Physics of the Solar System B. Bertotti, P. Farinella, D. Vokrouhlicky, 2012-12-06 This book is a direct sequel to B Bertotti and P Farinella Physics of the Earth and the Solar System Dynamics and Evolution Space Navigation Space Time Structure Kluwer Academic Publishers 1990 Nearly 15 years after its publication it became evident that the volume was in need of a new edition to keep up with the outstanding progress and the changing perspectives in this field David Vokrouhlicky agreed to collaborate on the project and be the third author On March 25 2000 after a long illness and a heart transplant Paolo Farinella passed away We then decided that rather than aiming at a second edition it made more sense to rewrite the book anew While its basic content and the structure of the chapters are the same important new topics have been added including the extrasolar planetary systems transneptunian objects accurate determination of reference frames and new space projects Greater relevance has been given to semi-quantitative discussions before introducing formal developments many figures have been added and updated and several errors corrected More emphasis has been given to the solar system whereas geophysical topics have been left at a less advanced level To mark this change the slightly different title Physics of the Solar System was chosen We wish to dedicate this book to the memory of Paolo Farinella an outstanding scientist an invaluable collaborator and a dear friend
