*From Pathology to Politics* James T. Bennett, Thomas J. Di Lorenzo, 2000 Barely a day goes by without news of the latest public health threat from the American media Some of us are told we live in a cancer cluster an area with a disproportionate

number of cancer deaths During the summer months those who live in or near urban areas are bombarded with daily smog measurements and air pollution alerts City water supplies are frequently called health hazards At times it seems as though virtually everything we eat and drink is denounced as bad for us by some public health expert Our cars burn too much gasoline we own too many firearms we are too fat some of us are too skinny Americans today are living longer than they ever have before Why the almost daily announcements of new public health threats and proclamations of impending crises Bennett and DiLorenzo address this question and others here They begin by examining the large public health bureaucracy its preoccupation with expanding governmental programs and its concern with political issues that too often have little to do with improving public health Then they trace the evolution of the American public health movement from its founding after the Civil War to the 1950s They describe the transformation of public health's focus from the eradication of disease to social policy as a by product of the 1960s Bennett and DiLorenzo catalogue the radicalization of the public health movement by discussing its numerous political initiatives They include case studies of the politicization of the public health movement in America The authors reveal various methods of statistical manipulation that certain public health researchers use to cook the data in order to achieve politically correct results A final chapter discusses the implications of the transformation of public health from pathology to politics This vigorously argued analysis sees the public health movement as claiming expertise on virtually every social issue from poverty to human rights Students of public policy and public health officials along with readers interested in public health issues will find this absorbing reading Designing Government F. Pearl

A. W. Rhodes, R. Kent Weaver, 2024-06-24 From coping with Covid 19 through to manging climate change from Brexit through to the barricading of Congress from democratic disaffection to populist pressures from historical injustices to contemporary social inequalities and from scapegoating through to sacrificial lambs the common thread linking each of these themes and many more is an emphasis on blame But how do we know who or what is to blame How do politicians engage in blame avoidance strategies How can blaming backfire or boomerang Are there situations in which politicians might want to be blamed What is the relationship between avoiding blame and claiming credit How do developments in relation to machine learning and algorithmic governance affect blame based assumptions By focusing on the politics and governance of blame from a range of disciplines perspectives and standpoints this volume engages with all these questions and many more Distinctive contributions include an emphasis on peacekeeping and public diplomacy on source credibility and anthropological explanations on cultural bias and on expert opinions on polarisation and de politicisation and on trust and post truth politics With contributions from the world s leading scholars and emerging research leaders this volume not only develops the theoretical disciplinary empirical and normative boundaries of blame based analyses but it also identifies new research agendas and asks distinctive and original questions about the politics and governance of blame Brief Tests of Collection Strength Howard D. White, 1995-09-26 For purposes of accreditation resource sharing and institutional mission librarians need to assess the strengths of their collections in particular subject areas This book describes and illustrates a brief test for determining a library s collection strength Though such tests are most often employed in academic libraries the methodology outlined by the author should be useful to all types of libraries in assessing the strength of their holdings In a time of increasing material and limited resources libraries need to be particularly judicious in deciding which works to acquire Oftentimes a library seeks to develop strong holdings in one or more subject areas Such an approach is especially useful for libraries that share their resources with other institutions To plan their acquisitions carefully and to be of greatest use to
