Implementing Models of Financial Derivatives Nick Webber, 2011-09-07

Implementing Models of Financial Derivatives is a comprehensive treatment of advanced implementation techniques in VBA for models of financial derivatives Aimed at readers who are already familiar with the basics of VBA it emphasizes a fully object oriented approach to valuation applications chiefly in the context of Monte Carlo simulation but also more broadly for lattice and PDE methods Its unique approach to valuation emphasizing effective implementation from both the numerical and the computational perspectives makes it an invaluable resource The book comes with a library of almost a hundred Excel spreadsheets containing implementations of all the methods and models it investigates including a large number of useful utility procedures Exercises structured around four application streams supplement the exposition in each chapter taking the reader from basic procedural level programming up to high level object oriented implementations Written in eight parts parts 1 4 emphasize application design in VBA focused around the development of a plain Monte Carlo application Part 5 assesses the performance of VBA for this application and the final 3 emphasize the implementation of a fast and accurate Monte Carlo method for option valuation Key topics include Fully polymorphic factories in VBA Polymorphic input and output using the TextStream and FileSystemObject objects Valuing a book of options Detailed assessment of the performance of VBA data structures Theory implementation and comparison of the main Monte Carlo variance reduction methods Assessment of discretization methods and their application to option valuation in models like CIR and Heston Fast valuation of Bermudan options by Monte Carlo Fundamental theory and implementations of lattice and PDE methods are presented in appendices and developed through the book in the exercise streams Spanning the two worlds of academic theory and industrial practice this book is not only suitable as a classroom text in VBA in simulation methods and as an introduction to object oriented design it is also a reference for model implementers and quants working alongside derivatives groups Its implementations are a valuable resource for students teachers and developers alike Note CD ROM DVD and other supplementary materials

Ovaska,2011-10-24 The leading text in the field explains step by step how to write software that responds in real time From power plants to medicine to avionics the world increasingly depends on computer systems that can compute and respond to various excitations in real time The Fourth Edition of Real Time Systems Design and Analysis gives software designers the knowledge and the tools needed to create real time software using a holistic systems based approach The text covers computer architecture and organization operating systems software engineering programming languages and compiler theory all from the perspective of real time systems design The Fourth Edition of this renowned text brings it thoroughly up to date with the latest technological advances and applications This fully updated edition includes coverage of the following concepts Multidisciplinary design challenges Time triggered architectures Architectural advancements Automatic code generation Peripheral interfacing Life cycle processes The final chapter of the text offers an expert perspective on the future of real time systems and their applications The text is self contained enabling instructors and readers to focus on the material that is most important to their needs and interests Suggestions for additional readings guide readers to more in depth discussions on each individual topic In addition each chapter features exercises ranging from simple to challenging to help readers progressively build and fine tune their ability to design their own real time software programs Now fully up to date with the latest technological advances and applications in the field Real Time Systems Design and Analysis remains the top choice for students and software engineers who want to design better and faster real time systems at minimum cost

Clinical Functional MRI Christoph Stippich,2007-12-27 Functional magnetic resonance imaging fMRI permits noninvasive imaging of the human brain at work under physiological conditions This is the first textbook on clinical fMRI It is devoted to preoperative fMRI in patients with brain tumors and epilepsies which are the most well established clinical applications By localizing and lateralizing specific brain functions as well as epileptogenic zones fMRI facilitates the selection of a safe treatment and the planning and performance of function preserving neurosurgery State of the art fMRI procedures are presented with detailed consideration of the physiological and methodological background imaging and data processing normal and pathological findings diagnostic possibilities and limitations and other related techniques All chapters are written by recognized experts in their fields and the book is designed to be of value to beginners trained clinicians and experts alike

Neural Information Processing Chi-Sing Leung,Minho Lee,Jonathan H. Chan,2009-12-15 th This two volume set constitutes the Proceedings of the 16 International Conference on Neural Information Processing ICONIP 2009 held in Bangkok Thailand during December 1 5 2009 ICONIP is a world renowned international conference that is held annually in the Asia Pacific region This prestigious event is sponsored by the Asia Pacific Neural Network Assembly APNNA and it has provided an annual forum for international researchers to exchange the latest ideas and advances in neural networks and related discipline The School of Information Technology SIT at King Mongkut s University of Technology Thonburi KMUTT

Bangkok Thailand was the proud host of ICONIP 2009 The conference theme was Challenges and Trends of Neural Information Processing with an aim to discuss the past present and future challenges and trends in the field of neural information processing ICONIP 2009 accepted 145 regular session papers and 53 special session papers from a total of 466 submissions received on the Springer Online Conference Service OCS system The authors of accepted papers alone covered 36 countries and gions worldwide and there are over 500 authors in these proceedings The technical sessions were divided into 23 topical categories including 9 special sessions

Ordaining Reality Joseph E. Donlan,2008-02 Many people believe in the Power of Positive Thinking but until now no one has credibly explained how it works It has been this author s mission for 30 years to develop a plausible theory to support how mere thoughts can tangibly influence future events In this book the author presents a paradigm which shows how our right brain hemisphere can tap into a hidden domain which can influence the world around us To accomplish this he takes the reader through the subject of physics as it is known today and points out its recognized flaws and problems He then introduces and explains Eastern Philosophy and ties it into Western Physics In conjunction with this broadened view he explains how the human brain developed to comprehend both the Eastern and Western views of reality He then ties all of these notions into a new view of nature which supports the premise that the future can be created with thoughts In the final analysis he brings his readers through the necessary steps to put this knowledge to work to help them ordain their own reality

Handbook of Computational Neurodegeneration Panagiotis Vlamos,Ilias S. Kotsireas,Ioannis Tarnanas,2023-07-25 The Handbook of Computational Neurodegeneration provides a comprehensive overview of the field and thus bridges the gap between standard textbooks of research on neurodegeneration and dispersed publications for specialists that have a narrowed focus on computational methods to study this complicated process The handbook reviews the central issues and methodological approaches related to the field for which the reader pursues a thorough overview It also conveys more advanced knowledge thus serving both as an introductory text and as a starting point for an in depth study of a specific area as well as a quick reference source for the expert by reflecting the state of the art and future prospects The book includes topics that are usually missing in standard textbooks and that are only marginally represented in the specific literature The broad scope of this handbook is reflected by five major parts that facilitate an integration of computational concepts methods and applications in the study of neurodegeneration Each part is intended to stand on its own giving an overview of the topic and the most important problems and approaches which are supported by examples practical applications and proposed methodologies The basic concepts and knowledge standard procedures and methods are presented as well as recent advances and new perspectives

Fuzzy Data Warehousing for Performance Measurement Daniel Fasel,2014-07-08 The numeric values retrieved from a data warehouse may be difficult for business users to interpret and may even be interpreted incorrectly Therefore in order to better understand numeric values business users may require an interpretation in meaningful non numeric terms However if the transition between non numeric terms is crisp true values cannot be measured and a smooth transition between classes may no longer be possible This book addresses this problem by presenting a fuzzy classification based approach for a data warehouses Moreover it introduces a modeling approach for fuzzy data warehouses that makes it possible to integrate fuzzy linguistic variables in a meta table structure The essence of this structure is that fuzzy concepts can be integrated into the dimensions and facts of an existing classical data warehouse without affecting its core This allows a simultaneous analysis both fuzzy and crisp A case study of a movie rental company underlines and exemplifies the proposed approach
