The Horoscope Rollo Ireton, 1903 **Horoscope Construction and Organisation** , The New Manual of Astrology Sepharial, 1898 **The Manual of Astrology, the Standard Work** Sepharial, 2010-09 First published in 1898 this is a very different astrology book from what we have now There are extensive delineations for the signs of the zodiac especially when found on the ascendant There are delineations of planets in signs when they are in the first house or are the chart ruler in both cases describing the physical appearance There are delineations of planets in the various houses which will also serve for the planetary rulerships of the houses There are only sketchy notes on aspects So far as the pure astrology of planets in signs in houses in aspect there is almost nothing at all The reason is found in the second part of the book We are not reading the chart as a psychological abstraction We are instead looking for specific traits attempting to answer specific questions Will we have a profession What kind of marriage What kind of children Will we vanquish our enemies or submit to them What kind of illness We then find the house s of the horoscope which rule the question and then delineate the signs planets we find there These are by the way the sort of questions that clients would ask if they only knew we could give answers The sort of things that astrologers themselves want to know In the process we learn how to read a chart get real meaning from it We get ideas from one section and then apply them to other sections There are hundreds and hundreds of useful aphorisms except that Sepharial doesn t label them as such Get this book study it underline key passages scribble in the margins You will learn more from this book than most all others put together The Construction of Time in Antiquity Jonathan Ben-Dov, Lutz Doering, 2017-10-12 Time has always held a fascination for human beings who have attempted to relate to it and to make sense of it constructing and deconstructing it through its various prisms since time cannot be experienced in an unmediated way This book answers the needs of a growing community of scholars and readers who are interested in this interaction It offers a series of innovative studies by both senior and younger experts on various aspects of the construction of time in antiquity Some articles in this book contain visual material published for the first time while other studies update the field

Ottoman court astrologers and traces their shifting authority and prestige over the long sixteenth century. These individuals served the Ottoman court with their expertise in mathematical, astronomical and astrological sciences, distinguishing themselves from other occult practitioners and esoteric specialists. While both prophecy and prognostication are attempts to map the terrain of the future, the astrologers' work did not claim spiritual weight as a prophecy but relied instead on methods of prediction developed from data and patterns elaborated through technical and scientific writings. Drawing on extensive manuscript and archival records written in Ottoman Turkish, Persian and Arabic, A. Tunen writes a history of science, state formation and bureaucracy within the overarching tale of Ottoman imperial formation and protocols. He invites readers to follow Ottoman court astrologers' fluctuating careers as practitioners of a contentious science and shows how this class of learned individuals constructed its scientific authority despite numerous cultural, societal and epistemic challenges. In understanding the expertise of court astrologers, we gain insight into the intricate social relations established and maintained between the men of knowledge and the men of rule, between expertise and statecraft in the early modern Ottoman imperial context.

Principles of Ashtakavarg Arun Bansal, Our ancient sages Rishis have introduced such a fine method in Horashastra that can help us find out the benignity and malignity of planets and their influence on the life of mankind. They produced a system that can be helpful in finding out the lines and points. The system is called Ashtakavarga. By this system, it is easy to find the good and evil effects of the deeds of a man. Even a learned and well-educated astrologer cannot attain the desired success without the knowledge of Ashtakavarga. It is not possible to find out the benefic and malefic results caused due to the merits and demerits of the horoscope of a person without the knowledge of Ashtakavarg. The author of this book had started studying the system some twenty years back and came to the conclusion that there is no system better than this that could make an accurate prediction. By Ashtakavarga, all the malefic and benefic outcome of the deeds of a man can be found out scientifically. With the help of this system, a minute prediction can be cast. A fine theory of the relation between individual and society is applicable on this system. There can be some differences on the results predicted by Vimshothari and transit on the basis of planets and houses on signs and ascendants. In these circumstances, how can a true prediction be made? That is why the ancient astrologers have advised to use the Ashtakavarga system. It is very hard to find out the effects, time and nature of a planet by the common theories of Falit, but by this system, this is possible. For instance, a planet will enhance the influence related to its own house if it is conjoined with or aspected by benefic planets while situated in its own exalted or friendly sign. This is a widely accepted theory. But the question is what enhancement will take place in the sphere of the said aspect by that particular planet, i.e. what will be the ratio of the benefic and malefic results? It is in this regard that the Ashtakavarga system is considered to be very authentic and decisive. With its help, prediction regarding the ratio of gains, auspicious directions, gains from brothers, results of planets in transit, etc. and the age, wealth, education, wisdom, relation between husband and wife, happiness, property, land, vehicle and deeds of a man can be made easily. *A Portable Cosmos*

Alexander Jones, 2017-01-02 From the Dead Sea Scrolls to the Terracotta Army ancient artifacts have long fascinated the modern world. However, the importance of some discoveries is not always immediately understood. This was the case in 1901 when sponge divers retrieved a lump of corroded bronze from a shipwreck at the bottom of the Mediterranean Sea near the Greek island of Antikythera. Little did the divers know they had found the oldest known analog computer in the world, an astonishing device that once simulated the motions of the stars and planets as they were understood by ancient Greek astronomers. Its remains now consist of 82 fragments, many of them containing gears and plates engraved with Greek words that scientists and scholars have pieced back together through painstaking inspection and deduction aided by radiographic tools and surface imaging. More than a century after its discovery, many of the secrets locked in this mysterious device can now be revealed. In addition to chronicling the unlikely discovery of the Antikythera Mechanism, author Alexander Jones takes readers through a discussion of how the device worked, how and for what purpose it was created, and why it was on a ship that wrecked off the Greek coast around 60 BC. What the Mechanism has uncovered about Greco-Roman astronomy and scientific technology and their place in Greek society is truly amazing. The mechanical know-how that it embodied was more advanced than anything the Greeks were previously thought capable of, but the most recent research has revealed that its displays were designed so that an educated layman could understand the behavior of astronomical phenomena and how intertwined they were with one's natural and social environment. It was at once a masterpiece of machinery as well as one of the first portable teaching devices. Written by a world-renowned expert on the Mechanism, *A Portable Cosmos* will fascinate all readers interested in ancient history, archaeology, and the history of science.
