Experimental Investigations on Joining Techniques for Paper Structures Evgenia Kanli, 2021-08-26 The background of this research is related to innovative lightweight construction methods for short term applications realized with highly recyclable materials produced from renewable resources Specifically the possibility of using selected paper based products for design purposes is examined The main topic discussed regards the state of the art and future potential of joining techniques for assemblies and structures designed with paper based products In this context the preference on paper tubes for a variety of designs is examined closely A collection of case studies for selected joining techniques supported with digital tools fabrication of prototypes and targeted structural experiments demonstrates possibilities and considerations This book presents the research process and aims to inspire architects designers and engineers who are eager to discuss on material innovation and the steps that need to be taken to examine the feasibility of such ideas *The Paper Mill and Wood Pulp News*, 1899

Qualification for Computer-Integrated Manufacturing Felix Rauner, 2012-12-06 In this paper a nearly perfected concept of basic training in the field of Computer Integrated Manufacturing CIM has been explained With the help of detailed studies conducted in part by the Department of Technology and Education Department of Mechanical and Industrial Engineering University of Dortmund the necessity of basic training at all levels for employees in Computer Integrated Manufacturing was verified Then the new requirements for employees were indicated with respect to the ability to act Moreover the didactic demands of the concept for basic subject specific training were clearly stipulated In summary this concept has to include the invariant indispensable fundamental and exemplary contents and the basic options of CIM work organisation which are most important today and in the near future

Then a configuration was presented to meet these demands the multimedia system of the CIM Learning Factory subsidised by the EC in the COMETT programme The CIM Learning Factory consists of a well operating model factory where activities like job management production control design manufacturing including loading material transport and assembly as well as quality control and warehousing are flexibly shown in functional models and are controlled by means of cross linked computers MPC during the training the cross linked computer structure is used like a language laboratory two different teachware packages the first for the target group of designers and decision makers the second for skilled workers and plant management

On Line and On Paper Kathryn Henderson,1998-12-01 The role of representation in the production of technoscientific knowledge has become a subject of great interest in recent years In this book sociologist and art critic Kathryn Henderson offers a new perspective on this topic by exploring the impact of computer graphic systems on the visual culture of engineering design Henderson shows how designers use drawings both to organize work and knowledge and to recruit and organize resources political support and power Henderson s analysis of the collective nature of knowledge in technical design work is based on her participant observation of practices in two industrial settings In one she follows the evolution of a turbine engine package from design to production and in the other she examines the development of an innovative surgical tool In both cases she describes the messy realities of design practice including the mixed use of the worlds of paper and computer graphics One of the goals of the book is to lay a practice informed groundwork for the creation of more usable computer tools Henderson also explores the relationship between the historical development of engineering as a profession and the standardization of engineering knowledge and then addresses the question Just what is high technology and how does it affect the extent to which people will allow their working habits to be disrupted and restructured Finally to help explain why visual representations are so powerful Henderson develops the concept of metaindexicality the ability of a visual representation used interactively to combine many diverse levels of knowledge and thus to serve as a meeting ground and sometimes battleground for many types of workers
