Spatial Archaeology:

    Spatial Analysis in Archaeology Ian Hodder,Clive Orton,1976-10-14 This 1976 text is a pioneering study in the applications to archaeology of modern statistical and quantitative techniques The authors show how these techniques when sensitively employed can dramatically extend and refine the information presented in distribution maps and other analyses of spatial relationships Techniques of interpretation by inspection can now be made more powerful and rigorous at the same time interest has turned from the examination of such sites and artefacts as things to the spatial relationships between such things their relationships to one another and to landscape features soils and other resources This book was the first to apply the available techniques systematically to the special problems and interests of archaeologists It also demonstrates to geographers and other social scientists who may be familiar with analogous applications in their own fields the exciting interdisciplinary developments this facilitates for example in studies of exchange networks trade and settlement patterns and cultural history *Spatial Analysis in Archaeology* Ian Hodder,Clive Orton,1976 This 1976 text is a pioneering study in the applications to archaeology of modern statistical and quantitative techniques The authors show how these techniques when sensitively employed can dramatically extend and refine the information presented in distribution maps and other analyses of spatial relationships Techniques of interpretation by inspection can now be made more powerful and rigorous at the same time interest has turned from the examination of such sites and artefacts as things to the spatial relationships between such things their relationships to one another and to landscape features soils and other resources This book was the first to apply the available techniques systematically to the special problems and interests of archaeologists It also demonstrates to geographers and other social scientists who may be familiar with analogous applications in their own fields the exciting interdisciplinary developments this facilitates for example in studies of exchange networks trade and settlement patterns and cultural history *Process and Meaning in Spatial Archaeology* Eric Jones,John Creese,2017-01-21 Process and Meaning in Spatial Archaeology examines Northern Iroquoian archaeology through various lenses at multiple spatial levels including individual households village constructions relationships between villages in a local region and relationships between various Iroquoian nations and their territorial homelands The volume includes scholars and scholarship from both sides of the US Canadian border presenting a contextualized analysis of settlement and landscape for a broad range of past Northern Iroquoian societies The research in this volume represents a new wave of spatial research exploring beyond settlement patterning to the process and the meaning behind spatial arrangement of past communities and people and describes new approaches being used for better understanding of past Northern Iroquoian societies Addressing topics ranging from household task scapes and gender relations to bioarchaeology and social network analysis Process and Meaning in Spatial Archaeology demonstrates the vitality of current archaeological research into ancestral Northern Iroquoian societies and its growing contribution to wider debates in North American archaeology This cutting edge research will be of interest to

   Water Histories and Spatial Archaeology Michael J. Harrower,2016-05-03 This book offers a new interpretation of the spatial political environmental dynamics of water and irrigation in long term histories of arid regions It compares ancient Southwest Arabia 3500 BC AD 600 with the American West 2000 BC AD 1950 in global context to illustrate similarities and differences among environmental cultural political and religious dynamics of water It combines archaeological exploration and field studies of farming in Yemen with social theory and spatial technologies including satellite imagery Global Positioning System GPS and Geographic Information Systems GIS mapping In both ancient Yemen and the American West agricultural production focused not where rain fed agriculture was possible but in hyper arid areas where massive state constructed irrigation schemes politically and ideologically validated state sovereignty While shaped by profound differences and contingencies ancient Yemen and the American West are mutually informative in clarifying human geographies of water that are important to understandings of America Arabia and contemporary conflicts between civilizations deemed East and West   **Space and Spatial Analysis in Archaeology** University of Calgary. Archaeological Association. Conference,Elizabeth C. Robertson,2006 The archaeology of space and place is examined in this selection of papers from the 34th annual Chacmool Archaeological Conference   **Beyond the Map** Gary R. Lock,2000 This set of papers by European and North American archaeologists explore the interface between new spatial technologies and areas of theoretical concern in spatial archaeology Differing aspects of landscape such as vision perception and movement are explored through a series of case studies that focus on how spatial technologies can influence archaeological interpretation and to what extent these new technologies can be manipulated to take us beyond 2 dimensional maps Individual site based analyses and new applications of predictive modelling are also presented and assessed together with the wider questions of spatial technologies within heritage management   **Spatial Approaches in African Archaeology** Cameron Gokee,Carla Klehm,2023-01-01 This book explores the interplay between African archaeology and geospatial methods from three broad perspectives First several contributors examine the technical possibilities and limits of using satellite imagery to detect archaeological sites and model their physical environs A second perspective is the integration of new geospatial data and methods into site and landscape scale analyses to better address questions about social organization and subjective experience in African pasts A final perspective considers the interplay between geospatial technologies and community archaeology in Africa Recognizing that GIS and RS supersede traditional divisions in African archaeology such as different periods geographic regions and theoretical orientations the chapters aim to be widely applicable Arranged by methodological emphasis the case studies move from technical discussions of specific geospatial tools to general applications for addressing

specific sociohistorical topics Each chapter clearly explains the links between their archaeological questions and analytical methods as well as how their results advance our understanding of African pasts and heritage resources Many of the chapters can serve as learning models for archaeologists who are new to GIS or curious about its applications to their work Others represent recent advances in geospatial applications of greater interest to more seasoned GIS practitioners demonstrating the potential for African scholarship to contribute to methodological innovations This book is of interest to students and researchers of African and historical archaeology and anthropology Previously published in African Archaeological Review Volume 37 issue 1 March 2020   Intrasite Spatial Analysis in Archaeology Harold Hietala,Paul A. Larson,1984-11-08 Collection of theoretical discussions and case studies paper by B Spurling and B Hayden seperately annotated   Archaeological Spatial Analysis Mark Gillings,Piraye Hacıgüzeller,Gary Lock,2020-01-16 Effective spatial analysis is an essential element of archaeological research this book is a unique guide to choosing the appropriate technique applying it correctly and understanding its implications both theoretically and practically Focusing upon the key techniques used in archaeological spatial analysis this book provides the authoritative yet accessible methodological guide to the subject which has thus far been missing from the corpus Each chapter tackles a specific technique or application area and follows a clear and coherent structure First is a richly referenced introduction to the particular technique followed by a detailed description of the methodology then an archaeological case study to illustrate the application of the technique and conclusions that point to the implications and potential of the technique within archaeology The book is designed to function as the main textbook for archaeological spatial analysis courses at undergraduate and post graduate level while its user friendly structure makes it also suitable for self learning by archaeology students as well as researchers and professionals **Spatial Archaeology** David L. Clarke,1977   Spatial Technology and Archaeology David Wheatley,Mark Gillings,2003-09-02 Geographical Information Systems GIS and related spatial technologies have a new and powerful role to play in archaeological interpretation Beginning with a conceptual approach to the representation of space adopted by GIS this book examines spatial databases the acquisition and compilation of data the analytical compilation of data the analytical functionality of GIS and the creation and utilization of critical foundation data layers such as the Digital Elevation Model DEM The ways in which GIS can most usefully facilitate archaeological analysis and interpretation are then explored particularly as a tool for the management of archaeological resources Formal analysis of archaeological material and the use of trend surface contouring and interpolation procedures are considered along with predictive modeling analysis of visibility and intervisibility Finally there is a discussion of leading edge issues including three dimensional GIS object oriented GIS the relationship between GIS and Virtual Reality technologies and the integration of GIS with distributed systems and the Internet The approach is light and technical detail is kept to a minimum recognizing that most readers are simply interested in using GIS effectively The text is carefully illustrated with worked case studies using archaeological data Spatial

An Intercontinental Approach** Dustin Keeler,Roderick B. Salisbury,2009-03-26 This book discusses the cultural social and archaeological aspects of space and the impact of spatial concepts in practical archaeological case studies It summarizes recent developments and looks to the future exploring some of the cutting edge ideas in spatial method and theory The past decade has seen significant advances in the tools available for spatial analysis in archaeology and theory and method regarding the spatial character of archaeology must keep pace with these advances Geomorphological and geochemical techniques geographic information systems remotely sensed data virtual reality and electronic survey technology provide new opportunities but also require new ideas This book gives us insight into the ways that people have used space to subsist to recreate their culture in their homelands or in new areas or impose their culture on others Contributors address the way archaeological notions of space and deep time can add to society s understanding of landscape social relationships past environment and cultural heritage The contributions from Europe and North America demonstrate intercontinental connections and explore ways of using dynamic models of spatial patterning to assess human activity within natural and cultural landscapes **Anthropological Archaeology** Guy E. Haining,2003-04-17 Spatial Data Analysis Theory and Practice first published in 2003 provides a broad ranging treatment of the field of spatial data analysis It begins with an overview of spatial data analysis and the importance of location place context and space in scientific and policy related research Covering fundamental problems concerning how attributes in geographical space are represented to the latest methods of exploratory spatial data analysis and spatial modeling it is designed to take the reader through the key areas that underpin the analysis of spatial data providing a platform from which to view and critically appreciate many of the key areas of the field Parts of the text are accessible to undergraduate and master s level students but it also contains sufficient challenging material that it will be of interest to geographers social and economic scientists environmental scientists and statisticians whose research takes them into the area of spatial analysis **Geospatial Technology and the Role of Location in Science** Henk J. continental levels With the advent of Geospatial Technology scholars policymakers and entrepreneurs have valuable tools in hand to proceed This book offers the first systematic account of the science behind this mental and technological revolution Tracing the adoption and dissemination of Geospatial Technology in a range of disciplines it examines the impact this technology has had and is likely to have on the explanation of spatial behaviour phenomena and processes At the same time stressing innovative usage it explores scientific contributions to technology advancement **Spatial Cultures** Sam Griffiths,Alexander von Lünen,2016-06-10 What is the relationship between how cities work and what cities mean Spatial Cultures Towards a New Social Morphology of Cities Past and Present announces an innovative research agenda for urban studies in which themes and methods from urban history social theory and built environment research are brought into dialogue across disciplinary and chronological boundaries The collection confronts the recurrent epistemological impasse that arises between research focussing on the description of material built environments and that which is concerned primarily with the people who inhabit govern and write about cities past and present A reluctance to engage substantively with this issue has been detrimental to scholarly efforts to understand the urban built environment as a meaningful agent of human social experience Drawing on a wide range of historical and contemporary urban case studies as well as a selection of theoretical and methodological reflections the contributions to this volume seek to historically geographically and architecturally contextualize diverse spatial practices including movement encounter play procession and neighbourhood The aim is to challenge their tacit treatment as universal categories in much writing on cities and to propose alternative research possibilities with implications as much for urban design thinking as for history and the social sciences **What Is Archaeology?** Paul Courbin,1988 Reprint Originally published in 1982 by Payot Paris Courbin emphatically argues that the primary task of archaeology is the establishment of facts stratigraphies time sequences and identifications of tools bones potsherds and that archaeology is a distinct discipline separate from history and anthropology Annotation copyrighted by Book News Inc Portland OR Computational Approaches to Archaeological Spaces Andrew Bevan,Mark Lake,2016-06-16 This volume of original chapters written by experts in the field offers a snapshot of how historical built spaces past cultural landscapes and archaeological distributions are currently being explored through computational social science It focuses on the continuing importance of spatial and spatio temporal pattern recognition in the archaeological record considers more wholly model based approaches that fix ideas and build theory and addresses those applications where situated human experience and perception are a core interest Reflecting the changes in computational technology over the past decade the authors bring in examples from historic and prehistoric sites in Europe Asia and the Americas to demonstrate the variety of applications available to the contemporary researcher **Human Ecodynamics in the North Atlantic** Ramona Harrison,Ruth A.
