Cockpit Engineering D.N. Jarrett,2017-03-02 Cockpit Engineering provides an understandable introduction to cockpit systems and a reference to current concepts and research The emphasis throughout is on the cockpit as a totality and the book is accordingly comprehensive The first chapter is an overview of how the modern cockpit has evolved to protect the crew and enable them to do their job The importance of psychological and physiological factors is made clear in the following two chapters that summarise the expectable abilities of aircrew and the hazards of the airborne environment The fourth chapter describes the stages employed in the design of a modern crewstation and the complications that have been induced by automated avionic systems The subsequent chapters review the component systems and the technologies that are utilized Descriptions of equipment for external vision primarily the windscreen canopy and night vision systems are followed by pneumatic inertial and electro mechanical instruments and the considerations entailed in laying out a suite of displays and arranging night lighting Separate chapters cover display technology head up displays helmet mounted displays controls including novel controls that respond directly to speech and the activity of the head eye and brain auditory displays emergency escape and the complex layers of clothing and headgear The last chapter gives the author s speculative views on ideas and research that could profoundly alter the form of the crewstation and the role of the crew Although the focus of the book is on combat aircraft which present the greatest engineering and ergonomic challenges Cockpit Engineering is written for professional engineers and scientists involved in aerospace research manufacture and procurement and for aircrew both civil and military particularly during training It will also be of great interest to university students specialising in aerospace mechanical and electronic engineering and to professional engineers and scientists in the marine automotive and related industries Technical Manual United States Department of the Army,1966 **Airport and Aviation Security**

A Comparison of Cockpit Warning Systems Almon J. Bate,Charles Bates (Jr.),1967 The experiment was designed to compare three types of aircraft cockpit warning systems 1 Visual malfunctions simultaneously activated a master warning light and a specific malfunction indicator light 2 Visual and tone malfunctions simultaneously activated an intermittent sweeping tone through earphones a master warning light and a specific malfunction indicator light 3 Visual and voice malfunctions simultaneously activated a master warning light a specific malfunction indicator light and a voice recording which informed the operator through his earphones of the specific malfunction needing attention Three groups of 11 university students served as subjects While responding to a visual visual tone or visual voice warning system each subject was also required to find and position under cross hairs a series of strategic targets on a strip of rear projected aerial photographic imagery No statistically significant differences among the three warning systems were found in the speed of reaction to the master warning light reaction to the specific indicator panel total reaction time or number of strategic targets found or missed The results of the study suggest that the addition of either a tone or a voice warning to a visual master plus specific malfunction warning system is of questionable value in a heads in cockpit situation where the visual system can be seen The data from the experiment do not suggest that a voice warning system has any advantage over a simple aural signal for augmenting a visual system Author *Report* United States.
