computer science and then considers their further translation into popular culture where they circulate as forms of digital life. He considers among other topics the arithmetization of knowledge that presaged digitization today's multitude of logics, the history of demonstration from deduction to newer forms of persuasion and the post-Chomsky absence of meaning in grammar. With *The Software Arts Sack* invites artists and humanists to see how their ideas are at the root of software and invites computer scientists to envision themselves as artists and humanists. **The Art of Losing Control** Jules Evans, 2017-04-25

Since the Enlightenment western culture has written off ecstatic experience as a form of mental illness. But why should rationality be considered the highest part of human nature when we are capable of so many more states of experience? Piecing together interviews, analysis of ancient and modern philosophy and his own eclectic encounters with the sublime philosopher Jules Evans mounts an investigation into what we can gain from mastering the art of losing control. From Aristotle and Plato to the Bishop of London and Sister Bliss, radical jihadis to Silicon Valley transhumanists, *The Art of Losing Control* is a funny, life-enhancing journey that will change the way you think about how you feel. *The Art of the Motor* Paul Virilio, 1995

The Art of the Motor includes analyses of such recent developments as nanotechnology and virtual reality. It conjures a world in which information is speed and duration is no more. Information as speed. This Paul Virilio tells us is the third dimension of matter: the speed of the transmission of information has collapsed the extension of the dimension of space and the duration of the dimension of time. *The Art of Cyber Conflict* Henry J Sienkiewicz, 2017-06-07

If Sun Tzu were alive today rather than in the fifth century BC, he would be on various stages and his strategies would be all the rage for individuals and organizations alike. In *The Art of Cyber Conflict*, Henry J Sienkiewicz brings his strategic and practical experience to bear as he uses the timeless strategies from Sun Tzu's *The Art of War* in this highly relevant and exceptionally approachable guidebook. From a technology-independent perspective, Henry focuses on knowing and understanding cyber, the cyber environment, the cyber actors and this constantly evolving form of modern conflict while concurrently providing direct approaches to recognize, remediate and resolve the underlying threats. A thought-provoking and earnest view of the current cyber landscape from the classic construct of Sun Tzu. I anticipate it soon will be a key text for War College students as they explore cyber risk management strategies. *Art in the Age of Machine Learning* Sofian Audry, 2021-11-23

An examination of machine learning art and its practice in new media art and music. Over the past decade, an artistic movement has emerged that draws on machine learning as both inspiration and medium. In this book, transdisciplinary artist-researcher Sofian Audry examines artistic practices at the intersection of machine learning and new media art, providing conceptual tools and historical perspectives for new media artists, musicians, composers, writers, curators and theorists. Audry looks at works from a broad range of practices including new media installation, robotic art, visual art, electronic music and sound and electronic literature, connecting machine learning art to such earlier artistic practices as cybernetics art, artificial life art and evolutionary art. Machine learning underlies computational systems that are biologically inspired, statistically driven, agent

based networked entities that program themselves Audry explains the fundamental design of machine learning algorithmic structures in terms accessible to the nonspecialist while framing these technologies within larger historical and conceptual spaces Audry debunks myths about machine learning art including the ideas that machine learning can create art without artists and that machine learning will soon bring about superhuman intelligence and creativity Audry considers learning procedures describing how artists hijack the training process by playing with evaluative functions discusses trainable machines and models explaining how different types of machine learning systems enable different kinds of artistic practices and reviews the role of data in machine learning art showing how artists use data as a raw material to steer learning systems and arguing that machine learning allows for novel forms of algorithmic remixes
