The Past and the Future of Human Immunity Under Viral Evolutionary Pressure Gkikas Magiorkinis, Tara P. Hurst, 2019-12-04 There is a long standing evolutionary battle between viruses and their hosts that continues to be waged The evidence of this conflict can be found on both sides with the human immune system being responsive to new viral challenges and viruses having developed often sophisticated countermeasures The arms race between viruses and hosts can be thought as an example of the Red Queen race an evolutionary hypothesis inspired from the dialogue of Alice with the Red Queen in Lewis Carroll's *Through the Looking Glass* At the same time viruses have a minimal genomic content as they have evolved to hitchhike biological machinery of their hosts or other co-infecting viruses The minimalistic viral genome could be thought as the result of a Black Queen evolution a theory inspired from the card game *Hearts* where the winner is the one with the fewest points at the end The effects of this arms race are evident in the evolution of the human immune system This system is capable of responding to diverse viral challenges utilizing both the ancient innate immune system and the more recently evolved adaptive immune system of jawed vertebrates It is now well known that the two systems are linked with innate immunity hypothesized to have provided raw material for the emergence of the adaptive immune response The adaptive immune response comprises several protein families including B and T cell receptors MHC and KIR proteins for example that are encoded by complex and variable genomic regions This complexity enables for responsive genetic changes to occur in immune cells such as the ability of genomic hypervariable regions in B cells to recombine in order to produce more specific antibodies Indeed the human immune system is thought to be continually evolving via various mechanisms such as changes in the genes encoding immune receptors and the regulatory sequences that control their expression For example there is some evidence that exogenous viral infections can alter the expression of endogenous retroviruses some of which contribute to the immune response Viral countermeasures can include encoding decoy receptors for the signalling molecules of the immune response altering the gene expression of adaptive immune cells during chronic infection or using host enzymes to facilitate viral immune escape As the articles herein show the immune system continues to be challenged by viral infections and these challenges continue to shape how the immune system combats pathogens thus viruses and human immunity are continuously part of Red and Black Queen evolutionary dynamics We had the pleasure of working with Jonas Blomberg as a reviewer during the course of the Research Topic and his untimely passing was a great loss Prof Blomberg made significant contributions including to the nomenclature of endogenous retroviruses ERVs the evolution and characterization of specific human ERV HERV and the contribution of ERVs to diseases such as cancer It is with great respect for his contributions to the ERV field that we dedicate this eBook to his memory

Soils of the Past Gregory J. Retallack,2012-12-06 Landscapes viewed from afar have a timeless quality that is soothing to the human spirit Yet a tranquil wilderness scene is but a snapshot in the steady stream of surficial change Wind water and human activities reshape the landscape by means of gradual to catastrophic and usually irreversible events Much of this change destroys past landscapes but at some times and places landscapes are buried in the rock record This work is dedicated to the discovery of past landscapes and their life through the fossil record of soils A long history of surficial changes extending back almost to the origin of our planet can be deciphered from the study of these buried soils or paleosols Some rudiments of this history and our place in it are outlined in a final section of this book But first it is necessary to learn something of the language of soils of what happens to them when buried in the rock record and which of the forces of nature can be confidently reconstructed from their remains Much of this preliminary material is borrowed from soil science but throughout emphasis is laid on features that provide most reliable evidence of landscapes during the distant geological past This book has evolved primarily as a text for senior level university courses in paleopedology the study of fossil soils

Remains of the Past in Old English Literature Jan-Peer Hartmann, 2025-02-11 Argues for a new understanding of Old English responses to materiality and historical change Human communities have interacted with the material remains of earlier periods for millennia Such archaeological objects including bones coins weapons building materials and architectural landmarks were physically handled reused transformed and reinterpreted they were also depicted in literature This book examines how Old English texts imagine such human encounters with the remnants of the past It explores Elene's perspective on the discovery of the True Cross as a narrative of political spiritual and epistemic translatio and the multiple ways in which The Wanderer and The Ruin use images of ruins and the poetic formula work of giants to construct an unknown and unrecoverable past it also considers the engagements with untimely objects in Beowulf and the Anonymous Old English Legend of the Seven Sleepers and how the Ruthwell Cross Poem and The Dream of the Rood play off figural against literal history As this study demonstrates Old English texts combined and creatively adapted a broad variety of ways of conceptualizing not merely history but indeed the very processes by which historical thought operates Its careful readings show that these texts not only display a deep and conflicted understanding of the philosophical implications of viewing history and temporality through the prism of material objects but also exhibit a powerful capacity for expressing such an understanding through aesthetic strategies
