While We Sleep Sam Dickinson, 2020-02-16 Dreams are a normal part of sleep Whether you remember them or not Everyone dreams for a total of about two hours per night and dreams can occur during any stage of sleep although they're most vivid during the REM phase If you've ever woken up from a happy dream feeling relaxed and rested or a scary one feeling on edge you might have wondered whether the content of your shut eye reveries can make a difference in your overall sleep quality Dream content often relates back to what's happening in your waking life If you're experiencing low stress and plenty of satisfaction in your day to day life you may have more positive dreams By contrast if you're depressed or anxious during the day you may have more unpleasant dreams and compromised sleep quality at night The good news is that while you cannot control your dreams directly you can work on improving your state of mind during the day This book investigates theories concerning the function of dreams and dreaming starting with the contributions made

by Freud to the present day Several theories within psychodynamic evolutionary and neurocognitive perspectives are presented and discussed in light of relevant empirical research These include theories that postulate that the function of dreaming is to guard sleep and theories which propose that dreaming poses an adaptive advantage either by allowing for the simulation and rehearsal of threat avoidance behaviors practicing social skills solving emotional or intellectual problems or aids us in the consolidation of memories

The Twenty-four Hour Mind Rosalind D. Cartwright, 2010-06-24 Leading sleep researcher Rosalind Cartwright brings together decades of work on sleep dreaming and sleep disorders to propose a new theory of how the mind works continuously Drawing on her own research and that of others Cartwright describes how conscious and unconscious thoughts and feelings move forward from waking into sleep and dreaming to the next waking day One main purpose of sleep is to regulate disturbing emotions Not everyone does this successfully every night Her research on dreams of those suffering depression show these fail to regulate mood overnight and when sleepwalkers behave aggressively they have not had enough time dreaming With many case examples the author illustrates how conscious and unconscious thoughts and feelings are being linked to older memories throughout sleep and dreams and how this process effects changes in thinking and feeling the next day even reshaping our identities The Twenty four Hour Mind offers a unique
