The People Side Of Systems:

The People Part Annie Hyman Pratt, 2022-04-26 In the spirit of The One Thing and Start with Why this guide provides the missing link for entrepreneurs to generate fast sustainable growth get out of the weeds and build their A teams from the inside out Success in business today means responding to change at an ever increasing pace due to factors such as competition evolving technology and increasing client expectations Delivering more value with fewer resources is the name of the game However in this environment even when a business is winning the leaders and teams playing the game often feel like they are losing plagued by overwhelm and burnout Most business books try to address this problem with systems structures and values What's missing The People Part the often misunderstood area of a business where leaders and team members do the actual thinking interacting and performing together Drawing on Annie's 30 years of working with humans in business this dynamic and engaging book outlines seven easy to implement agreements to build a high performance team You'll learn how to Lead in a way that supports others to perform at their best by strengthening your own Self Leadership Generate a leadership reputation where the best A Players seek to work with you and stay for the long term Create psychological safety the environment that empowers team members to collaborate at the highest levels Develop leaders and team members to take on responsibilities with the same commitment level as the owners Supercharge your team productivity with Annie's signature tools Put the seven agreements to work and see improvements right away If you're an entrepreneur just starting out a CEO trying to get out of the weeds to work on rather than in your business a leader who needs a breakthrough for themselves and their team or a team member wanting to make your best contribution yet then The People Part is for you

Hermeneutics in Agile Systems Development Dr. Jerome Heath, 2016-01-01 Agile is the new world view of systems development Structured design is being relegated to systems that have a short development time the way to develop the software is already known there is no need for design and the system will not change in any way during the design Agile methodologies have been developed over time from developers experiencing success by rejecting the ideas of the structured methodology and the waterfall style of project management The main strengths of Agile methods are Visibility through the looking glass Adaptability context calculus Business Value incrementally increasing the value Less Risk changes are made on a Just In Time bases The biggest problems with the waterfall techniques are Risky and expensive Inability to deal with changing requirements Problems with late integration Always required extensive rework to make software usable Business advantages of Agile development Benefits can be realized early First to market and early and regular releases Testing is integrated so there is early recognition of any quality issues Excellent visibility for key stakeholders ensures expectations are managed Customer satisfaction through project visibility customers own the project Incremental releases reduce risks Change is accepted even expected Cost control

the scope and features are variable not the cost Developers feel that they are part of the project and enjoy doing the work In any form of agile development you are using post modernist methodologies Agile is post modern or post structural Agile and quality productivity are the most effective post modernist movements Older development methodologies used some rather regulated processes of analyzing the information of a system In fact they were using hermeneutic since hermeneutics is analysis of information But their methodology put thought fences around this analysis This book is proposing using all the powers of hermeneutics in developing software In particular I include the methods developed in post structuralist hermeneutics So we study the system to determine what artifacts are present and how they might fit together in a new system This process is called archeological layering and renders artifacts that are associated in layers that belong together in the new system This provides us with the meanings we need for the system As we have completed this archeological layering in our present cycle we need to redefine the artifacts and their association to each other into what they will become as useful parts of the new system I call this Formation Data Context It is a study if the formation of data through the system we are building It combines the new data to data already analyzed for formation data context This process requires recognizing how definitions of terms and even the understanding of meanings is important to making a system useful Thus we base our development of these understandings on pragmatism This ultimately leads us in developing a system that is useful This gives the developer a more complete understanding of the meaning of the information about the system from a proper use of hermeneutics The process of using the more modern methodologies of hermeneutics also provides a more useful way of putting the information back together in the new system developed out of the project Dr Jerome Heath Ph D p p1 margin 0 0px 0 0px 0 0px 0 0px font 12 0px Times color 000000 webkit text stroke 000000 p p2 margin 0 0px 0 0px 0 0px 0 0px font 12 0px Times color 000000 webkit text stroke 000000 min height 14 0px span s1 font kerning none
