The Computer Users Yearbook 1999:

Official Gazette of the United States Patent and Trademark Office ,2004 *Factors Correlating with Teachers' Use of Computers in the Classroom* Samia A. Wahab,2008-11-11 There is a need to understand the factors correlating with teachers instructional use of computers because much of the present research focuses on students rather than teachers This study examines several factors relating to the use of computers in the classroom by teachers The factors examined include teacher attitudes emotions beliefs and outside influences This was done by a review of the present literature administering two surveys and analyzing the survey data Questionnaires were distributed to faculty at five randomly selected high schools in a Midwest city participating in the study Data from the survey was then examined to determine which factors correlate with teacher computer use in the classroom The results of this study will help improve understanding of teachers instructional computer use **Toys, Games, and Media** Jeffrey Goldstein,David Buckingham,Gilles Brougere,2004-09-10 This book is a state of the art look at where toys have come from and where they are likely to go in the years ahead The focus is on the interplay between traditional toys and play and toys and play that are mediated by or combined with digital technology As well as covering the technical aspects of computer mediated play activities the authors consider how technologically enhanced toys are currently used in traditional play and how they are woven into childrens lives The authors contrast their findings about technologically enhanced toys with knowledge of traditional toys and play They link their studies of toys to goals in education and to entertainment and information transfer This book will appeal to students researchers teachers child care workers and more broadly the entertainment industry It is appropriate for courses that deal with the specialized subject of toys and games media studies education and teacher training and child development **From Oracle Bones to Computers** Baotong Gu,2009-03-25 From Oracle Bones to Computers not only provides a succinct yet in depth account of the development of writing technologies in the five thousand years of China s history but also develops an operationalized model of rhetorical analysis that can be applied to the study of any writing technology development *Media Convergence Handbook - Vol. 2* Artur Lugmayr,Cinzia Dal Zotto,2016-05-11 The Media Convergence Handbook sheds new light on the complexity of media convergence and the related business challenges Approaching the topic from a managerial technological as well as end consumer perspective it acts as a reference book and educational resource in the field Media convergence at business level may imply transforming business models and using multiplatform content production and distribution tools However it is shown that the implementation of convergence strategies can only succeed when expectations and aspirations of every actor involved are taken into account Media consumers content producers and managers face different challenges in the process of media convergence Volume II of the Media Convergence Handbook tackles these challenges by discussing media business models production and users experience and perspectives from a technological convergence viewpoint **Learning and Teaching with Technology in the Knowledge Society** Mizuho Iinuma,2015-11-24 This book discusses

learning and teaching with modern technology in the new knowledge society It focuses specifically on new literacy and technology in classroom environments Based on a social constructivist approach this book covers a wide range of new technology use examples such as participatory media video recording systems and 3D computer graphics A case study on a constructivist approach to teaching and learning especially CSCL computer supported collaborative learning is discussed from a practical perspective for educators It also includes specific in class practices with detailed accounts of curricula featuring readily accessible yet new technology available for classroom use such as Google Sketchup 3D computer models

Kathleen Heid,Glendon W. Blume,2008-07-01 According to NCTM s Principles and Standards for School mathematics Technology is essential in teaching and learning of mathematics it influences the mathematics that is taught and it enhances students learning How does research inform this clarion call for technology in mathematics teaching and learning In response to the need to craft appropriate roles for technology in school mathematics new technological approaches have been applied to the teaching and learning of mathematics and these approaches have been examined by researchers world wide The first volume provides insight into what research suggests about the nature of mathematics learning in technological environments Included in this volume are syntheses of research on technology in the learning of rational number algebra elementary and secondary geometry mathematical modeling and calculus Additional chapters synthesize research on technology in the practice of teaching and on equity issues in the use of technology in mathematics instruction Instead of simply reporting achievement scores of students who use technology in their learning authors provide thoughtful analyses of bodies of research with the goal of understanding the ways in which technology affects what and how students learn Each of the chapters in this volume is written by a team of experts whose own research has provided important guidance to the field Effective Learning and Teaching in Mathematics and Its Applications Peter Kahn,Joseph Kyle,2003-12-16 An exploration of the key issues in the

teaching of mathematics a key subject in its own right and one that forms an important part of many other disciplines

   The Use of Force in International Law Nicholas Tsagourias,2017-07-05 This volume of essays examines the development of political and legal thinking regarding the use of force in international relations It provides an analysis of the rules on the use of force in the political normative and factual contexts within which they apply and assesses their content and relevance in the light of new challenges such as terrorism weapons of mass destruction and cyber attacks The volume begins with an overview of the ancient and medieval concepts of war and the use of force and then concentrates on the contemporary legal framework regulating the use of force as moulded by the United Nations Charter and state practice In this regard it discusses specific issues such as the use of force by way of self defence armed reprisals forcible reactions to terrorism the use of force in the cyberspace humanitarian intervention and the responsibility to protect This collection of previously published classic research articles is of interest to scholars and students of international law and international relations as well as practitioners in international law   *Choice and Preference in Media Use* Silvia Knobloch-Westerwick,2014-07-25 Mediated messages flood our daily lives through virtually endless choices of media channels genres and content However selectivity determines what media messages we attend to and focus on The present book examines the factors that influence this selectivity Seminal books on selective media exposure were published in 1960 by Klapper and in 1985 by Zillmann and Bryant But an integrated update on this research field is much needed as rigorous selective exposure research has flourished in the new millennium In the contexts of political communication health communication Internet use entertainment consumption and electronic games the crucial question of how individuals choose what content they consume has garnered much attention The present book integrates theories and empirical evidence from these domains and discusses the related research methodologies In light of the ever increasing abundance of media channels and messages selective exposure has become more important than ever for media impacts This monograph provides a comprehensive review of the research on selective exposure to media messages which is at the heart of communication science and media effects It is required reading for media scholars and researchers and promises to influence and inspire future research   **Resources in Education** ,2001   **Human Centric Technology and Service in Smart Space** James J. (Jong Hyuk) Park,Qun Jin,Martin Sang-soo Yeo,Bin Hu,2012-07-26 The theme of HumanCom is focused on the various aspects of human centric computing for advances in computer science and its applications and provides an opportunity for academic and industry professionals to discuss the latest issues and progress in the area of human centric computing In addition the conference will publish high quality papers which are closely related to the various theories and practical applications in human centric computing Furthermore we expect that the conference and its publications will be a trigger for further related research and technology improvements in this important subject   **Current Index to Journals in Education** ,2001   **Bridging the Digital Divide** Angathevar Baskaran,2006-01-31 The impressive advances of

information and communication technologies ICT in some Asian countries have led some people to proclaim a fundamental change in the world economy It is essential still to study the experience of developing countries thoroughly and critically The authors and editors have made an admirable contribution to make such an evaluation and fill a big gap in our knowledge But it is still relatively difficult to find reliable information about the changes taking place in China or any other developing country One of the many good features of this evaluation is that it takes into account the specific relationship of ICT with the wider social and economic system and the national system of innovation of each country   *Vanishing Borders* Hilary French,2016-06-11 The world is shrinking faster than ever Goods money microbes pollution people and ideas are crossing boundaries ever more frequently The implications for our future and for the health of the planet are profound Vanishing Borders outlines the ecological challenges posed and then goes on to define the necessary strategies for tackling them Presently national governments are singularly ill equipped for tackling transitional environmental problems from ozone depletion to soaring trade in commodities such as timbre problems which are climbing ever higher on the international political agenda Industrial and developing countries are on a collision course over climate change and water shortages are creating tensions in several parts of the world The author argues that only a worldwide commitment to strengthening treaties and institutions needed to integrate ecological considerations into the rules of global commerce holds out hope Over 200 international environmental treaties exist but most need more stringent conditions and enforcement and continuing support from NGO and business communities Significantly the digital revolution integral in itself to processes to globalization offers channels through which powerful coalitions can effect change The book provides a compelling and accessible analysis and a clear plan of action in pursuit of environmental stability Originally published in 2000   **Theory and Applications of Ontology: Computer Applications** Roberto Poli,Michael Healy,Achilles Kameas,2010-09-02 Ontology was once understood to be the philosophical inquiry into the structure of reality the analysis and categorization of what there is Recently however a field called ontology has become part of the rapidly growing research industry in information technology The two fields have more in common than just their name Theory and Applications of Ontology is a two volume anthology that aims to further an informed discussion about the relationship between ontology in philosophy and ontology in information technology It fills an important lacuna in cutting edge research on ontology in both fields supplying stage setting overview articles on history and method presenting directions of current research in either field and highlighting areas of productive interdisciplinary contact Theory and Applications of Ontology Computer Applications presents ontology in ways that philosophers are not likely to find elsewhere The volume offers an overview of current research in ontology distinguishing basic conceptual issues domain applications general frameworks and mathematical formalisms It introduces the reader to current research on frameworks and applications in information technology in ways that are sure to invite reflection and constructive responses from ontologists in philosophy   Advanced Topics in End User Computing Mo Adam

Mahmood,2003-01-01 Features the latest research findings dealing with end user computing concepts issues and trends Empirical and theoretical research concerned with all aspects of end user computing including development utilization and management are included
