The Content Areas Secondary School Reading Instruction:

Secondary School Reading Instruction Betty D. Roe, Barbara D. Stoodt, Paul Clay Burns, 1987 This book has been written primarily for secondary school content teachers those who are preparing for teacher certification and the experienced who wish to learn how to help their students read content assignments with more understanding The book uses introductory level information on reading instruction There is also useful information for reading specialists who work with content teachers or helping secondary students with reading difficulties and administrators who need to know about the reading needs of secondary school students in order to set appropriate policies The aim of this book is to equip secondary school classroom teachers with the tools to teach more efficiently by helping their students understand material better Teachers who can add improvement of reading skills to their toolkit will enhance their success in the classroom

Reading in Secondary Content Areas Zhihui Fang, Mary Schleppegrell, 2008 What does it mean to teach reading in the context of the middle and high school classroom Don't students already know how to read by the time they get to secondary school And how can a busy teacher take time away from the packed curriculum of science history mathematics or language arts to teach reading This book presents a linguistic approach to teaching reading in different subjects an approach that focuses on language itself Central to this approach is a view that knowledge is constructed in and through language and that language changes with changes in knowledge As students move from elementary to secondary schools they encounter specialized knowledge and engage in new contexts of learning in all subjects This means that the language of secondary school learning is quite different from the language of the elementary years While in the elementary years the subject matter of reading materials is often close to students everyday life experiences the curriculum of secondary school deals with knowledge that is removed from students personal lives and everyday contexts The language that constructs this more specialized knowledge thus tends to be more abstract technical information laden and hierarchically organized than the more familiar and friendly language that students typically encounter during the elementary years Students need to develop specialized literacies literacy relevant to each content area as well as a critical literacy they can use across subject areas to engage with reflect on and assess specialized and advanced knowledge This functional language analysis approach is shown using actual secondary social studies science and math textbooks and using a literary text
