovaThe University of Utah Salt Lake City UT United StatesMing Hsiang TsouSan Diego State University San Diego CA United StatesGeorg BarethUniversity of Cologne Cologne GermanyChunqiao SongUniversity of California Los Angeles CA United StatesYan
