The History of Information Security Karl Maria Michael de Leeuw, Jan Bergstra, 2007-08-28 Information Security is usually achieved through a mix of technical organizational and legal measures These may include the application of cryptography the hierarchical modeling of organizations in order to assure confidentiality or the distribution of accountability and responsibility by law among interested parties The history of Information Security reaches back to ancient times and starts with the emergence of bureaucracy in administration and warfare Some aspects such as the interception of encrypted messages during World War II have attracted huge attention whereas other aspects have remained largely uncovered There has never been any effort to write a comprehensive history This is most unfortunate because Information Security should be perceived as a set of communicating vessels where technical innovations can make existing legal or organisational frame works obsolete and a breakdown of political authority may cause an exclusive reliance on technical means This book is intended as a first field survey It consists of twenty eight contributions written by experts in such diverse fields as computer science law or history and political science dealing with episodes organisations and technical developments that may considered to be exemplary or have played a key role in the development of this field These include the emergence of cryptology as a discipline during the Renaissance the Black Chambers in 18th century Europe the breaking of German military codes during World War II the histories of the NSA and its Soviet counterparts and contemporary cryptology Other subjects are computer security standards viruses and worms on the Internet computer transparency and free software computer crime export regulations for encryption software and the privacy debate Interdisciplinary coverage of the history Information Security Written by top experts in law history computer and information science First comprehensive work in Information Security

**Information Technology in the Teaching of History** Allan Martin,Lez Smart,David Yeomans,2013-11-26 Information technology offers powerful tools to facilitate and to assist learning across the whole curriculum the computer is certainly the most significant development in educational technology in the twentieth century History may be thought of as a staid and perhaps tradition bound subject more resistant to change than some areas Yet in history too information technology is making an impact This volume shows how information technology is currently contributing to and bringing about changes in the way history is taught and learned The international selection of the contributions shows that these phenomena are not restricted to just one country The impact of information technology on history curricula is explored in depth in one section of the book whilst other sections focus on classroom activities and issues on the development of software for history and on the relevance of current information technology developments But the question which lies at the heart of it all remains that of how information technology can enhance the teacher s ability to offer situations in which learners can form and develop a real understanding of the nature of historical processes and the ways in which they can be studied
