psychoanalysis and film theory Wittenberg links innovations in time travel fiction to specific shifts in the popularization of science from nineteenth century evolutionary biology to twentieth century quantum physics and more recent multiverse cosmologies Wittenberg shows how popular awareness of new science led to surprising innovations in the literary time machine which evolved from a vehicle used for sociopolitical commentary into a psychological device capable of exploring the temporal structure and significance of subjects viewpoints and historical events Time Travel draws on classic works of science fiction by H G Wells Edward Bellamy Robert Heinlein Samuel Delany and Harlan Ellison television shows such as The Twilight Zone and Star Trek and other popular entertainments These are read alongside theoretical work ranging from Einstein Schrödinger Stephen Hawking to Gerard Genette David Lewis and Gilles Deleuze Wittenberg argues that even the most mainstream audiences of popular time travel fiction and cinema are vigorously engaged with many of the same questions about temporality identity and history that concern literary theorists media and film scholars and philosophers

**The long and short of mental time travel-- self-projection over time-scales large and small** James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory propection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of propection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format
