

WHAT IS A **CONSTANT**?

In mathematics, a **constant** refers to a fixed value that does not change throughout a particular equation or problem. *It remains the same regardless of other variables or inputs.*

For example, in the equation $y=3x+5$, the constant is 5 because it always stays the same, while the variable x and its coefficient 3 can vary. Constants are important in mathematical calculations, as they provide stability and serve as reference points for solving equations, graphing functions, and performing various mathematical operations.

The diagram shows the equation $3x + 5$ in large, bold font. The number 3 is black, x is orange, + is black, and 5 is orange. An arrow points from the word "Coefficient" to the number 3. Another arrow points from the word "Constant" to the number 5.

$$\text{Coefficient} \rightarrow 3x + 5 \leftarrow \text{Constant}$$
