The Compleat Birdman Peter Haining, 1976

The Flying Machine and Modern Literature Laurence

Goldstein, 1986-11-22 This is the first work to survey the myths created by the modern literary imagination about technology Herbert Sussman succeeds admirably fascinatingly on all counts American Literature a landmark in the study of literary and technological history NMAH fascinating a welcome addition to the growing scholarship about the impact of technology on the modern imagination Journal of Modern Literature Annual Review This book chronicles precisely how the flying machine helped to create two kinds of apocalyptic modes in modern literature

Birds in Flight Carrol L. Henderson, 2008-10-15

They soar and they glide they flap and they flutter they swoop and they plummet Solo or en masse in formation or pas de deux birds in flight are in their element their airborne behavior as varied and distinctive as their plumage In this book wildlife biologist Carrol Henderson a twenty year veteran of bird watching around the globe offers his insights into spotting and identifying birds in flight With 150 of Henderson's exquisite close up photographs of airborne birds as well as diagrams illustrating the principles of flight and detailed information based on firsthand research this book is as informative as it is simply delightful to look at The singular beauty of an iridescent hummingbird pollinating a flower the majesty of a condor soaring above the Andes the impressive spectacle of migrating geese in Minnesota black storks in Kenya or Swainson's hawks in Bolivia in your back yard or far afield this guide lets you enjoy the beauty of birds taking wing while learning the fascinating science of how precisely birds fly

Quest for Flight Gary B. Fogel, Craig S. Harwood, 2012-10-11 The Wright brothers have long received the lion's share of credit for inventing the airplane But a California scientist succeeded in flying gliders twenty years before the Wright's powered flights at Kitty Hawk in 1903 Quest for Flight reveals the amazing accomplishments of John J. Montgomery a prolific inventor who piloted the glider he designed in 1883 in the first controlled flights of a heavier than air craft in the Western Hemisphere Re-examining the history of American aviation Craig S. Harwood and Gary B. Fogel present the story of human efforts to take to the skies They show that history's nearly exclusive focus on two brothers resulted from a lengthy public campaign the Wrights waged to profit from their aeroplane patent and create a monopoly in aviation Countering the aspersions cast on Montgomery and his work Harwood and Fogel build a solidly documented case for Montgomery's pioneering role in aeronautical innovation As a scientist researching the laws of flight Montgomery invented basic methods of aircraft control and stability refined his theories in aerodynamics over decades of research and brought widespread attention to aviation by staging public demonstrations of his gliders After his first flights near San Diego in the 1880s his pursuit continued through a series of glider designs These experiments culminated in 1905 with controlled flights in Northern California using tandem wing Montgomery gliders launched from balloons These flights reached the highest altitudes yet attained demonstrated the effectiveness of Montgomery's designs and helped change society's attitude toward what was considered the impossible art of aerial navigation Inventors and aviators working west of

the Mississippi at the turn of the twentieth century have not received the recognition they deserve Harwood and Fogel place Montgomery's story and his exploits in the broader context of western aviation and science shedding new light on the reasons that California was the epicenter of the American aviation industry from the very beginning Atlantic Fever Joe Jackson, 2012-05-08 For five weeks from April 14 to May 21 1927 the world held its breath while fourteen aviators took to the air to capture the 25 000 prize that Raymond Orteig offered to the first man to cross the Atlantic Ocean without stopping Joe Jackson's *Atlantic Fever* is about this race a milestone in American history whose story has never been fully told Delving into the lives of the big name competitors the polar explorer Richard Byrd the French war hero Ren Fonck the millionaire Charles Levine and the race's eventual winner the enigmatic Charles Lindbergh as well as those whose names have been forgotten by history such as Bernt Balchen Stanton Wooster and Clarence Chamberlin Jackson brings a completely fresh and original perspective to the race to conquer the Atlantic *Atlantic Fever* opens for us one of those magical windows onto a moment when the nexus of technology innovation character and spirit led so many contenders from different parts of the world to be on the cusp of the exact same achievement at the exact same time *Why Don't Jumbo Jets Flap Their Wings?* David Alexander, 2009-06-02 What do a bumble bee and a 747 jet have in common It's not a trick question The fact is they have quite a lot in common They both have wings They both fly And they're both ideally suited to it They just do it differently *Why Don't Jumbo Jets Flap Their Wings* offers a fascinating explanation of how nature and human engineers each arrived at powered flight What emerges is a highly readable account of two very different approaches to solving the same fundamental problems of moving through the air including lift thrust turning and landing The book traces the slow and deliberate evolutionary process of animal flight in birds bats and insects over millions of years and compares it to the directed efforts of human beings to create the aircraft over the course of a single century Among the many questions the book answers Why are wings necessary for flight How do different wings fly differently When did flight evolve in animals What vision knowledge and technology was needed before humans could learn to fly Why are animals and aircrafts perfectly suited to the kind of flying they do David E Alexander first describes the basic properties of wings before launching into the diverse challenges of flight and the concepts of flight aerodynamics and control to present an integrated view that shows both why birds have historically had little influence on aeronautical engineering and exciting new areas of technology where engineers are successfully borrowing ideas from animals *The Flight of Icarus Through Western Art* Karl Kilinski, 2002 Library of Congress Catalogs Library of Congress, 1979 **Subject Catalog, 1977** Library of Congress, 1977 Flight International, 1976 **National Union Catalog**, 1973 Includes entries for maps and atlases *Subject Catalog* Library of Congress, Bibliographic Guide to Technology New York Public Library.
