Spatial Optimization In Ecological Applications:

Spatial Optimization in Ecological Applications John Hof, Michael Bevers, 2002-05-23 Whether discussing habitat placement for the northern spotted owl or black tailed prairie dog or strategies for controlling exotic pests this book explains how capturing ecological relationships across a landscape with pragmatic optimization models can be applied to real world problems Using linear programming Hof and Bevers show how it is possible for the researcher to include many thousands of choice variables and many thousands of constraints and still be quite confident of being able to solve the problem in hand with widely available software The authors emphasis is to preserve optimality and explore how much ecosystem function can be captured stressing the solvability of large problems such as those in real world case studies [Spatial Optimization In Ecological Applications](#)

J. Hof, M. Bevers, **Spatial Optimization in Ecological Applications** John G. Hof, Michael Bevers, 2002 Basic Applied Ecology **Key Topics in Landscape Ecology** Jianguo Wu, Richard J. Hobbs, 2007-03-29

Landscape ecology is a relatively new area of study which aims to understand the pattern of interaction of biological and cultural communities within a landscape This book brings together leading figures from the field to provide an up to date survey of recent advances identify key research problems and suggest a future direction for development and expansion of knowledge Providing in depth reviews of the principles and methods for understanding landscape patterns and changes the book illustrates concepts with examples of innovative applications from different parts of the world Forming a current state of the science for the science of landscape ecology this book forms an essential reference for graduate students academics professionals and practitioners in ecology environmental science natural resource management and landscape planning and design [Handbook of Operations Research in Natural Resources](#) Andres Weintraub, Carlos Romero, Trond Bjørndal, Rafael Epstein, 2007-09-19 Handbook of Operations Research in Natural Resources will be the first systematic handbook treatment of quantitative modeling natural resource problems their allocated efficient use and societal and economic impact Andr s Weintraub is the very top person in Natural Resource research Moreover he has an international reputation in OR and a former president of the International Federation of Operational Research Societies IFORS He has selected co editors who are at the top of the sub fields in natural resources agriculture fisheries forestry and mining The book will cover these areas in terms with contributions from researchers on modeling natural research problems quantifying data developing algorithms and discussing the benefits of research implementations The handbook will include tutorial contributions when necessary Throughout the book technological advances and algorithmic developments that have been driven by natural resource problems will be called out and discussed [Bird Conservation Implementation and Integration in the Americas](#) , 2005

Sustaining Biodiversity and Ecosystem Functions Clement A. Tisdell, 2015-10-30 The stock of the world s biological diversity and the state of its ecosystems are major determinants of the availability of commodities both essential and desirable for human life This leading edge study provides an overarching and balanced approach to the economics of

biological conservation considering man made and natural components and their interdependence Recognising the deficiencies of many contemporary studies which focus almost entirely on natural capital Clement Tisdell utilizes the concept of heritage biological capital including germplasm as part of his analysis of changes in the stock of biological capital This comprehensive synthesis casts doubt upon some propositions and policies for resource conservation recommended by eminent ecologists in areas such as GM crops and livestock husbandry as well as agroecosystems and the concept of sustainable agricultural intensification The propositions presented are lent strength by the author s decision to relate his analysis to pertinent contemporary institutional developments and scientific advances The broad scope and rational scepticism with which this book has been compiled make it an ideal read for economists interested in ecological and environmental economics natural scientists with an interest in biodiversity conservation and higher level policy makers in ecological and environmental fields Complexity Theory for a Sustainable Future Jon Norberg, Graeme

Cumming, 2008-07-11 Complexity theory illuminates the many interactions between natural and social systems providing a better understanding of the general principles that can help solve some of today s most pressing environmental issues Complexity theory was developed from key ideas in economics physics biology and the social sciences and contributes to important new concepts for approaching issues of environmental sustainability such as resilience scaling and networks Complexity Theory for a Sustainable Future is a hands on treatment of this exciting new body of work and its applications bridging the gap between theoretical and applied perspectives in the management of complex adaptive systems Focusing primarily on natural resource management and community based conservation the book features contributions by leading scholars in the field many of whom are among the leaders of the Resilience Alliance Theoreticians will find a valuable synthesis of new ideas on resilience sustainability asymmetries information processing scaling and networks Managers and policymakers will benefit from the application of these ideas to practical approaches and empirical studies linked to social ecological systems Chapters present new twists on such existing approaches as scenario planning scaling analyses and adaptive management and the book concludes with recommendations on how to manage natural resources how to involve stakeholders in the dynamics of a system and how to explain the difficult topic of scale A vital reference for an emerging discipline this volume provides a clearer understanding of the conditions required for systems self organization since the capacity of any system to self organize is crucial for its sustainability over time Toward a Unified Ecology Timothy F. H. Allen, Thomas W. Hoekstra, 2015-06-23 The first edition of Toward a Unified Ecology was ahead of its time For the second edition the authors present a new synthesis of their core ideas on evaluating communities organisms populations biomes models and management The book now places greater emphasis on post normal critiques cognizant of ever present observer values in the system The problem it addresses is how to work holistically on complex things that cannot be defined and this book continues to build an approach to the problem of scaling in ecosystems Provoked by complexity theory the authors add

a whole new chapter on the central role of narrative in science and how models improve them The book takes data and modeling seriously with a sophisticated philosophy of science

Discontinuities in Ecosystems and Other Complex Systems Craig R. Allen, C. S. Holling, 2008-08-05 Following the publication of C S Holling's seminal work on the relationship between animal body mass patterns and scale specific landscape structure ecologists began to explore the theoretical and applied consequences of discontinuities in ecosystems and other complex systems Are ecosystems and their components continuously distributed and do they adhere to scaling laws or are they discontinuous and more complex than early models would have us believe The resulting propositions over the structure of complex systems sparked an ongoing debate regarding the mechanisms generating discontinuities and the statistical methods used for their detection This volume takes the view that ecosystems and other complex systems are inherently discontinuous and that such fields as ecology economics and urban studies greatly benefit from this paradigm shift Contributors present evidence of the ubiquity of discontinuous distributions in ecological and social systems and how their analysis provides insight into complex phenomena The book is divided into three sections The first focuses on background material and contrasting views concerning the discontinuous organization of complex systems The second discusses discontinuous patterns detected in a number of different systems and methods for detecting them and the third touches on the potential significance of discontinuities in complex systems Science is still dominated by a focus on power laws but the contributors to this volume are convinced power laws often mask the interesting dynamics of systems and that those dynamics are best revealed by investigating deviations from assumed power law distributions In 2008 a grand conference on resilience was held in Stockholm hosting 600 participants from around the world There are now three big centers established with resilience the most recent one being the Stockholm Resilience Center with others in Australia an international coral reef center Arizona State University's new sustainability center focusing on anthropology and Canada's emerging social sciences and resilience center Activity continues to flourish in Alaska South Africa and the United Kingdom and a new center is forming in Uruguay

Hierarchical Perspectives on Marine Complexities Spencer Apollonio, 2002-10-30 The Gulf of Maine supports a vital fishery for North America and is one of the most intensely studied marine ecosystems in the world An understanding of its ecology has practical applications to management of other marine systems and fisheries This book is the first application of Hierarchy Theory to the ecological workings of the Gulf of Maine and of marine ecosystems in general Hierarchy Theory offers a perspective that simplifies the apparent complications and contradictions of ecosystems which encompass a number of scales of time from minutes to decades or longer and of space from centimeters to kilometers Spencer Apollonio explores in detail the idea of natural constraints inherent in hierarchical ecosystems and the impact upon such systems when constraints are reduced or removed He argues that conventional fisheries management which practices the removal of these constraints may be doomed to failure Apollonio focuses in particular on the groundfish crisis in the Gulf the precipitous decline due to overfishing in

populations of cod haddock pollock hakes and various types of flounders which have together constituted the mainstay of the Maine fishing industry for centuries Hierarchical Perspectives on Marine Complexities presents a compelling case for a new approach that holds the promise of resource sustainability in the face of enormously complicated natural and cultural forces

geoENV I – Geostatistics for Environmental Applications A.O. Soares,Jaime Gómez-Hernández,Roland

Froidevaux,2013-06-29 GeoENV96 the First European Conference on Geostatistics for Environmental Applications held in Lisbon was conceived to bring together researchers mostly from but not limited to Europe working on environmental issues approached by geostatistical methods Papers were attracted from fields as diverse as hydrogeology biology soil sciences air pollution or ecology It is clear that there is a lot of activity on geostatistics for environmental applications as the collection of papers in this book reveals GeoENV96 was successful in the number and quality of the papers presented which surpassed the initial expectations There is still a large dispersion on the level of application of geostatistics in the different areas To help in spreading the most novel applications of geostatistics across disciplines and to discuss the specific problems related to the application of geostatistics to environmental applications geoENV96 is intended to set the pace and to be the first of a series of biennial meetings The pace is set now let us wait for geoENV98 Lisbon November 1996 The Executive Committee Jaime Gomez Hernandez Roland Froidevaux Amílcar Soares TABLE OF CONTENTS Foreword VII Hydrology Groundwater Groundwater Contaminant Equivalent Transmissivities in Heterogeneous Porous Media under Radially Convergent Flow X Sanchez Vila c L Axness and J Carrera *geoENV VI – Geostatistics for Environmental Applications* Amílcar Soares,Maria João Pereira,Roussos Dimitrakopoulos,2008-03-12 This volume contains 40 selected full text contributions from the Sixth European Conference on Geostatistics for Environmental Applications geoENV IV held in Rhodes Greece October 25 26 2006 The objective of the editors was to compile a set of papers from which the reader could perceive how geostatistics is applied within the environmental sciences A few selected theoretical contributions are also included **Supply-Side Sustainability**

Timothy F. H. Allen,Joseph A. Tainter,Thomas W. Hoekstra,2003-02-19 While environmentalists insist that lower rates of consumption of natural resources are essential for a sustainable future many economists dismiss the notion that resource limits act to constrain modern creative societies The conflict between these views tinges political debate at all levels and hinders our ability to plan for the future Supply Side Sustainability offers a fresh approach to this dilemma by integrating ecological and social science approaches in an interdisciplinary treatment of sustainability Written by two ecologists and an anthropologist this book discusses organisms landscapes populations communities biomes the biosphere ecosystems and energy flows as well as patterns of sustainability and collapse in human societies from hunter gatherer groups to empires to today s industrial world These diverse topics are integrated within a new framework that translates the authors advances in hierarchy and complexity theory into a form useful to professionals in science government and business The result is a much needed blueprint for a cost effective management regime one that makes problem solving efforts themselves sustainable over

time The authors demonstrate that long term cost effective resource management can be achieved by managing the contexts of productive systems rather than by managing the commodities that natural systems produce **geoENV VII -**

Geostatistics for Environmental Applications Peter M. Atkinson,C. D. Lloyd,2010-07-03 This volume brings together selected contributions from geoENV 2008 the 7th International Conference on Geostatistics for Environmental Applications held in Southampton UK It presents the state of the art in geostatistics for the environmental sciences **Wildfire Risk**

Wade E. Professor Martin,Carol Professor Raish,Brian Professor Kent,2010-09-30 The continuing encroachment of human settlements into fire prone areas and extreme fire seasons in recent years make it urgent that we better understand both the physical and human dimensions of managing the risk from wildfire Wildfire Risk follows from our awareness that increasing public knowledge about wildfire hazard does not necessarily lead to appropriate risk reduction behavior Drawing heavily upon health and risk communication and risk modeling the authors advance our understanding of how individuals and communities respond to wildfire hazard They present results of original research on the social economic and psychological factors in responses to risk discuss how outreach and education can influence behavior and consider differences among ethnic racial groups and between genders with regard to values views and attitudes about wildfire risk They explore the role of public participation in risk assessment and mitigation as well as in planning for evacuation and recovery after fire Wildfire Risk concludes with a dedicated section on risk modeling with perspectives from decision sciences geography operations research psychology experimental economics and other social sciences Mathematics and 21st Century Biology National

Research Council,Division on Engineering and Physical Sciences,Board on Mathematical Sciences and Their Applications,Committee on Mathematical Sciences Research for DOE's Computational Biology,2005-07-16 The exponentially increasing amounts of biological data along with comparable advances in computing power are making possible the construction of quantitative predictive biological systems models This development could revolutionize those biology based fields of science To assist this transformation the U S Department of Energy asked the National Research Council to recommend mathematical research activities to enable more effective use of the large amounts of existing genomic information and the structural and functional genomic information being created The resulting study is a broad scientifically based view of the opportunities lying at the mathematical science and biology interface The book provides a review of past successes an examination of opportunities at the various levels of biological systems from molecules to ecosystems an analysis of cross cutting themes and a set of recommendations to advance the mathematics biology connection that are applicable to all agencies funding research in this area *General Technical Report RMRS* ,1998 **Systems Analysis in**

Forest Resources Michael Bevers,Tara M. Barrett,2005 The 2003 symposium of systems analysis in forest resources brought together researchers and practitioners who apply methods of optimization simulation management science and systems analysis to forestry problems This was the 10th symposium in the series with previous conferences held in 1975

1985 1988 1991 1993 1994 1997 2000 and 2002 The forty two papers in these proceedings are organized into five application areas 1 sustainability criteria and indicators and assessment 2 techniques and decision support for forest planning 3 forest assessment and planning case studies 4 fire suppression fire planning and fuels management 5 harvest scheduling and 6 mill supply and forest product markets

Models for Planning Wildlife Conservation in Large Landscapes
Joshua Millsaugh, Frank R. Thompson, 2011-04-28 A single resource volume of information on the most current and effective techniques of wildlife modeling *Models for Planning Wildlife Conservation in Large Landscapes* is appropriate for students and researchers alike The unique blend of conceptual methodological and application chapters discusses research applications and concepts of modeling and presents new ideas and strategies for wildlife habitat models used in conservation planning The book makes important contributions to wildlife conservation of animals in several ways 1 it highlights historical and contemporary advancements in the development of wildlife habitat models and their implementation in conservation planning 2 it provides practical advice for the ecologist conducting such studies and 3 it supplies directions for future research including new strategies for successful studies Intended to provide a recipe for successful development of wildlife habitat models and their implementation in conservation planning the book could be used in studying wildlife habitat models conservation planning and management techniques Additionally it may be a supplemental text in courses dealing with quantitative assessment of wildlife populations Additionally the length of the book would be ideal for graduate student seminar course Using wildlife habitat models in conservation planning is of considerable interest to wildlife biologists With ever tightening budgets for wildlife research and planning activities there is a growing need to use computer methods Use of simulation models represents the single best alternative However it is imperative that these techniques be described in a single source Moreover biologists should be made aware of alternative modeling techniques It is also important that practical guidance be provided to biologists along with a demonstration of utility of these procedures Currently there is little guidance in the wildlife or natural resource planning literature on how best to incorporate wildlife planning activities particularly community based approaches Now is the perfect time for a syntheitic publication that clearly outlines the concepts and available methods and illustrates them Only single resource book of information not only on various wildlife modeling techniques but also with practical guidance on the demonstrated utility of each based on real world conditions Provides concepts methods and applications for wildlife ecologists and others within a GIS context Written by a team of subject area experts
