The Computer And Chemistry:

The Computer and Chemistry Thomas R. Dickson, 1968

Chemistry by Computer Stephen Wilson, 2011-11-25

Computers have been applied to problems in chemistry and the chemical sciences since the dawn of the computer age however it is only in the past ten or fifteen years that we have seen the emergence of computational chemistry as a field of research in its own right Its practitioners computational chemists are neither chemists who dabble in computing nor programmers who have an interest in chemistry but computational scientists whose aim is to solve a wide range of chemical problems using modern computing machines This book gives a broad overview of the methods and techniques employed by the computational chemist and of the wide range of problems to which he is applying them It is divided into three parts The first part records the basics of chemistry and of computational science that are essential to an understanding of the methods of computational chemistry These methods are described in the second part of the book In the third part a survey is given of some areas in which the techniques of computational chemistry are being applied As a result of the limited space available in a single volume the areas covered are necessarily selective Nevertheless a sufficiently wide range of applications are described to provide the reader with a balanced overview of the many problems being attacked by computational studies in chemistry

Computer Software Applications in Chemistry Peter C. Computers in Chemical Education and Research E. Ludena,2013-03-09 The impact of computers on all realms of Chemistry has been one of the most important factors in the development of this science during the last years In recognition of this fact in 1971 the First International Conference on Computers in Chemical Research and Education was held at DeKalb Illinois USA A second Conference took place in Ljubljana Yugoslavia in 1973 and this third Conference in Caracas Venezuela in 1976 The aim of these conferences was to provide a high level forum for the leading researchers to exchange information at the frontiers of present day computer applications to the different fields of Chemistry The present Third International Conference on Computers in Chemical Research Education and Technology whose proceedings are published in the present volume was conceived by means of a series of invited lectures as a survey of the present state of the art in some of the most relevant areas of computer applications in Chemistry

The computer and chemistry ; an introduction to programming and numerical methods T. R. Dickson,1968

Knowledge-based Expert Systems in Chemistry Philip Judson,2009 This is currently the only book available on the development of knowledge based and related expert systems in chemistry and toxicology Written by a pioneer in the field it shows how computers can work with qualitative information where precise numerical methods are not satisfactory An underlying theme is the current concern in society about the conflicts between basing decisions on reasoned judgements and wanting precise decisions and measurable effectiveness As well as explaining how the computer programs work the book provides insights into how personal and political factors influence scientific progress The introduction of regulations such as REACH in Europe and modifications to UN and OECD Guidelines on assessment of chemical hazard mean that the use of toxicity prediction is at a turning point They put a heavy burden on the chemical industry but for the first time allow for the use of computer prediction to support or replace in vivo and in vitro experiments There is increasing recognition among scientists and regulators that qualitative computer methods have much to offer and that in some circumstances they may be more reliable and informative than quantitative methods This excellent introduction to a field where employment opportunities are growing is aimed at students scientists and academics with a knowledge of chemistry
